CMOS

F²MC-16LX MB90960 Series

MB90F962(S)/V340E-101/V340E-102

■ DESCRIPTION

The MB90960-series is a 16-bit general-purpose microcontroller. Fujitsu now offers on-chip Flash-ROM program memory up to 64 Kbytes.

The power supply (3 V) is supplied to the internal MCU core from an internal regulator circuit. This creates a major advantage in terms of EMI and power consumption.

The unit features a 4 channel input capture unit, 1 channel 16-bit free-run timer, 2-channel LIN-UART, and 16-channel 8/10-bit A/D converter as the peripheral resource.

Note : F²MC is the abbreviation of FUJITSU Flexible Microcontroller.

■ FEATURES

• Clock

- Built-in PLL clock frequency multiplying circuit
- Machine clock (PLL clock) selectable from frequency division by 2 of oscillation clock or 1 to 6-multiplied oscillation clock (4 MHz to 24 MHz when oscillation clock is 4 MHz) .
- Sub clock operation : Up to 50 kHz (devices without S-suffix only)
- Minimum instruction execution time : 42 ns (4 MHz oscillation clock and 6-multiplied PLL clock) .

(Continued)

Be sure to refer to the "Check Sheet" for the latest cautions on development.

"Check Sheet" is seen at the following support page

URL : <http://www.fujitsu.com/global/services/microelectronics/product/micom/support/index.html>

"Check Sheet" lists the minimal requirement items to be checked to prevent problems beforehand in system development.

MB90960 Series

- **Instruction system optimized controllers**
 - 16 Mbytes CPU memory space : Internal 24-bit addressing
 - Various data types (bit, byte, word, and long word)
 - Various addressing modes (23 types)
 - Enhanced signed instructions of multiplication/division and RETI
 - Enhanced high-accuracy operations by 32-bit accumulator
- **Instruction system for high-level language (C language) / multitask**
 - System stack pointer
 - Enhanced pointer indirect instructions
 - Barrel shift instructions
- **Higher execution speed**
 - 4-byte instruction queue
- **Powerful interrupt function**
 - Powerful interrupt function with 8 levels and 34 factors
 - Corresponds to 8-channel external interrupt
- **CPU-independent automatic data transfer function**
 - Expanded intelligent I/O service function (EI²OS) : Maximum 16 channels
- **Low-power consumption mode**
 - Clock mode
 - PLL clock mode (a PLL clock that is a multiple of the oscillation clock is used to operate the CPU and peripheral functions.)
 - Main clock mode (the main clock, with the oscillation clock frequency divided by 2 is used to operate the CPU and peripheral functions.)
 - Sub clock mode (the sub clock is used to operate the CPU and peripheral functions.)
 - Standby mode
 - Sleep mode (stops the operation clock to the CPU.)
 - Watch mode (operates the sub clock and watch timer only.)
 - Time-base timer mode (operates the oscillation clock, sub clock, time-base timer and watch timer only.)
 - Stop mode (stops the operates the oscillation clock and sub clock.)
 - CPU intermittent operation mode
- **I/O port**
 - General-purpose input/output ports (CMOS output)
 - 34 ports (products without S-suffix)
 - 36 ports (products with S-suffix)
- **Sub clock pin (X0A, X1A)**
 - Yes : (external oscillator used), products without S-suffix
 - No : products with S-suffix
- **Timer**
 - Time-base timer, watch timer (products without S-suffix), watchdog timer : 1 channel
 - 8/16-bit PPG timer : 8-bit × 4 channels or 16-bit × 2 channels
 - 16-bit reload timer : 2 channels
 - 16-bit input/output timer
 - 16-bit free-run timer : 1 channel
 - 16-bit input capture (ICU) : 4 channels

(Continued)

(Continued)

- **LIN-UART (LIN/SCI) : Maximum 2 channels**
 - Full-duplex double buffer
 - Clock-asynchronous or clock-synchronous serial transfer
- **DTP/External interrupt : 8 channels**
 - Module for activation of expanded intelligent I/O service (EI²OS) and generation of external interrupt by external input.
- **Delayed interrupt generator module**
 - Generates interrupt request for task switching.
- **8/10-bit A/D converter : 16 channels**
 - 8-bit and 10-bit resolution.
 - Start by external trigger input.
 - Conversion time : 3 μ s (frequency, including sampling time at 24 MHz machine clock)
- **Program patch function**
 - Detects address match for 6 address pointers.
- **Changeable port input voltage level**
 - Automotive input level/CMOS Schmitt input level (initial value in single-chip mode is Automotive level).

