

### 13 mm (1/2 Inch) Diameter, 9-stage, Side-on Type

The R6350 to R6358 series are compact side-on photomultiplier tubes with a 13 mm diameter and 50 mm height. Using different photocathode and window material combinations helped to produce a full product lineup to cover a wide spectral response range from the UV to the near infrared. This allows selecting the optimal tube to match your application and wavelength to be detected, the same as when selecting the popular 28 mm (1-1/8 inch) side-on tubes.

The R6356-06 and R6357 do not use an entrance mesh (grill) which is usually installed just inside the light input window. This eliminates the light loss caused by the entrance mesh, even if the size of incident light beam is small.

▲ Left: Fused silica window Center: UV window  
Right: Meshless type (R6356-06, R6357)

## APPLICATIONS

- Emission Spectroscopy (ICP, Direct Reader)
- Environmental Monitoring (NO<sub>x</sub>, SO<sub>2</sub>, etc.)
- Fluorescence Immunoassay
- Chemiluminescence Immunoassay
- Hygiene Monitor (Bio Luminescence)
- X-ray Phototimer
- Fluorometer
- Microscope (Laser Scanning Microscope)

## LENS FOR 1/2 INCH DIAMETER SIDE-ON TYPE PHOTOMULTIPLIER TUBES

The optimized cylindrical lens which can be attached at the entrance window of 1/2 inch side-on photomultiplier tube. This lens helps the incident light reaches the photocathode efficiently.

With this lens, the effective area widens by the factor of two in case of 1/2" PMT (7.5 mm width). The lens transmits above 300 nm light only.

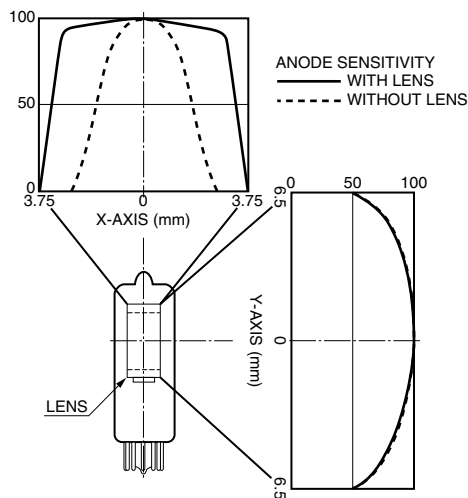

Figure 10: Transmittance of Lens

Lens Material: Acrylic resin

Figure 11: Uniformity

MEASUREMENT CONDITIONS  
WAVELENGTH: 400 nm  
SUPPLY VOLTAGE: -1000 V  
A 1 mm diameter spot light (parallel light) is scanned at the center of the photocathode in X and Y directions.

TPMSC0041EA

Figure 12: Lens Effect (Ex.: R6358)

### Parallel light:

Uniform and sufficiently large area, than the sensitive area size, of the parallel incident light (40 mm dia.) shall be given to the photomultiplier tube.

### Diffused light:

Parallel light (40 mm dia.) is given to the photomultiplier tube through the diffuser, which locates 10 cm from the tube.

**NOTE:** The lens only (without photomultiplier tube) is not available.

## ⚠ WARNING ~High Voltage~

The product is operated at high voltage potential. Further, the metal housing of the product is connected to the photocathode (potential) so that it becomes a high voltage potential when the product is operated at a negative high voltage (anode grounded).

Accordingly, extreme safety care must be taken for the electrical shock hazard to the operator or the damage to the other instruments.
