

SGM2006/A

Low Power, Low Dropout, 150mA, RF - Linear Regulators

GENERAL DESCRIPTION

The SGM2006/A series low-power, low-noise, low-dropout, CMOS linear voltage regulators operate from a 2.5V to 5.5V input and deliver up to 150mA. They are the perfect choice for low voltage, low power applications. An ultra low ground current (150 μ A at 150mA output) makes these part attractive for battery operated power systems. The SGM2006/A series also offer ultra low dropout voltage (150mV at 150mA output) to prolong battery life in portable electronics. Systems requiring a quiet voltage source, such as RF applications, will benefit from the SGM2006/A series' ultra low output noise (30 μ VRMS) and high PSRR. An external noise bypass capacitor connected to the device's BP pin can further reduce the noise level.

The output voltage is preset to voltages in the range of 1.5V to 5.0V. Other features include a 10nA logic-controlled shutdown mode, foldback current limit and thermal shutdown protection.

Devices come in 5-pin SOT23 package.

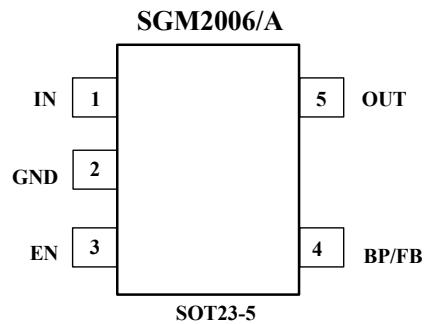

FEATURES

- **Low Output Noise:** 30 μ VRMS typ(10Hz to 100KHz)
- **Ultra-Low Dropout Voltage:**
150mV at 150mA output
- **Low 77 μ A No-Load Supply Current**
- **Low 150 μ A Operating Supply Current**
at 150mA Output
- **High PSRR:** 73dB at 1KHz
- **Thermal-Overload Protection**
- **Output Current Limit**
- **Preset Output Voltages ($\pm 2.7\%$ Accuracy)**
- **10nA Logic-Controlled Shutdown**
- **Available in Multiple Output Voltage Versions**
Fixed Outputs of 1.8V, 2.5V, 2.7V, 2.8V, 2.85V,
2.9V, 3.0V, 3.3V and 3.6V
Adjustable Output from 1.5V to 5.0V

APPLICATIONS

Cellular Telephones
Cordless Telephones
PHS Telephones
PCMCIA Cards
Modems
MP3 Player
Hand-Held Instruments
Palmtop Computers
Electronic Planners
Portable/Battery-Powered Equipment

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PIN DESCRIPTION

| PIN | NAME | FUNCTION |
|-----|------|---|
| 1 | IN | Regulator Input. Supply voltage can range from 2.5V to 5.5V. Bypass with a 1μF capacitor to GND. |
| 2 | GND | Ground. |
| 3 | EN | Shutdown Input. A logic low reduces the supply current to 10nA. Connect to IN for normal operation. |
| 4 | BP | Reference-Noise Bypass(fixed voltage version only). Bypass with a low-leakage 0.01μF ceramic capacitor for reduced noise at the output. |
| 4 | FB | Adjustable voltage version only—this is used to set the output voltage of the device. |
| 5 | OUT | Regulator Output. |

Specifications subject to change without notice.

Note 1: $V_{IN} = V_{OUT(NOMINAL)} + 0.5V$ or $2.5V$, whichever is greater.

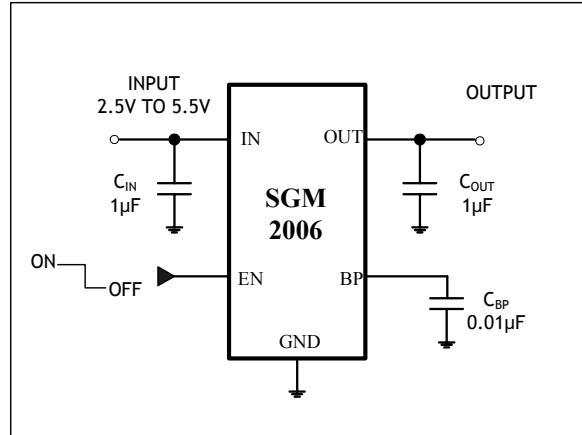

Note 2: The dropout voltage is defined as $V_{IN} - V_{OUT}$, when V_{OUT} is $100mV$ below the value of V_{OUT} for $V_{IN} = V_{OUT} + 0.5V$. (Only applicable for $V_{OUT} = +2.5V$ to $+5.0V$.)

Note 3: Time needed for V_{OUT} to reach 95% of final value.

Application Notes

When LDO is used in handheld products, Attention must be paid to voltage spike which would damage SGM2006. In such applications, voltage spike will be generated at charger interface and V_{BUS} pin of USB interface when charger adapters and USB equipments are hot-inserted. Besides this, handheld products will be tested on the production line on the condition of no battery. Test Engineer will apply power from the connector pin which connects with positive pole of the battery. When external power supply is turned on suddenly, the voltage spike will be generated at the battery connector. The voltage spike will be very high, it always exceeds the absolute maximum input voltage (6.0V) of LDO. In order to get robust design. Design Engineer needs to clear up this voltage spike. Zener diode is a cheap and effective solution to eliminate such voltage spike. For example, BZM55B5V6 is a 5.6V small package Zener diode which can be used to remove voltage spike in cell phone design. The schematic is shown in below:
