

- SAW Frequency Stabilization
- Fundamental-Mode Oscillation at 1030.0 MHz
- Ideal for IFF Transponder Applications

The frequency of this oscillator is stabilized by surface-acoustic-wave (SAW) technology. This results in excellent performance from a compact, rugged, oscillator operating at the fundamental frequency of 1030.0 MHz. The highly-reliable HO1080 is designed for use in identify-friend-or-foe (IFF) radar transponders in military aviation. Military Screening is available as an option. The HO1080 is a high-performance version of the HO1078 oscillator.

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling. COCOM CAUTION: Approval by the U.S. Department of Commerce is required prior to export of this device.

#### Notes:

- One or more of the following United States patents apply: 4,616,197; 4,610,681; and 4 761 616.
- Unless noted otherwise, all specifications are listed at T<sub>A</sub> = +25°C ±2°C, V<sub>CC</sub> = nominal voltage ±0.01 VDC, and load impedance = 50 Ω with VSWR ≤ 1.5:1.
- 3. The design, manufacturing process, and specifications of this device are subject to change without notice.
- Applies to oscillator only and not to sidebands caused by external electrical or mechanical sources. (Dedicated external voltage regulation with low-frequency filtering for the DC power supply and proper circuit board layout are recommended for optimum spectral purity.)
- For specified maximum operating load VSWR (any angle) at F<sub>O</sub>. (No instability or damage will occur for any passive load impedance.)
- 6. For any combination of V<sub>CC</sub> and T<sub>A</sub> within the specified operating ranges.
- 7. Applies for any combination of Note 5 and 6 conditions.