MB90960 Series

■ PRODUCT LINEUP

Part number	MB90F962	MB90F962S	MB90V340E-101	MB90V340E-102
Type	Flash memory product		Evaluation product	
CPU	F ² MC-16LX CPU			
System clock	PLL clock multiplier (× 1, × 2, × 3, × 4, × 6, 1/2 when PLL stops) Minimum instruction execution time : 42 ns (4 MHz oscillation clock, PLL × 6)			
ROM	Flash memory 64 Kbytes (60 Kbytes + 4 Kbytes Sectors)		External	
RAM capacitance	3 Kbytes		30 Kbytes	
Power supply for emulator*1	—		Yes	
Sub clock pin (X0A, X1A)	Yes	No		Yes
Operating voltage range	3.5 V to 5.5 V : at normal operation (not using A/D converter and not doing flash programming) 4.0 V to 5.5 V : at normal operation		5 V ± 10%	
Operating temperature range	− 40 °C to + 125°C *2		—	
Package	LQFP-48P		PGA-299C	
LIN-UART	2 channels		5 channels	
	Wide range of baud rate settings using a dedicated reload timer Special synchronous options for adapting to different synchronous serial protocols LIN functionality working either as master or slave LIN device			
8/10-bit A/D Converter	16 channels		24 channels	
	10-bit or 8-bit resolution Conversion time: Min. 3 μs includes sample time (per one channel)			
16-bit Reload Timer	2 channels		4 channels	
	Operation clock frequency: $f_{sys}/2^1$, $f_{sys}/2^3$, $f_{sys}/2^5$ (f_{sys} = Machine clock frequency) Supports External Event Count function			
16-bit I/O Timer	1 channel		4 channels	
	Signals an interrupt when overflowing. Operating clock frequency: $f_{sys}/2^1$, $f_{sys}/2^2$, $f_{sys}/2^3$, $f_{sys}/2^4$, $f_{sys}/2^5$, $f_{sys}/2^6$, $f_{sys}/2^7$ (f_{sys} = Machine clock frequency)			
16-bit Input Capture	4 channels		6 channels	
	Maintains I/O timer value by pin input (rising edge, falling edge, or both edge), and generates interrupt

MB90960 Series

(Continued)

Part number	MB90F962	MB90F962S	MB90V340E-101	MB90V340E-102
8/16-bit PPG timer	2 channels (16-bit) / 4 channels (8-bit) 8-bit reload counters × 4 8-bit reload registers for "L" pulse width × 4 8-bit reload registers for "H" pulse width × 4		8 channels (16-bit) / 16 channels (8-bit) 8-bit reload counters × 16 8-bit reload registers for "L" pulse width × 16 8-bit reload registers for "H" pulse width × 16	
	Supports 8-bit and 16-bit operation modes. A pair of 8-bit reload counters can be configured as one 16-bit reload counter or as 8-bit prescaler + 8-bit reload counter. Operating clock frequency: f_{sys} , $f_{sys}/2^1$, $f_{sys}/2^2$, $f_{sys}/2^3$, $f_{sys}/2^4$, or 128 μ s @ $f_{osc} = 4$ MHz (f_{sys} = Machine clock frequency, f_{osc} = Oscillation clock frequency)			
External Interrupts	8 channels Can be used rising edge, falling edge, starting up by "H"/"L" level input, external input, extended intelligent I/O services (EI ² OS) and DMA.			
Corresponding evaluation product	MB90V340E-102	MB90V340E-101	—	

*1 : It is setting of Jumper switch (TOOL V_{CC}) when emulator (MB2147-01) is used. Please refer to the Emulator hardware manual for the details.

*2 : If used exceeding $T_A = +105^\circ\text{C}$, be sure to contact Fujitsu for reliability limitations.

