

## 900-MHz ISM Band Receiver

### Description

The receiver IC U2762B-B is specifically designed for cordless telephone applications in the 900-MHz ISM band. It is manufactured using TEMIC's advanced UHF process. The IC consists of a 900-MHz RF amplifier and mixer, 10.7-MHz IF amplifier, limiter, RSSI, quadrature demodulator and comparator for the bit-slicer function. The device features 2.9-V operation. In conjunction with TEMIC's transmitter IC U2763B-B and the PLL

U2781B, a complete ISM RF IC kit is available which fits perfectly with AMD's PhoX controllers AM79C432A and AM79C433.

Electrostatic sensitive device.  
Observe precautions for handling.

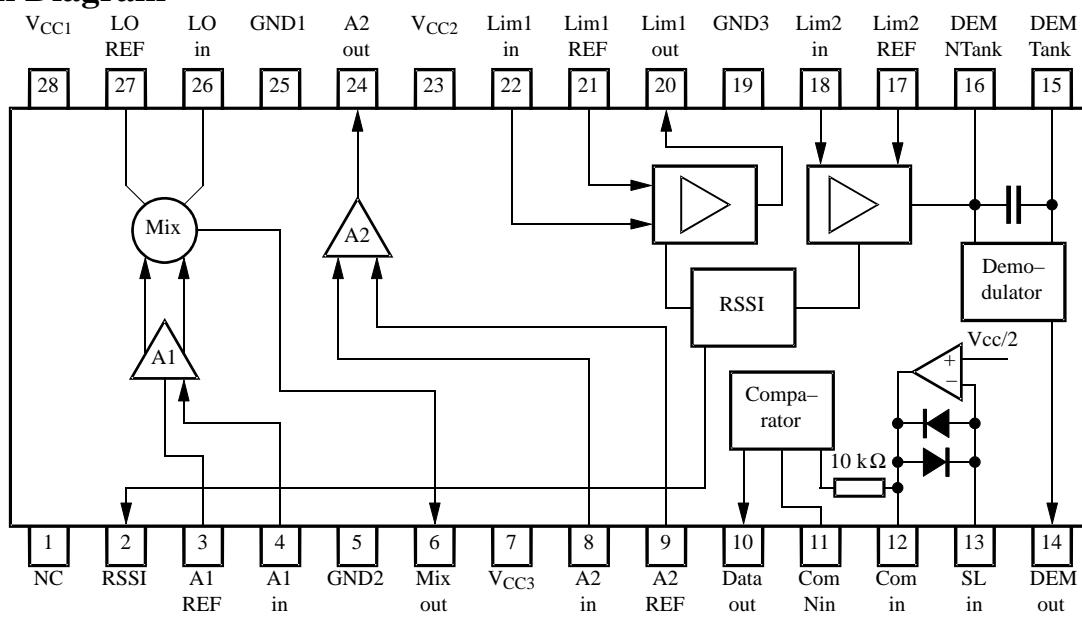

### Features

- Single-conversion receiver with 10.7-MHz IF
- Comparator for bit slicer integrated
- Temperature-compensated RSSI with 65 dB dynamic range
- Supply-voltage range 2.7 V to 3.3 V
- Only 17 mA typical current consumption
- Few external components
- SSO28 package

### Benefits

- Low filter costs due to 10.7-MHz single conversion
- Very low count of external components saves PCB space and costs
- Low current consumption results in very long stand-by time of approximately 7 days

### Ordering Information

Extended Type Number	Package	Remarks
U2762B-BFS	SSO28	Tubes, MOQ 600 pcs
U2762B-BFSG3	SSO28	Taped and reeled, MOQ 4000 pcs

