NEC

MOS INTEGRATED CIRCUIT
μPD23C64300

64M-BIT MASK-PROGRAMMABLE ROM
8M-WORD BY 8-BIT (BYTE MODE) / 4M-WORD BY 16-BIT (WORD MODE)

Description

The μPD23C64300 is a 67,108,864 bits mask-programmable ROM. The word organization is selectable (BYTE mode : 8,388,608 words by 8 bits, WORD mode : 4,194,304 words by 16 bits).

The active levels of OE (Output Enable Input) can be selected with mask-option.

The μPD23C64300 is packed in 48-pin TAPE FBGA.

Features

- Pin compatible with NOR Flash Memory
- Word organization
  - 8,388,608 words by 8 bits (BYTE mode)
  - 4,194,304 words by 16 bits (WORD mode)
- Operating supply voltage : V_{CC} = 2.7 V to 3.6 V

Operating supply voltage V_{CC}	Access time ns (MAX.)	Power supply current (Active mode) mA (MAX.)	Standby current (CMOS level input) μA (MAX.)
3.0 V ± 0.3 V	100	40	30
3.3 V ± 0.3 V	90	55	

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

2	O1	O9	O8	O0	A5	A6	A17	A7
1	GND	/OE or OE	/CE	A0	A1	A2	A4	A3

A0 to A21 : Address inputs
O0 to O7, O8 to O14 : Data outputs
O15, A–1 : Data output 15 (WORD mode),
LSB Address input (BYTE mode)
WORD, /BYTE : Mode select
/CE : Chip Enable
/OE or OE : Output Enable
V_{CC} : Supply voltage
GND : Ground
NC [Note] : No Connection
DC : Don't Care

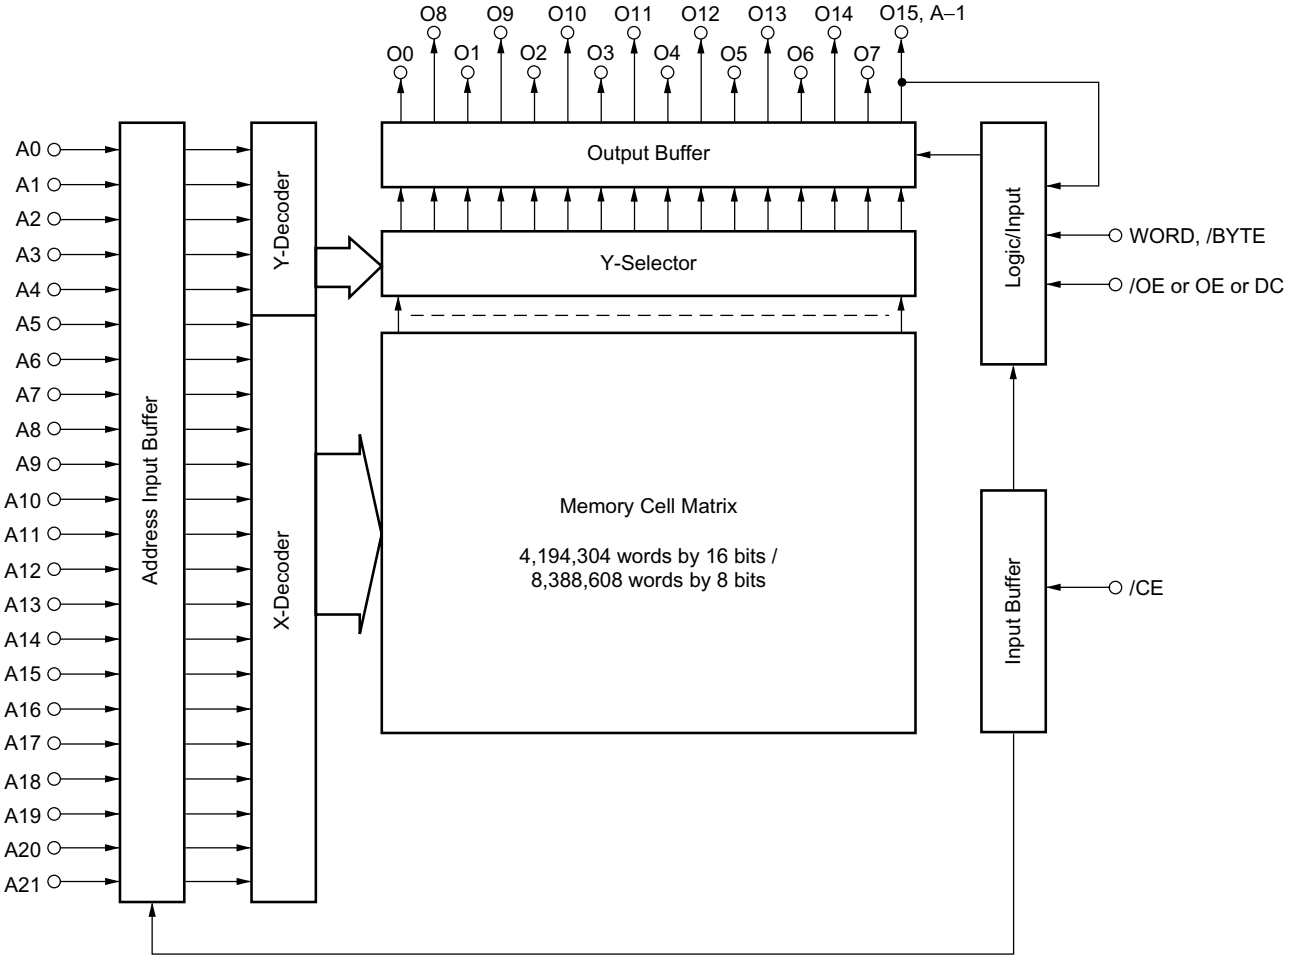
Note Some signals can be applied because this pin is not connected to the inside of the chip.