MB90960 Series

■ PIN ASSIGNMENT

• MB90F962(S)

■ PIN DESCRIPTION

Pin No.	Pin name	Circuit type	Function
LQFP-48P*			
1	AV _{CC}	I	V _{CC} power input pin for analog circuit.
2	AVR	—	Power (V _{ref+}) input pin for A/D converter. AVR should not exceed V _{CC} .
3 to 8	P60 to P65	H	General-purpose I/O ports.
	AN0 to AN5		Analog input pins for A/D converter.
9, 10	P66, P67	H	General-purpose I/O ports.
	AN6, AN7		Analog input pins for A/D converter.
	PPGC (D) , PPGE (F)		Output pins for PPG.
11	P80	F	General-purpose I/O port.
	ADTG		Trigger input pin for A/D converter.
	INT12R		External interrupt request input pin for INT12R.
12 to 14	P50 to P52	H	General-purpose I/O ports (I/O circuit type of P50 is different from that of MB90V340E) .
	AN8 to AN10		Analog input pins for A/D converter.
15	P53	H	General-purpose I/O port.
	AN11		Analog input pin for A/D converter.
	TIN3		Event input pin for reload timer 3.
16	P54	H	General-purpose I/O port.
	AN12		Analog input pin for A/D converter.
	TOT3		Output pin for reload timer 3.
	INT8		External interrupt request input pin for INT8.
17 to 19	P55 to P57	H	General-purpose I/O ports.
	AN13 to AN15		Analog input pins for A/D converter.
	INT10, INT11, INT13		External interrupt request input pins for INT10, INT11, INT13.
20	MD2	D	Input pin for selecting operation mode.
21, 22	MD1, MD0	C	Input pins for selecting operation mode.
23	\overline{RST}	E	Reset input.
24	V _{CC}	—	Power input pin (3.5 V to 5.5 V) .
25	V _{SS}	—	Power input pin (0 V) .
26	C	I	Capacity pin for stabilizing power supply. It should be connected to a higher than or equal to 0.1 μF ceramic capacitor.
27	X0	A	Oscillation input pin.
28	X1		Oscillation output pin.

(Continued)

MB90960 Series

Pin No.	Pin name	Circuit type	Function
29 to 32	P27 to P24	G	General-purpose I/O ports. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	IN3 to IN0		Event input pins for input capture 0 to 3.
33, 34	P23, P22	G	General-purpose I/O ports. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
	PPGF (E) , PPGD (C)		Output pins for PPG.
35, 36	P21, P20	G	General-purpose I/O ports. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
37	P85	K	General-purpose I/O port.
	SIN1		Serial data input pin for LIN-UART1.
38	P87	F	General-purpose I/O port.
	SCK1		Clock I/O pin for LIN-UART1.
39	P86	F	General-purpose I/O port.
	SOT1		Serial data output pin for LIN-UART1.
40	P43	F	General-purpose I/O port.
41	P42	F	General-purpose I/O port.
	INT9R		External interrupt request input pin for INT9R.
42	P83	F	General-purpose I/O port.
	SOT0		Serial data output pin for LIN-UART0.
	TOT2		Output pin for reload timer 2
43	P84	F	General-purpose I/O port.
	SCK0		Clock I/O pin for LIN-UART0.
	INT15R		External interrupt request input pin for INT15R.
44	P82	K	General-purpose I/O port.
	SIN0		Serial data input pin for LIN-UART0.
	INT14R		External interrupt request input pin for INT14R.
	TIN2		Event input pin for reload timer 2.
45	P44	F	General-purpose I/O port (I/O circuit type of P44 is different from that of MB90V340E) .
	FRCK0		Free-run timer 0 clock input pin.

■ HANDLING DEVICES

Special care is required for the following when handling the device :

- Preventing latch-up
- Treatment of unused pins
- Using external clock
- Notes on during operation of PLL clock mode
- Power supply pins (V_{CC}/V_{SS})
- Pull-up/down resistors
- Crystal oscillator circuit
- Turning-on sequence of power supply to A/D converter and analog inputs
- Connection of unused pins of A/D converter
- Notes on energization
- Stabilization of power supply voltage
- Initialization
- Correspondence with +105 °C or more

1. Preventing latch-up

CMOS IC chips may suffer latch-up under the following conditions :

- A voltage higher than V_{CC} or lower than V_{SS} is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between V_{CC} and V_{SS} .
- The AV_{CC} power supply is applied before the V_{CC} voltage.