## Pin Description

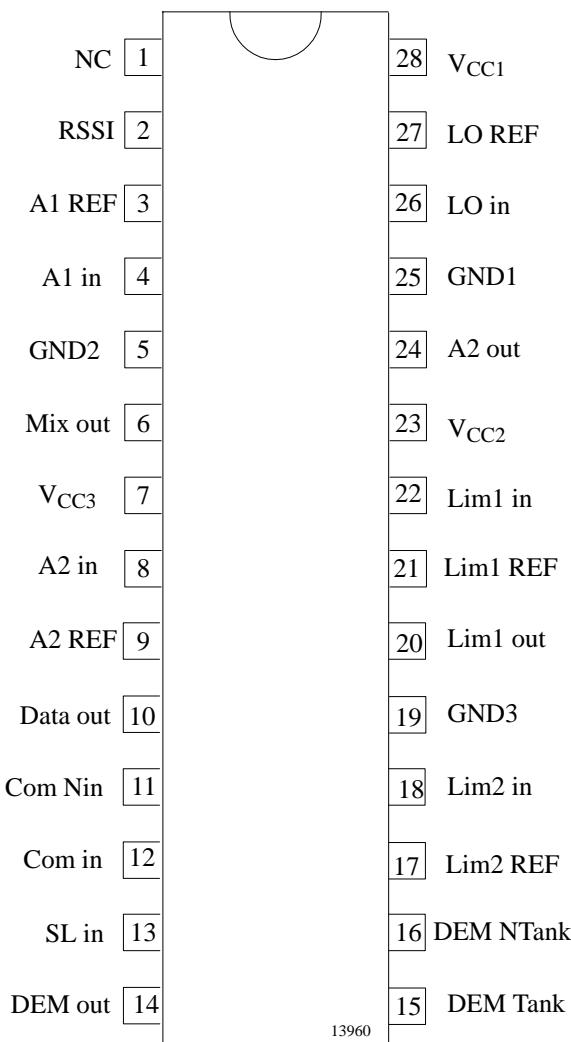

Figure 2. Pinning

Pin	Symbol	Function
1	NC	Not connected
2	RSSI	Signal-strength indicator
3	A1 REF	RF reference
4	A1 in	RF input
5	GND2	IF ground
6	Mix out	Mixer output
7	V <sub>CC3</sub>	IF and AF power supply
8	A2 in	IF amplifier A2 input
9	A2 REF	IF amplifier A2 reference
10	Data out	Data output
11	Com Nin	Comparator reference
12	Com in	Comparator input / slicer output
13	SL in	Slicer input
14	DEM out	Demodulator output
15	DEM Tank	Quadrature filter
16	DEM NTank	Quadrature filter
17	Lim2 REF	Limiter2 reference
18	Lim2 in	Limiter2 input
19	GND3	IF and AF Ground
20	Lim1 out	Limiter1 output
21	Lim1 REF	Limiter1 reference
22	Lim1 in	Limiter1 input
23	V <sub>CC2</sub>	IF power supply 1
24	A2 out	IF amplifier A2 output
25	GND1	RF ground
26	LO in	Local oscillator input
27	LO REF	Local oscillator reference
28	V <sub>CC1</sub>	RF power supply

## Functional Description

### RF Amplifier / Mixer

The RF amplifier / mixer down-converts the antenna signal to the IF frequency. It has asymmetrical RF and IF ports. The LO input includes an amplifier for good sensitivity and can be used in a symmetrical- as well as an asymmetrical configuration.

### IF Amplifier A2

An additional gain stage enables an application-specific insertion point for IF filtering.

### Limiter 1 / 2

The two-stage limiting amplifier is designed to be directly coupled to low-cost 10.7-MHz ceramic IF filters in front of each stage. The total dynamic range is 65 dB.

### Demodulator

The quadrature demodulator in the receiving path contains an internal 7-pF quadrature capacitor to couple the IF signal to the external tank providing the 90-degree phase shift. The tank may be either an LC-tank circuit or an alignment-free discrete ceramic resonator.

