CMOS 8-Bit Microcontroller

TMP88PS38NG/FG

The TMP88PS38 is the high-speed and high performance 8-bit signal chip microcomputers which built in a program storage area (64 Kbytes), an OSD font storage area (24 Kbytes) and the one-time PROM of vector table storage area (256 bytes). The TMP88PS38 is pin compatible with the TMP88CS38. The operation possible with the TMP88PS38 can be performed by writing programs to PROM. The TMP88PS38 can write and verify in the same way as the TC571000D an EPROM programmer.

Operational Description

The configuration and function of the TMP88PS38 are the same as those of the TMP88CS38, except in that a one-time PROM is used instead of an on-chip mask ROM.

1. Operation Mode

The TMP88PS38 has two mode: MCU and PROM.

1.1 MCU Mode

The MCU mode is activated by fixing the TEST/VPP pin at low level.
In the MCU mode, operation is the same as with the TMP88CS38.

1.1.1 Program Memory

The TMP88PS38 has a 64 Kbytes (Addresses 04000H to 13EFFH in the MCU mode, addresses 10000H to 1FEFFH in the PROM mode) of program storage area, 24 Kbytes (Addresses 20000H to 25FFFH in the MCU mode, addresses 0A000H to 0FFFFH in the PROM mode) and 256 bytes (Addresses FFF00H to FFFFFH in the MCU mode, addresses 1FF00H to 1FFFFH in the PROM mode) one-time PROM of vector table storage area.

1.1.2 Data Memory

The TMP88PS38 has an on-chip 2-Kbyte data memory (Static RAM).

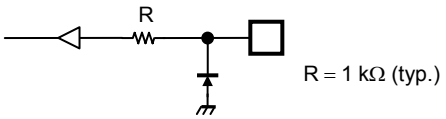
1.1.3 Input/Output Circuit for Pins

(1) Control pins

The TMP88PS38 is identical to the TMP88CS38 and TMP88CM38A/CP38A except that it has a TEST pin without a pull-down resistor.



Note: A pull-down resistor is not included.

Figure 1.1.2 TEST Pin

(2) I/O ports

The input/output circuit for the TMP88PS38 I/O port is the same as that for the TMP88CS38 and TMP88CM38A/CP38A.

1.2 PROM Mode

The PROM mode is used to write and verify programs with a general-purpose PROM programmer. The high-speed programming mode can be used for program operation.

The TMP88PS38 is not supported an electric signature mode, so the ROM type must be set to TC571000D.

1.3 Programming Flowchart (High-speed Programming Mode)

The high-speed programming mode is achieved by applying the program voltage (+12.75 V) to the VPP pin when Vcc = 6.25 V. After the address and input data are stable, the data is programmed by applying a single 0.1ms program pulse to the $\overline{\text{PGM}}$ input. The programmed data is verified. If incorrect, another 0.1ms program pulse is applied. This process should be repeated (up to 25 times) until the program operates correctly. After that, change the address and input data, and program as before. When programming has been completed, the data in all addresses should be verified with Vcc = Vpp = 5 V.

(1) Adapters

BM11174A: TMP88PS38N

BM11175A: TMP88PS38F

(2) PROM programmer specifying

i) PROM type is specified to TC571000D. (Note 1)

Writing voltage: 12.75 V (High-speed programming mode)

ii) Data transfer (copy) (Note 1)

In the TMP88PS38, EPROM is within the addresses 10000H to 1FEFFH (Program storage area) and 0A000H to 0FFFFH (OSD font area) and 1FF00H to 1FFFFH (Vector table storage area). Data is required to be transferred (Copied) to the addresses where it is possible to write. The program area in MCU mode and PROM mode is referred to "Program memory area" in Figure 1.1.

iii) Writing address is specified. (Note 1)

Start address:0A000H

End address: 1FFFFH

(3) Writing

Writing/Verifying is required to be executed in accordance with PROM programmer operating procedure.

Note 1: The specifying method is referred to the PROM programmer description. Either write the data FFH to the unused area or set the PROM programmer to access only the program storage area.

Note 2: When MCU is set to an adapter or the adapter is set to PROM programmer, a position of pin 1 must be adjusted. If the setting is reversed, MCU, the adapter and PROM program is damaged.

If the device is used under operating conditions other than the recommended operating conditions (Supply voltage, operating temperature range, specified AC/DC values etc.), malfunction may occur. Thus, when designing products which include this device, ensure that the recommended operating conditions for the device are always adhered to.

Note 2: Clock frequency fc: Supply voltage range is specified in NORMAL mode and IDLE mode.