Latch-up may increase the power supply current drastically, causing thermal damage to the device.

When used, note that maximum rated voltage is not exceeded.

For the same reason, also be careful not to let the analog power-supply voltage (AV_{CC} , AVR) exceed the digital power-supply voltage.

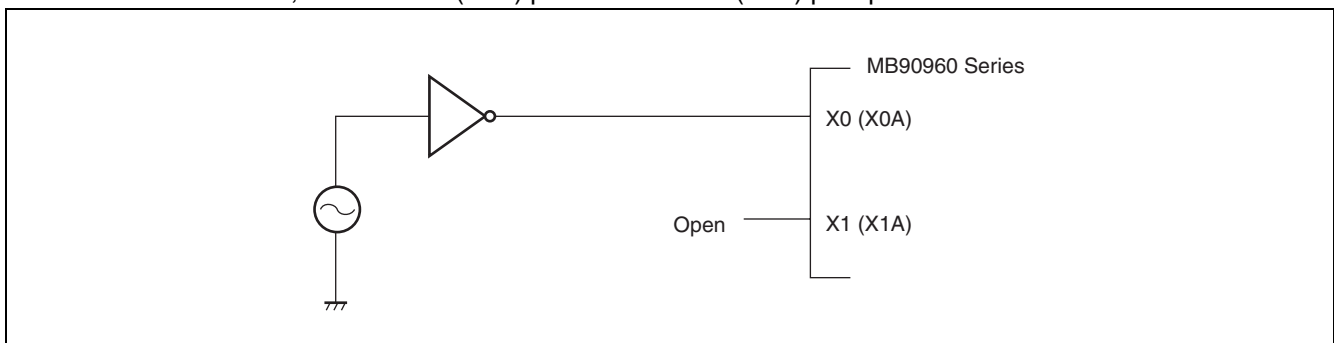

2. Treatment of unused pins

Leaving unused input pins open may result in misbehavior or latch-up and possible permanent damage of the device. Therefore, they must be pulled up or pulled down through resistors. In this case, those resistors should be more than 2 k Ω .

Unused bidirectional pins should be set to the output state and can be left open, or the input state with the above described connection.

3. Using external clock

To use external clock, drive the X0 (X0A) pin and leave X1 (X1A) pin open.

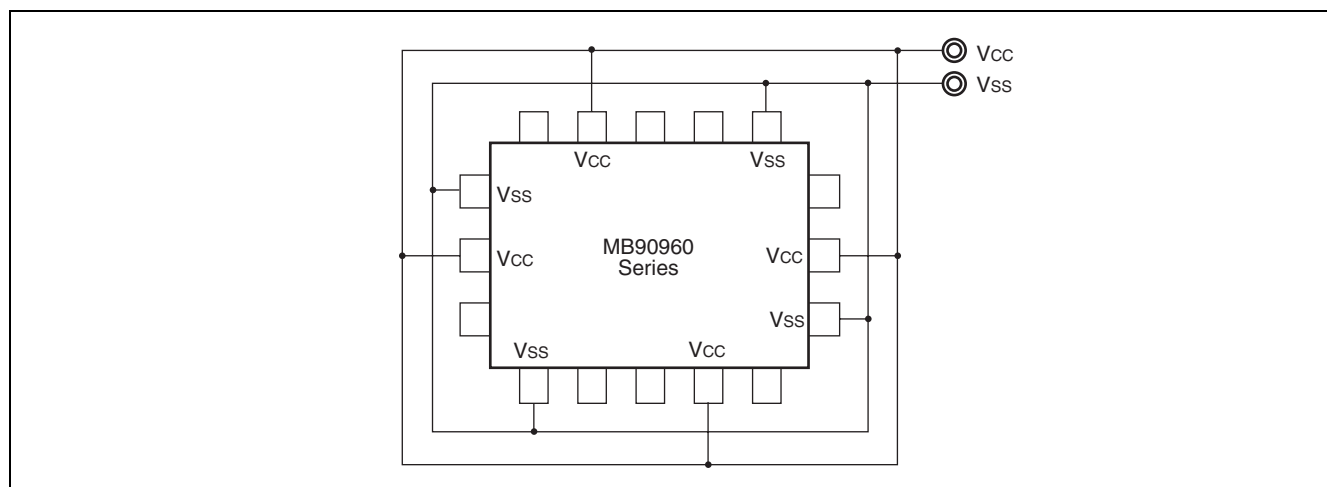

MB90960 Series

4. Notes on during operation of PLL clock mode

On this microcontroller, if in case the crystal oscillator breaks off or an external reference clock input stops while the PLL clock mode is selected, a self-oscillator circuit contained in the PLL may continue its operation at its self-running frequency. However, Fujitsu will not guarantee results of operations if such failure occurs.