Remark Refer to **Package Drawing** for the index mark.

Input / Output Pin Functions

Pin name	Input / Output	Function
WORD, /BYTE	Input	The pin for switching WORD mode and BYTE mode. **High level** : WORD mode (4M-word by 16-bit) **Low level** : BYTE mode (8M-word by 8-bit)
A0 to A21 (Address inputs)	Input	Address input pins. A0 to A21 are used differently in the WORD mode and the BYTE mode. **WORD mode (4M-word by 16-bit)** A0 to A21 are used as 22 bits address signals. **BYTE mode (8M-word by 8-bit)** A0 to A21 are used as the upper 22 bits of total 23 bits of address signal. (The least significant bit (A–1) is combined to O15.)
O0 to O7, O8 to O14 (Data outputs)	Output	Data output pins. O0 to O7, O8 to O14 are used differently in the WORD mode and the BYTE mode. **WORD mode (4M-word by 16-bit)** The lower 15 bits of 16 bits data outputs to O0 to O14. (The most significant bit (O15) combined to A–1.) **BYTE mode (8M-word by 8-bit)** 8 bits data outputs to O0 to O7 and also O8 to O14 are high impedance.
O15, A–1 (Data output 15, LSB Address input)	Output, Input	O15, A–1 are used differently in the WORD mode and the BYTE mode. **WORD mode (4M-word by 16-bit)** The most significant output data bus (O15). **BYTE mode (8M-word by 8-bit)** The least significant address bus (A–1).
/CE (Chip Enable)	Input	Chip activating signal. When the OE is active, output states are following. **High level** : High-Z **Low level** : Data out
/OE or OE or DC (Output Enable, Don't care)	Input	Output enable signal. The active level of OE is mask option. The active level of OE can be selected from high active, low active and Don't care at order.
V_{CC}	–	Supply voltage
GND	–	Ground
NC	–	Not internally connected. (The signal can be connected.)