### Bit-Slicer Amplifier and Comparator

The bit-slicer limits the baseband signal. Furthermore it eliminates the DC-offset by an AC-coupled lowpass filter to the demodulator output. A second lowpass filter recovers the exact comparator threshold value of the bit-slicer's output. The time constants of both lowpass filters can be selected independently from each other to optimize power-up timing.

## Absolute Maximum Ratings

Parameters	Symbol	Value	Unit
Supply voltage	V <sub>CC</sub>	0 to 3.5	V
Input voltages	V <sub>in</sub>	0 to V <sub>CC</sub>	V
Input voltages	V <sub>in</sub>	0 to V <sub>CC</sub> - 1 V	V
Junction temperature	T <sub>j</sub>	125	°C
Storage temperature	T <sub>stg</sub>	-40 to +125	°C

## Thermal Resistance

Parameters	Symbol	Value	Unit
Junction ambient	R <sub>thJA</sub>	130	K/W

## Operating Range

Parameters	Symbol	Value	Unit
Supply voltage	V <sub>S</sub>	2.7 to 3.3	V
Ambient temperature	T <sub>amb</sub>	0 to 70	°C

## Electrical Characteristics Cascaded A1 and MX1

Temperature range: 0°C to 70°C

Parameters	Test Conditions / Pins	Symbol	Min.	Typ.	Max.	Unit

## Electrical Characteristics A2

Parameters	Test Conditions / Pins		Symbol	Min.	Typ.	Max.	Unit
A2 turn-on time			$t_{A2on}$		2.5		$\mu s$
IF input impedance	@ 10.7 MHz	Pin 8	$Z_{MX2in}$	260	330	400	$\Omega$
Input frequency			$f_{MX2in}$		10.7	22	MHz
Output frequency		Pin 24	$f_{MX2out}$		10.7	22	MHz
Gain	@ 10.7 MHz		$G_p$	8	10	12	dB
Noise figure			$N_F$		8		dB
1-dB compression point		Pin 8	$P_{1dB}$		95		$dB\mu V$
3rd-order intercept point		Pin 8	IIP3		112		$dB\mu V$
Output voltage @ 1 dB compression	@ 10.7 MHz	Pin 24	$P_{1dBout}$		104		$dB\mu V$
Output load	Single ended	Pin 24	$L_{MX2out}$	260	330	400	$\Omega$

## Common Electrical Characteristics IF/AF System

Parameters	Test Conditions / Pins		Symbol	Min.	Typ.	Max.	Unit
Supply-voltage range	Pins 7, 23		$V_7, V_{23}$	2.7	2.9	3.3	V
Supply current	Pin 7		$I_7$		4.9		mA
Supply current	Pin 23		$I_{23}$		6.0		mA

## Electrical Characteristics RSSI/Lim1 and Lim2

Parameters	Test Conditions / Pins		Symbol	Min.	Typ.	Max.	Unit
–3 dB limiting at Lim1 input	Valid for –5 dB insertion loss for 2nd IF filter Pin 22		$P_{3dB}$			8	$dB\mu V$
Lim1/Lim2 cascaded voltage gain	$f_{IF} = 10.7 \text{ MHz}$ , $P_{IFin} = -110 \text{ dBm}$		$G_{LIM12}$		110		dB
<b>Limiter 1</b>							
Lim1 input impedance	Pin 22	$Z_{LIM1in}$	260	330	400	$\Omega$	
Lim1 input frequency	Pin 22	$f_{LIM1BW}$	1		22	MHz	
Lim1 output impedance	Pin 22	$f_{LIM1out}$	260	330	400	$\Omega$	
Voltage gain		$G_{LIM1}$		45		dB	
<b>Limiter 2</b>							
Lim2 input impedance	Pin 18	$Z_{LIM2in}$	260	330	400	$\Omega$	
Lim2 input frequency	Pin 18	$f_{LIM2BW}$	1		22	MHz	
<b>RSSI</b>							
Dynamic range		$D_{RSSI}$	20		85		$dB\mu V$
Output voltage	@ 20 dB $\mu V$ @ 85 dB $\mu V$	$V_{out}$	0.1 1.7	0.2 1.8	0.3 1.9	V V	
RSSI fall time	Pin 2	$t_{fRSSI}$			50	$\mu s$	
RSSI rise time	Pin 2	$t_{rRSSI}$			50	$\mu s$	
Output impedance	Pin 2	$Z_{RSSI}$		10    3			$k\Omega    pF$