5. Power supply pins (V_{CC}/V_{SS})

- If there are multiple V_{CC} and V_{SS} pins, from the point of view of device design, pins to be of the same potential are connected the inside of the device to prevent such malfunctioning as latch-up. To reduce unnecessary radiation, prevent malfunctioning of the strobe signal due to the rise of ground level, and to keep the recommended DC characteristics specified as the total output current, be sure to connect the V_{CC} and V_{SS} pins to the power supply and ground externally.
- Connect V_{CC} and V_{SS} to the device from the power supply source with lowest possible impedance.
- It is recommended to connect a capacitor of about $0.1 \mu\text{F}$ as a bypass capacitor between V_{CC} and V_{SS} in the vicinity of V_{CC} and V_{SS} pins of the device.

6. Pull-up/down resistors

The MB90960 series does not support internal pull-up/down resistors (except Port 2 : programmable pull-up resistors) . Use pull-up/down handling where needed.

7. Crystal oscillator circuit

Noises around X0 or X1 pins may be possible causes of abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure, to the utmost effort, that lines of oscillation circuit do not cross the lines of other circuits. It is highly recommended to provide a printed circuit board artwork surrounding X0 and X1 pins with a ground area for stabilizing the operation.

8. Turning-on sequence of power supply to A/D converter and analog inputs

Make sure to turn on the A/D converter power supply (AV_{CC} , AVR) and analog inputs ($AN0$ to $AN15$) after turning-on the digital power supply (V_{CC}) . Turn-off the digital power supply after turning off the A/D converter power supply and analog inputs. In this case, make sure that the voltage does not exceed AVR or AV_{CC} (turning on/off the analog and digital power supplies simultaneously is acceptable) .

9. Connection of unused pins of A/D converter if A/D converter is not used

Connect unused pins of A/D converter to $AV_{CC} = V_{CC}$, $AV_{SS} = AVR = V_{SS}$.

10. Notes on energization

To prevent malfunction of the internal voltage regulator, supply voltage profile while turning on the power supply should be slower than 50 μ s (0.2 V to 2.7 V).

11. Stabilization of power supply voltage

If the power supply voltage varies acutely even within the operation assurance range of the V_{CC} power supply voltage, a malfunction may occur. The V_{CC} power supply voltage must therefore be stabilized. As stabilization guide lines, stabilize the power supply voltage so that V_{CC} ripple fluctuations (peak to peak value) in the commercial frequencies (50 Hz/60 Hz) fall within 10% of the standard V_{CC} power supply voltage and the transient fluctuation rate becomes 0.1 V/ms or less in instantaneous fluctuation for power supply switching.

12. Initialization

In the device, there are internal registers which are initialized only by a power-on reset. To initialize these registers, turn on the power again.

13. Correspondence with +105 °C or more

If used exceeding $T_A = +105$ °C, please contact Fujitsu for reliability limitations.

MEMORY MAP

Note : The high-order portion of bank 00 gives the image of the FF bank ROM to make the small model of the C compiler effective. Since the low-order 16 bits are the same, the table in ROM can be referred without using the far specification in the pointer declaration.

For example, an attempt to access 00C000H accesses the value at FFC000H in ROM.

The ROM area in bank FF exceeds 32 Kbytes, and its entire image cannot be shown in bank 00.

The image between FF8000H and FFFFFFFH is visible in bank 00, while the image between FF0000H and FF7FFFH is visible only in bank FF.

Y1 : Usable

Y2 : Usable, with EI²OS stop function

N : Unusable

- Notes :
- The peripheral resources sharing the ICR register have the same interrupt level.
 - When 2 peripheral resources share the ICR register, only one can use extended intelligent I/O service at a time.
 - When either of the 2 peripheral resources sharing the ICR register specifies extended intelligent I/O service, the other one cannot use interrupts.