Block Diagram



Mask Option

The active levels of output enable pin (/OE or OE or DC) are mask programmable and optional, and can be selected from among " 0 " " 1 " " x " shown in the table below.

Option	/OE or OE or DC	OE active level
0	/OE	L
1	OE	H
x	DC	Don't care

Operation modes for each option are shown in the tables below.

Operation mode (Option : 0)

/CE	/OE	Mode	Output state
L	L	Active	Data out
	H		High-Z
H	H or L	Standby	High-Z

Operation mode (Option : 1)

/CE	OE	Mode	Output state
L	L	Active	High-Z
	H		Data out
H	H or L	Standby	High-Z

Operation mode (Option : x)

/CE	DC	Mode	Output state
L	H or L	Active	Data out
H	H or L	Standby	High-Z

Remark L : Low level input
H : High level input

Electrical Specifications

Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating	Unit
Supply voltage	V_{CC}		–0.3 to +4.6	V
Input voltage	V_I		–0.3 to V_{CC}+0.3	V
Output voltage	V_O		–0.3 to V_{CC}+0.3	V
Operating ambient temperature	T_A		–10 to +70	°C
Storage temperature	T_{stg}		–65 to +150	°C

Caution Exposing the device to stress above those listed in Absolute Maximum Ratings could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Capacitance (T_A = 25 °C)

Parameter	Symbol	Test condition	MIN.	TYP.	MAX.	Unit
Input capacitance	C_I	f = 1 MHz			10	pF
Output capacitance	C_O				12	pF

DC Characteristics (T_A = –10 to +70 °C, V_{CC} = 2.7 to 3.6 V)

Parameter	Symbol	Test conditions		MIN.	TYP.	MAX.	Unit
High level input voltage	V_{IH}			2.0		V_{CC} + 0.3	V
Low level input voltage	V_{IL}	V_{CC} = 3.0 V ± 0.3 V		–0.3		+0.5	V
		V_{CC} = 3.3 V ± 0.3 V		–0.3		+0.8	
High level output voltage	V_{OH}	I_{OH} = –100 μA		2.4			V
Low level output voltage	V_{OL}	I_{OL} = 2.1 mA				0.4	V
Input leakage current	I_{LI}	V_I = 0 V to V_{CC}		–10		+10	μA
Output leakage current	I_{LO}	V_O = 0 V to V_{CC}, Chip deselected		–10		+10	μA
Power supply current	I_{CC1}	/CE = V_{IL} (Active mode),	V_{CC} = 3.0 V ± 0.3 V			40	mA
		I_O = 0 mA	V_{CC} = 3.3 V ± 0.3 V			55	
Standby current	I_{CC3}	/CE = V_{CC} – 0.2 V (Standby mode)				30	μA

AC Characteristics (T_A = –10 to +70 °C, V_{CC} = 2.7 to 3.6 V)

Parameter	Symbol	Test condition	V_{CC} = 3.0 V ± 0.3 V			V_{CC} = 3.3 V ± 0.3 V			Unit
			MIN.	TYP.	MAX.	MIN.	TYP.	MAX.	
Address access time	t_{ACC}				100			90	ns
Address skew time	t_{SKEW}	**Note**			10			10	ns
Chip enable access time	t_{CE}				100			90	ns
Output enable access time	t_{OE}				25			25	ns
Output hold time	t_{OH}		0			0			ns
Output disable time	t_{DF}		0		25	0		25	ns
WORD, /BYTE access time	t_{WB}				100			90	ns

Note t_{SKEW} indicates the following three types of time depending on the condition.

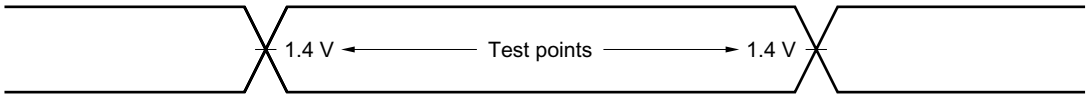
1) When switching /CE from high level to low level, t_{SKEW} is the time from the /CE low level input point until the next address is determined.
2) When switching /CE from low level to high level, t_{SKEW} is the time from the address change start point to the /CE high level input point.
3) When /CE is fixed to low level, t_{SKEW} is the time from the address change start point until the next address is determined.

