## $0.45-\Omega$ CMOS, $1.65-\mathrm{V}$ to $3.6-\mathrm{V}$, Dual DPDT Analog Switch

## FEATURES

- Low Voltage Operation (1.65 V to 3.6 V )
- Low On-Resistance - ron: $0.45 \Omega$ @ 2.7 V
- Fast Switching: $t_{0 N}=28 \mathrm{~ns}$ $\mathrm{t}_{\text {OFF }}=17 \mathrm{~ns}$
- QFN-16 (3x3) Package

## BENEFITS

- Reduced Power Consumption
- High Accuracy
- Reduce Board Space
- TTL/1.8-V Logic Compatible
- High Bandwidth

## APPLICATIONS

- Cellular Phones
- Speaker Headset Switching
- Audio and Video Signal Routing
- PCMCIA Cards
- Battery Operated Systems

## DESCRIPTION

The DG2718 is a dual double-pole/double-throw monolithic CMOS analog switch designed for high performance switching of analog signals. Combining low power, high speed, low on-resistance and small physical size, the DG2718 is ideal for portable and battery powered applications requiring high performance and efficient use of board space.

The DG2718 is built on Vishay Siliconix's low voltage process. An epitaxial layer prevents latchup. Break-before-make is guaranteed.

The switch conducts equally well in both directions when on, and blocks up to the power supply level when off.

Notes:
a. Signals on NC, NO, or COM or IN exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
b. All leads welded or soldered to PC Board.
c. Derate $17.3 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $70^{\circ} \mathrm{C}$
d. Manual soldering with iron is not recommended for leadless components. The QFN is a leadless package. The end of the lead terminal is exposed copper (not plated) as a result of the singulation process in manufacturing. A solder fillet at the exposed copper lip cannot be guaranteed and is not required to ensure adequate bottom side solder interconnection.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

a. Room $=25^{\circ} \mathrm{C}$, Full $=$ as determined by the operating suffix.
b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
c. Typical values are for design aid only, not guaranteed nor subject to production testing.
d. Guarantee by design, nor subjected to production test.
. $\mathrm{V}_{\mathrm{IN}}=$ input voltage to perform proper function.
. Guaranteed by 5-V leakage testing, not production tested.