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	V_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
	AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} = AV_{CC}$ *2
	AVR	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$AV_{CC} \geq AVR$ *2
Input voltage*1	V_I	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Output voltage*1	V_O	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*3
Maximum clamp current	I_{CLAMP}	-2.0	+2.0	mA	*4
Total Maximum clamp current	$\Sigma I_{CLAMP} $	—	40	mA	*4
“L” level maximum output current	I_{OL}	—	15	mA	*4
“L” level average output current	I_{OLAV}	—	4	mA	*4
“L” level maximum overall output current	ΣI_{OL}	—	125	mA	*4
“L” level average overall output current	ΣI_{OLAV}	—	40	mA	*4
“H” level maximum output current	I_{OH}	—	-15	mA	*4
“H” level average output current	I_{OHAV}	—	-4	mA	*4
“H” level maximum overall output current	ΣI_{OH}	—	-125	mA	*4
“H” level average overall output current	ΣI_{OHAV}	—	-40	mA	*4
Power consumption	P_D	—	300	mW	
Operating temperature	T_A	-40	+105	°C	
		-40	+125	°C	*5
Storage temperature	T_{STG}	-55	+150	°C	

(Continued)

MB90960 Series

(Continued)

- *1 : This parameter is based on $V_{SS} = AV_{SS} = 0$ V.
- *2 : Set AV_{CC} and V_{CC} to the same voltage. Make sure that AV_{CC} does not exceed V_{CC} and that the voltage at the analog inputs does not exceed AV_{CC} when the power is switched on.
- *3 : V_I and V_O should not exceed $V_{CC} + 0.3$ V. V_I should not exceed the specified ratings. However, if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supersedes the V_I rating.
- *4 : Applicable to pins : P20 to P27, P40 to P44, P50 to P57, P60 to P67, P80, P82 to P87
- *5 : If used exceeding $T_A = +105^\circ\text{C}$, be sure to contact Fujitsu for reliability limitations.
 - Use within recommended operating conditions.
 - Use at DC voltage (current) .
 - The +B signal should always be applied a limiting resistance placed between the +B signal and the microcontroller.
 - The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
 - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this may affect other devices.
 - Note that if a +B signal is inputted when the microcontroller power supply is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.
 - Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting power supply voltage may not be sufficient to operate the power-on reset.
 - Care must be taken not to leave the +B input pin open.
 - Sample recommended circuits :

• Input/output equivalent circuits

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Conditions

($V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	V_{CC}, AV_{CC}	4.0	5.0	5.5	V	Under normal operation
		3.5	5.0	5.5	V	Under normal operation when not using the A/D converter and not Flash programming.
		3.0	—	5.5	V	Maintains RAM data in stop mode
Smooth capacitor	C_S	0.1	—	1.0	μF	Use a ceramic capacitor or capacitor of better AC characteristics for the C pin. Bypass capacitor at the V_{CC} pin should be greater than this capacitor.
Operating temperature	T_A	-40	—	+105	$^{\circ}\text{C}$	
		-40	—	+125	$^{\circ}\text{C}$	*

* : If used exceeding $T_A = +105\text{ }^{\circ}\text{C}$, please contact Fujitsu for reliability limitations.

• C Pin Connection Diagram

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

*: If used exceeding $T_A = +105\text{ }^\circ\text{C}$, please contact Fujitsu for reliability limitations.