Since specs are defined for t_{SKEW} only when /CE is active, t_{SKEW} is not subject to limitations when /CE is switched from high level to low level following address determination, or when the address is changed after /CE is switched from low level to high level.

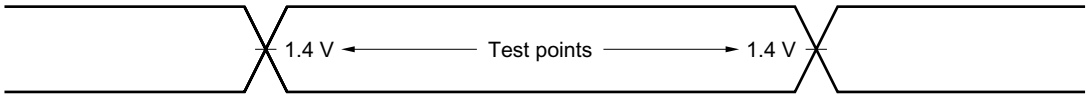
Remark t_{DF} is the time from inactivation of Chip Enable input (/CE) or Output Enable input (/OE or OE) to high impedance state output.

AC Test Conditions

Input waveform (Rise / Fall time ≤ 5 ns)



Output waveform



Output load

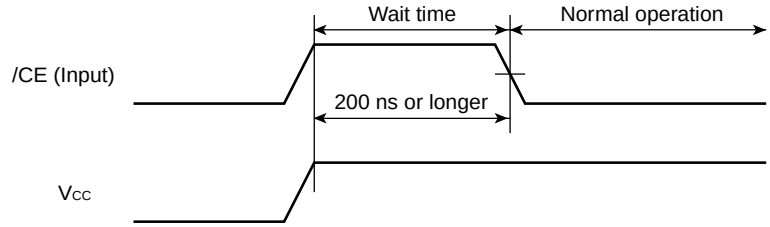
1TTL + 100 pF

Cautions on power application

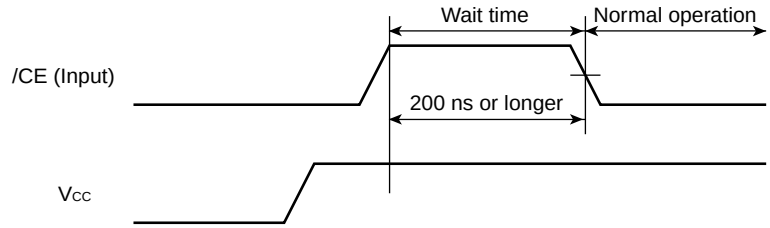
To ensure normal operation, always apply power using /CE following the procedure shown below.

1) Input a high level to /CE during and after power application.
2) Hold the high level input to /CE for 200 ns or longer (wait time).
3) Start normal operation after the wait time has elapsed.

Power Application Timing Chart 1 (When /CE is made high at power application)

