Description

The Bel VRPF-15A1AC is part of the low cost non-isolated dc/dc converter. The module uses a SIP package for ease of layout and space savings. The output is closely regulated and can be trimmed from 1.2 V to 5.0 V. The efficiency is typically 92% at 5.0 V output at full load. Typical features include remote on/off, under-voltage lockout, over-current protection and short circuit protection.

Notes: All specifications are typical at 25 °C unless otherwise stated.

1. Power good delay time is the time from output voltage in full regulation to power good asserted.
2. The power good signal is an open collector output. When the output of the module reaches 90% of the nominal set point, the power good pin is set high.

Output Trim Equation

Equation for calculating the trim resistor (in kΩ) given the desired adjusted voltage (Vadj) is shown below. The Rset resistor should be connected between the Trim pin and GND.

$$V_{adj} = \left(\frac{0.992}{5.62K} + \frac{0.992}{R_{set}} \right) \cdot 1.18K + 0.992$$

Where, Vadj is the required voltage setpoint, Rset is the resistance required between TRIM and GND.

Power Good Signal Level Set

Equation for calculating the power good threshold (in kΩ) given the desired adjusted voltage (Vadj) is shown below. The PWRGD_SET resistor should be connected between the PWRGD_SET pin (Pin 9) and GND.

Output Voltage	PWRGD_THRESHOLD Set Resistor (1% tol)
5V	Short (Zero Ohm)
3.3V	1.78k
2.5V	4.22k
1.8V	11.8k
1.5V	26.1k
1.25V	169k
1.2V	Open (no resistor)

$$PWRGD_THRESHOLD = 6.19K \left(\frac{1.24}{2.21K + R_{set}} - 18.86 \cdot 10^{-6} \right) + 1.24$$

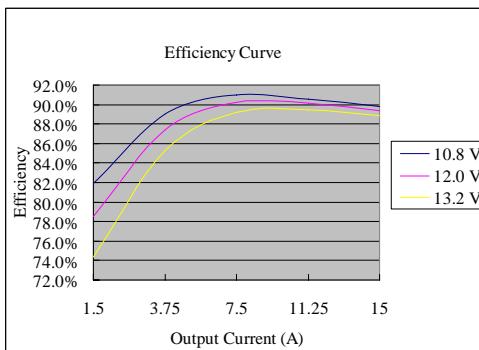

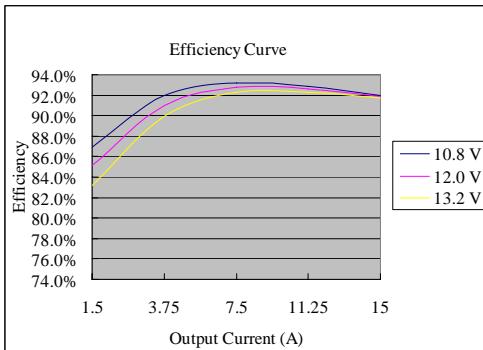

Where, Rset is the resistance required between PWRGD_SET and GND.