• Clock Timing

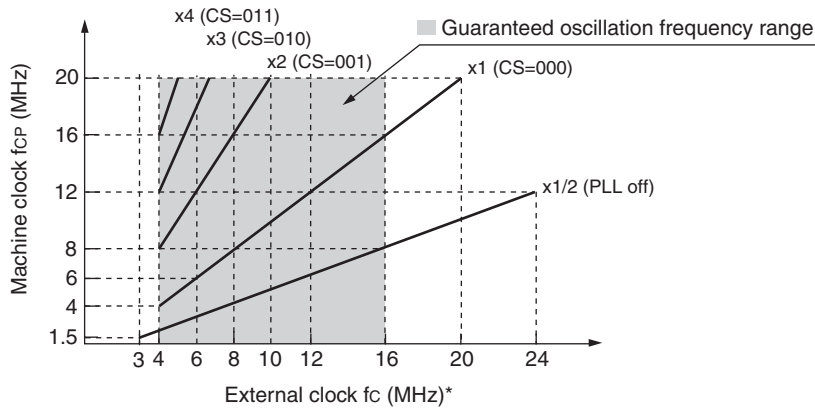

MB90960 Series

- Guaranteed PLL Operation Range

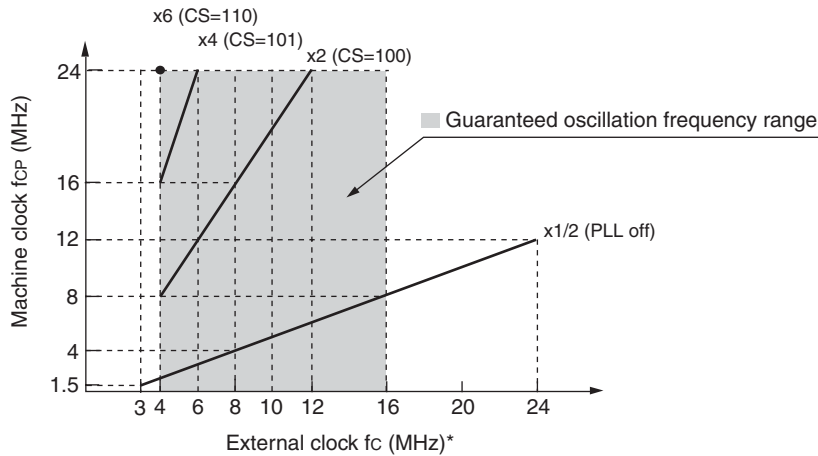

Guaranteed operation range of MB90960 series

- CS2 (bit 0 in PSCCR register) = 0

- CS2 (bit 0 in PSCCR register) = 1

* : When using a crystal oscillator or a ceramic oscillator, the maximum oscillation clock frequency is 16 MHz.

External clock frequency and Machine clock frequency

(2) Reset Standby Input

($T_A = -40\text{ }^\circ\text{C}$ to $+125\text{ }^\circ\text{C}^*$, $V_{CC} = 5.0\text{ V} \pm 10\%$, $f_{CP} \leq 24\text{ MHz}$, $V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Pin	Value		Unit	Remarks	
			Min	Max			
Reset input time	t_{RSTL}	\overline{RST}	500	—	ns	Under normal operation	
			Oscillation time of oscillator*2 + 100 μs		—	ns	In stop mode
			100	—	μs	In time-base timer mode	

*1: If used exceeding $T_A = +105\text{ }^\circ\text{C}$, please contact Fujitsu for reliability limitations.

*2: Oscillation time of oscillator is the time that the amplitude reaches 90%.

In the crystal oscillator, the oscillation time is between several ms and tens of ms. In ceramic oscillators, the oscillation time is between hundreds of μs and several ms. With an external clock, the oscillation time is 0 ms.

MB90960 Series

(3) Power-on Reset

($T_A = -40\text{ }^{\circ}\text{C}$ to $+125\text{ }^{\circ}\text{C}^*$, $V_{CC} = 5.0\text{ V} \pm 10\%$, $f_{CP} \leq 24\text{ MHz}$, $V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Power on rise time	t_R	V_{CC}	—	0.05	30	ms	
Power off time	t_{OFF}	V_{CC}	—	1	—	ms	Due to repetitive operation

*: If used exceeding $T_A = +105\text{ }^{\circ}\text{C}$, please contact Fujitsu for reliability limitations.

Note : If you change the power supply voltage too rapidly, a power-on reset may occur. We recommend that you start up smoothly by restraining voltages when changing the power supply voltage during operation, as shown in the figure below. Perform while not using the PLL clock. However, if voltage drops are within 1 V/s, you can operate while using the PLL clock.