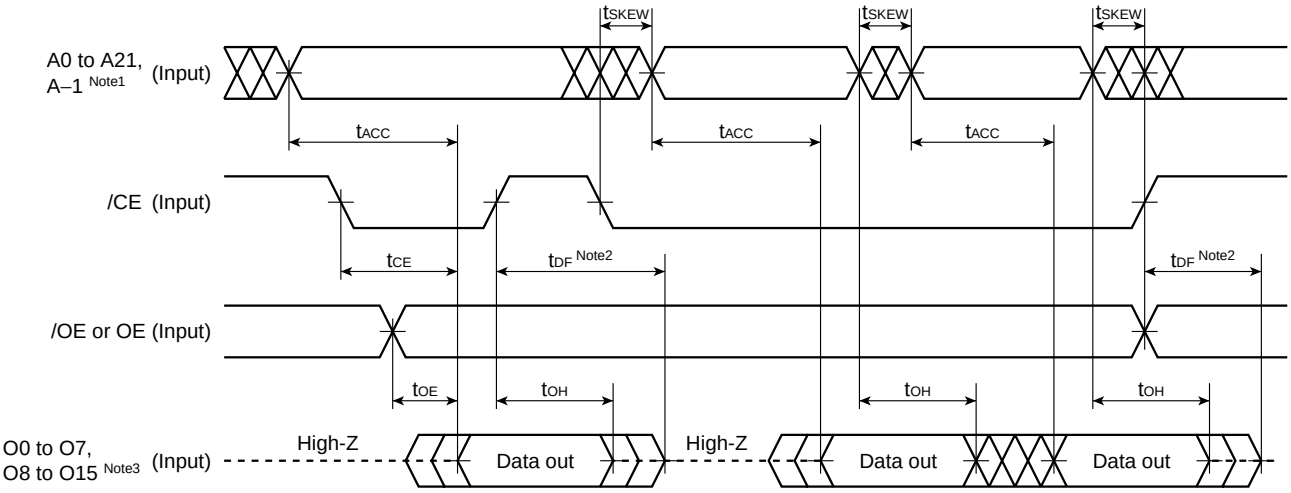


Power Application Timing Chart 2 (When /CE is made high after power application)



Caution Other signals can be either high or low during the wait time.

Read Cycle Timing Chart

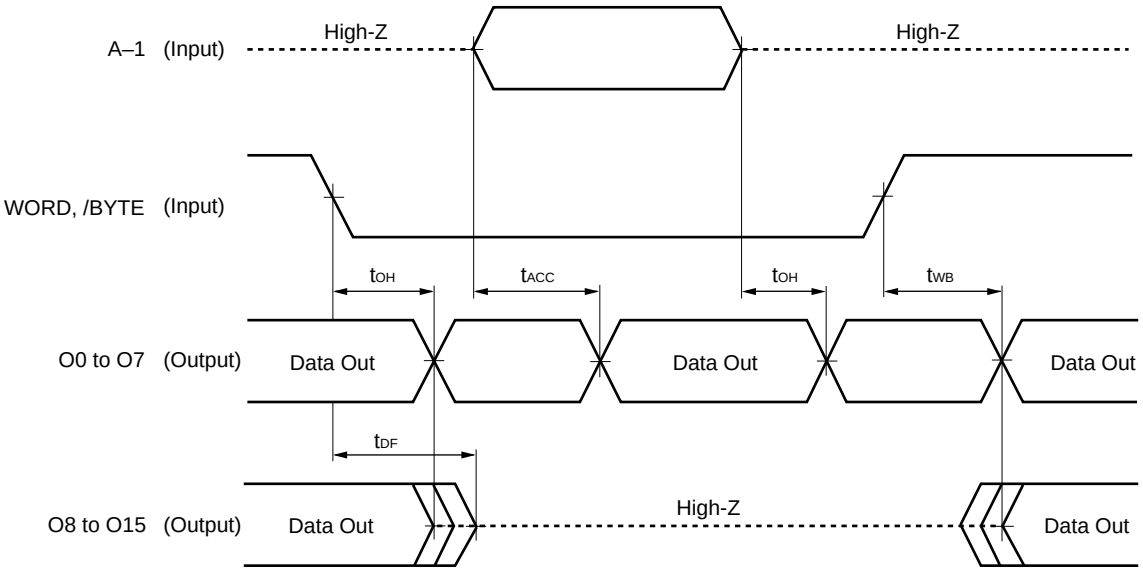


Notes 1. During WORD mode, A–1 is O15.

2. t_{DF} is the time from inactivation of Chip Enable input (/CE) or Output Enable input (/OE or OE) to high impedance state output.

3. During BYTE mode, O8 to O14 are high impedance and O15 is A–1.

WORD, /BYTE Switch Timing Chart



Remark Chip Enable (/CE) and Output Enable (/OE or OE) : Active.

NOTES FOR CMOS DEVICES

① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

These commodities, technology or software, must be exported in accordance with the export administration regulations of the exporting country. Diversion contrary to the law of that country is prohibited.

- **The information in this document is current as of July, 2004. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**
- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".
  The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.
  "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.
  "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).
  "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)
(1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
(2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