## Electrical Characteristics Demodulator

Parameters	Test Conditions / Pins	Symbol	Min.	Typ.	Max.	Unit
Demodulator 3 db BW	Pin 14	$f_{DEMODBW}$		200		kHz
Demodulator total harmonic distortion	$f_{mod} = 36 \text{ kHz}$ $f_{dev} = 40 \text{ kHz}$ $f_{IFin} = 10.7 \text{ MHz}$	Pin 14	THD	< 3		%
Demodulator output voltage	$f_{mod} = 36 \text{ kHz}$ $f_{dev} = 40 \text{ kHz}$ $f_{IFin} = 10.7 \text{ MHz}$	Pin 14	$V_{Dout}$	150		$\text{mV}_{\text{rms}}$
DC output voltage	Pin 14			1.5		V
Output load	Pin 14	$L_{Dout}$	10			kΩ

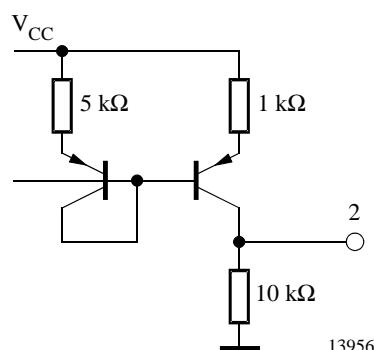

## Electrical Characteristics Comparator

Parameters	Test Conditions / Pins	Symbol	Min.	Typ.	Max.	Unit
Ref. input impedance	Pin 11	$Z_{COMPin}$		100		kΩ
Output voltage 'high'	$R_{LOAD} > 10 \text{ k}\Omega$	Pin 10	$V_{outH}$	$V_{CC} - 0.3$		V
Output voltage 'low'	$R_{LOAD} > 10 \text{ k}\Omega$	Pin 10	$V_{outL}$		0.3	V
Output low-to-high rise time	$R_{LOAD} = 10 \text{ k}\Omega$ $C_{LOAD} = 10 \text{ pF}$	Pin 10	$t_r$		500	ns
Output high-to-low fall time	$R_{LOAD} = 10 \text{ k}\Omega$ $C_{LOAD} = 10 \text{ pF}$	Pin 10	$t_f$		500	ns
Hysteresis	Pin 12	$V_{HYST}$		25		mV

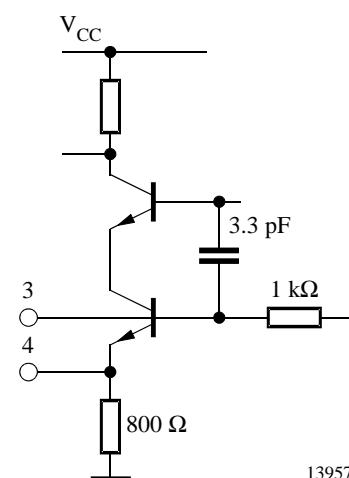

## Electrical Characteristics Slicer Amplifier

Parameters	Test Conditions / Pins	Symbol	Min.	Typ.	Max.	Unit
Open loop gain	Pin 13 to 12	$G_{Sol}$		40		dB
Output load	AC load	Pin 12	$L_{Sout}$	10		kΩ
Output swing		Pin 12		0.7		V

## Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC Semiconductor GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

**TEMIC Semiconductor GmbH** semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

**TEMIC Semiconductor GmbH** can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

### We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC products for any unintended or unauthorized application, the buyer shall indemnify TEMIC against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
