Ordering number: EN 2641A

Monolithic Linear IC

SANYO No.2641A

LA5586

General-Purpose Compact DC Motor Speed Controller

Features

- Wide operating voltage range (3.8 to 16V)
- Possible to make the equipment compact because of minimum number of external parts required and small-sized package
- Easy to change the speed
- Easy to increase the power dissipation because of the use of a fin
- Various lead formings available for making the equipment compact
- On-chip protector against inverted connection of power supply

Maximum Ratings at Ta=25°C

				unit
Maximum Supply Voltage	V_{CC} max		18	V
Allowable Power Dissipation	Pd max	Ta=25°C	1.0*	W
Operating Temperature	Topr		-20 to +80	°C
Storage Temperature	Tstg		-40 to +150	°C
Start Current	Im max	3sec at SW-ON or lock mode	1.4	A

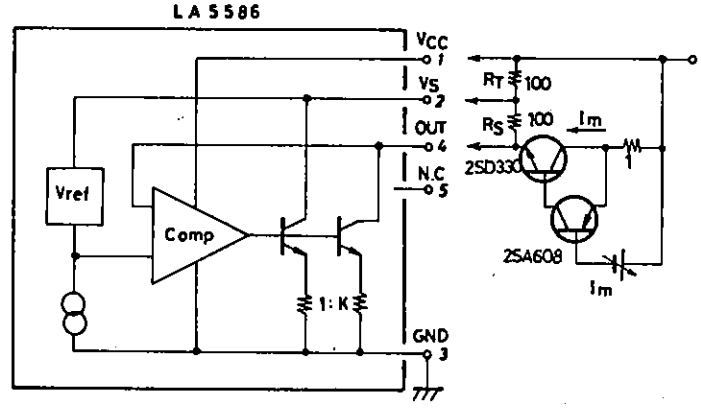
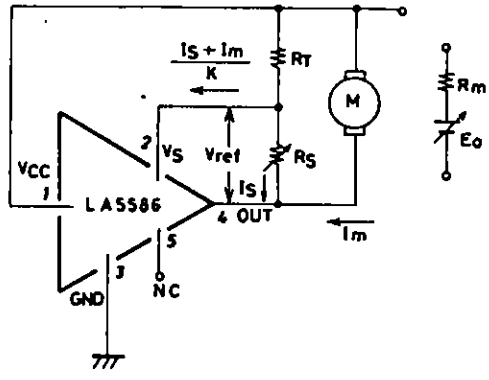
Equivalent Circuit and Test Circuit



Unit (resistance: Ω)

Sample Application Circuit



$$Im \cdot Rm + E_O = R_T\left(Is + \frac{Is+Im}{K}\right) + Vref$$

From this equation,

$$E_O = Vref + R_T\left(1+\frac{1}{K}\right)Is + \left(\frac{R_T}{K} - Rm\right)Im$$

Assuming $K \cdot Rm = R_T$
The number of revolutions is determined by

$$E_O = Vref + R_T\left(1+\frac{1}{K}\right)Is$$

Unless $R_m(max) < K \cdot Rm(min)$ in the Sample Application Circuit, the operation becomes unstable.
