## NTE927D & NTE927SM Integrated Circuit Differential Video Amplifier

### Description:

The NTE927D and NTE927SM are two-stage, differential input, differential output, wide-band video amplifiers. The use of internal series-shunt feedback gives wide band bandwidth with low phase distortion and high gain stability. Emitter-follower outputs provide a high current drive, low impedance capability. Its 120MHz bandwidth and selectable gains of 10, 100, and 400, without need for frequency compensation, make it a very useful circuit for memory element drivers, pulse amplifiers, and wide band gain stages.

### Features:

- 120MHz Bandwidth
- 250k $\Omega$  Input Resistance
- No Frequency Compensation Required
- Selectable Gains of 10, 100 and 400
- High Common Mode Rejection Ratio at High Frequencies

### Applications:

- Magnetic Tape Systems
- Disk File Memories
- Thin and Thick Film Memories
- Woven and Plated Wire Memories
- Wide Band Video Amplifiers

### Absolute Maximum Ratings:

Differential Input Voltage .....	$\pm 5V$
Common Mode Input Voltage .....	$\pm 6V$
Supply Voltage, $V_{CC}$ .....	$\pm 8V$
Output Current, $I_O$ .....	10mA
Power Dissipation (Note 1), $P_D$ .....	500mW
Junction Temperature, $T_J$ .....	+100°C
Storage Temperature Range, $T_{stg}$ .....	-65° to +150°C
Operating Temperature Range, $T_{opr}$ .....	0° to +70°C
Lead Temperature (Soldering, 10sec), $T_L$ .....	+260°C

Note 1. For operation at elevated temperatures, derate device based on a thermal resistance of +150°C/W junction to ambient or +45°C/W junction to case.

**Electrical Characteristics:** ( $T_A = +25^\circ\text{C}$ , unless otherwise specified,  $V_S = \pm 6\text{V}$ )

Parameter	Test Conditions	Min	Typ	Max	Unit
Differential Voltage Gain Gain 1 (Note 2) Gain 2 (Note 3) Gain 3 (Note 4)	$R_L = 2\text{k}\Omega$ , $V_{OUT} = 3\text{V}_{\text{p-p}}$	250 80 8.0	400 100 10	600 120 12