(4) LIN-UART0/1

- Bit setting: ESCR0/1:SCES = 0, ECCR0/1:SCDE = 0

($T_A = -40\text{ }^\circ\text{C}$ to $+125\text{ }^\circ\text{C}^*$, $V_{CC} = 5.0\text{ V} \pm 10\%$, $f_{CP} \leq 24\text{ MHz}$, $V_{SS} = 0\text{ V}$)

*1 : If used exceeding $T_A = +105\text{ }^\circ\text{C}$, please contact Fujitsu for reliability limitations.

*2 : If A/D converter is not operating, a current when CPU is stopped is applicable ($V_{CC} = AV_{CC} = AV_R = 5.0\text{ V}$) .

(Continued)

MB90960 Series

- **About the external impedance of analog input and its sampling time**

- A/D converter with sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage changed to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision.

- Analog input circuit model

Part number	Analog input	R	C
MB90F962(S)	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$	2.0 k Ω (Max)	16.0 pF (Max)
	$4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$	8.2 k Ω (Max)	16.0 pF (Max)
MB90V340E-101/V340-102	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$	2.0 k Ω (Max)	14.4 pF (Max)
	$4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$	8.2 k Ω (Max)	14.4 pF (Max)

Note : The values are reference values.

Use the device with external circuits of the following output impedance for analog inputs:

- Recommended output impedance of external circuits are : Approx. 1.5 k Ω or lower ($4.0\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$, sampling period = 0.5 μs)
- If an external capacitor is used, in consideration of the effect by tap capacitance caused by external capacitors and on-chip capacitors, capacitance of the external one is recommended to be several thousand times as high as internal capacitor.
- If the output impedance of an external circuit is too high, the sampling period for the analog voltage may be insufficient.
- If the sampling time cannot be sufficient, connect a capacitor of about 0.1 μF to the analog input pin.
- To satisfy the A/D conversion precision standard, consider the relationship between the external impedance and minimum sampling time and either adjust the resistor value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value.

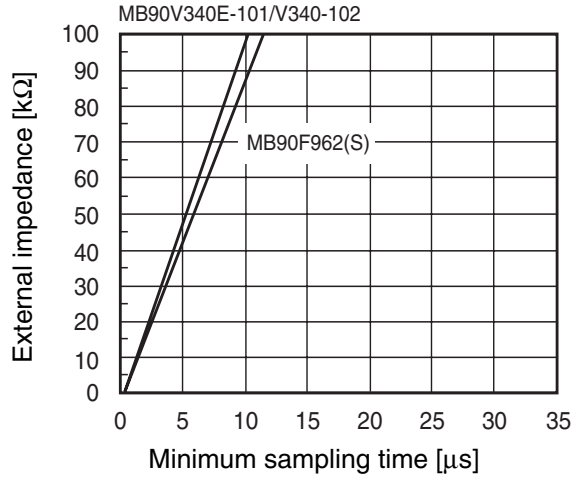

(Continued)

(Continued)

- The relationship between external impedance and minimum sampling time

- At $4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$

(External impedance = 0 kΩ to 100 kΩ)

(External impedance = 0 kΩ to 20 kΩ)

- At $4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$

(External impedance = 0 kΩ to 100 kΩ)

(External impedance = 0 kΩ to 20 kΩ)

- About errors

As $|AVR - AV_{SS}|$ becomes smaller, values of relative errors grow larger.

6. Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by an A/D converter.
- Non linearity error : Deviation between a line across zero-transition line (“00 0000 0000_B” ← → “00 0000 0001_B”) and full-scale transition line (“11 1111 1110_B” ← → “11 1111 1111_B”) and actual conversion characteristics.
- Differential linearity error : Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error : Difference between an actual value and an theoretical value. A total error includes zero transition error, full-scale transition error, and linear error.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB (Ideal value)} = \frac{AVR - AV_{SS}}{1024} \text{ [V]}$$

$$V_{OT} \text{ (Ideal value)} = AV_{SS} + 0.5 \text{ LSB [V]}$$

$$V_{FST} \text{ (Ideal value)} = AVR - 1.5 \text{ LSB [V]}$$

V_{NT} : A voltage at which digital output transits from $(N - 1)_H$ to N_H .

(Continued)

(Continued)

$$\text{Non linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential linearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

V_{OT} : Voltage at which digital output transits from "000_H" to "001_H."

V_{FST} : Voltage at which digital output transits from "3FE_H" to "3FF_H."

FUJITSU LIMITED

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
