## RS1509

150KHz, 2A PWM Buck DC/DC Converter

## Description

The RS1509 is Monolithic IC that design for a step-down DC/DC Converter, and own the ability of driving a 2 A load without additional transistor component. The output version included $3.3 \mathrm{~V}, 5 \mathrm{~V}, 12 \mathrm{~V}$ and an adjustable type. It operates at a switching frequency of 150 KHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Other features include a guaranteed $\pm 4 \%$ tolerance on output voltage under specified input voltage and output load conditions, and $\pm 15 \%$ on the oscillator frequency. Regarding protected function, thermal shutdown is to prevent over temperature operating from damage, and current limit is against over current operating of the output switch.

8-Lead Plastic DIP-8 Package Code: P

8-Lead Plastic SOP-8 Package Code: S

## Features

- $3.3 \mathrm{~V}, 5 \mathrm{~V}, 12 \mathrm{~V}$ and adjustable
- Adjustable version output voltage range: 1.4-37V
$- \pm 4 \%$ max over line and load conditions
- $150 \mathrm{KHz} \pm 15 \%$ fixed switching frequency
- TTL shutdown capability
- Operating voltage can be up to 40 V
- Output load current: 2A
- SOP-8 and DIP-8 packages
- Low power standby mode
- Thermal-shuntdown and current-limit protection
- High efficiency
- Built-in switching a transistor on chip, requires only 4 external components

## Applications

- Simple High-efficiency step-down regulator
- Positive to negative converter
- On-card switching regulators

## Pin Connections

|  | Pin1: Operating Voltage Input | Pin5: Ground |
| :---: | :---: | :---: |
|  | Pin2: Switch Output | Pin6: Ground |
|  | Pin3: Output Voltage Feedback Control | Pin7: Ground |
|  | Pin4: ON/OFF Shutdown | Pin8: Ground |

## Pin Connections

## Absolute Maxium Rating ${ }^{\text {(Note1) }}$

| Parameter | Symbol | Value | Unit |
| :--- | :---: | :---: | :---: |
| Supply Voltage | $\mathrm{V}_{\mathrm{CC}}$ | 40 | V |
| On/Off Pin Input Voltage | $\mathrm{V}_{\mathrm{SD}}$ | $-0.3 \sim+25$ | V |
| Feedback Pin Voltage | $\mathrm{V}_{\mathrm{FB}}$ | $-0.3 \sim+25$ | V |
| Output Voltage to Ground | $\mathrm{V}_{\mathrm{OUT}}$ | -1 | V |
| Power Dissipation | $\mathrm{P}_{\mathrm{D}}$ | Internally Limited | W |
| Operating Temperature | $\mathrm{T}_{\text {opr }}$ | $0 \sim+70$ | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature | $\mathrm{T}_{\text {stg }}$ | $-65 \sim+150$ | ${ }^{\circ} \mathrm{C}$ |
| Operating Junction Temperature Range | $\mathrm{T}_{\mathrm{J}}$ | $-40 \sim+125$ | ${ }^{\circ} \mathrm{C}$ |
| Operating Voltage | $\mathrm{V}_{\mathrm{OP}}$ | $+4.5 \sim+40$ | V |

## Electrical Characteristics (Continued)

Specifications with boldface type apply over for full operating temperature range, the other type are for $\mathrm{T}_{\mathrm{J}}=25^{\circ} \mathrm{C}^{\text {(Note 2) }}$

| Part No. | Parameter | Symbol | Conditions | Min. | Typ. <br> (Note3) | Max. (Note4) | Unit |

|  | IIL | $\mathrm{V}_{\text {LOGIC }}=0.5 \mathrm{~V}$ (Regulator ON ) |  | - | -0.02 | -5 |  |

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics.
Note 2: External components such as the catch diode, inductor, input and output capacitors, and voltage programming resistors can affect switching regulator system performance.
Note 3: Typical numbers are at $25^{\circ} \mathrm{C}$ and represent the most likely norm.
Note 4: All limits guaranteed at room temperature (standard type face) and at temperature extremes (bold type face). All room temperature limits are $100 \%$ production tested. All limits at temperature extremes are guaranteed via correlation using standard Statistical Quality Control (SQC) methods. All limits are used to calculate Average Outgoing Quality Level (AOQL).
Note 5: The switching frequency is reduced when the second stage current limit is activated.
Note 6: No diode, inductor or capacitor connected to output pin.
Note 7: Feedback pin removed from output and connected to 0 V to force the output transistor switch ON.
Note 8: Feedback pin removed from output and connected to 12 V for the $3.3 \mathrm{~V}, 5 \mathrm{~V}$, ADJ. version, and 15 V for the 12 V version, to force the output transistor switch OFF.
Note 9: $\mathrm{V}_{\mathrm{IN}}=40 \mathrm{~V}$.
Note 10: Junction to ambient thermal resistance. (With copper area of approximately $3 \mathrm{in}^{2}$ )
