## LV8227LG — Bi-CMOS IC For MD and UMD System Motor Driver IC

### Overview

The LV8227LG is a system motor driver IC that implements all the motor driver circuits needed for MD and UMD (Universal Media Disk) products. The LV8227LG provides a three-phase PWM spindle driver, a sled driver (as two three-phase stepping motor driver channels), and focus and tracking drivers (as two PWM H bridge driver channels). Since the LV8227LG uses Bi-CMOS process, it can contribute to further miniaturization, thinner form factors, and lower power in end products.

### Functions

- PWM H bridge motor drivers (2 channels)
- Three-phase stepping motor driver (2 channels)

### Specifications

**Absolute Maximum Ratings** at  $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage range 1	$V_{CC}$ max		6.5	V
Supply voltage range 2	VG max		15.0	V
Output block supply voltage	VM max		6.5	V
H-bridge channel 1 and 2 output current	$I_O$ max1		0.3	A
Three-phase half-bridge channel 1 output current	$I_O$ max2		0.3	A
Three-phase half-bridge channel 2 output current	$I_O$ max3		0.6	A
Allowable power dissipation 1	$P_d$ max1	Independent IC	0.3	W
Allowable power dissipation 2	$P_d$ max2	Mounted on the specified board *	1.45	W
Operating temperature	$T_{opr}$		-20 to +85	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-55 to +150	$^\circ\text{C}$

The specified board \*: 50×40×0.8mm<sup>3</sup> 4-layer glass-epoxy circuit board.

**Allowable Operating Ranges** at  $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Control circuit supply voltage	$V_{CC}$		1.6 to 5.0	V
Predriver supply voltage	VG		VM+5.0 to 12.0	V
Output block supply voltage	VM		2.3 to 5.0	V

■ Any and all SANYO Semiconductor products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO Semiconductor representative nearest you before using any SANYO Semiconductor products described or contained herein in such applications.

■ SANYO Semiconductor assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor products described or contained herein.

## LV8227LG

### Electrical Characteristics at Ta = 25°C, VCC = 2.4V, VM = 3.6V, VG = 9.5V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Control circuit supply voltage						
Control circuit supply voltage 1	ICC1	STALL pin: high (operating) Conditions: ST1 and ST2 pins			15	μA
Control circuit supply voltage 2	ICC2	STALL pin: low (standby mode)			1.0	μA
Predriver supply voltage						
Predriver supply voltage 1	IG1	STALL pin: high (operating) Conditions: ST1 and ST2 pins H bridge (2 channels): 88.2kHz Three-phase driver (2 channels):176.4kHz			1.5	mA
Predriver supply voltage 2	IG2	STALL pin: low (standby mode)			1.0	μA
STALL pin						
High-level input voltage range	VSTALLH		VCC×0.8		VCC	V
Low-level input voltage range	VSTALLL		0		VCC×0.2	V
STALL pin pull-down resistor	RSTALL		0.33	0.6	1.0	MΩ

### Three-Phase Stepping Motor Block (spindle and sled) at Ta = 25°C, VCC = 2.4V, VM = 3.6V, VG = 9.5V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Output Block						
Output on resistance	RonU, V, W	Sum of the high and low-side output on resistances, VG = 9.5V		0.75	1.40	Ω
Decoder Input Pins (U11, 2 to W11, 2 ST1, 2)						
High-level input voltage range	VIH		VCC×0.8		VCC	V
Low-level input voltage range	VIL		0		VCC×0.2	V
ST pin pull-down resistor	RST		0.33	0.6	1.0	MΩ
Comparator Block						
Input offset voltage	VOFS		-5		+5	mV
Common-mode input voltage range	VCM		0		VM	V
High-level output voltage	VOH	IO = -0.5mA	VCC×0.8		VCC	V
Low-level output voltage	VOL	IO = 0.5mA	0		VCC×0.2	V
PWM Pin (PWM1,2)						
High-level input voltage range	VPWMH		VCC×0.8		VCC	V
Low-level input voltage range	VPWML		0		VCC×0.2	V
PWM input frequency	fPWMIN		88.2	176.4		kHz

### H-Bridge Block (focus and tracking) at Ta = 25°C, VCC = 2.4V, VM = 3.6V, VG = 9.5V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Output Block						
Output on resistance	Ron1,2	Sum of the high and low-side output on resistances VG = 9.5V		0.7	1.30	Ω
Output transmission delay time (H bridge)	TRISE	Design target value		0.1		μs
	TFALL	Design target value		0.1		μs
Minimum input pulse width	Tmin	Input pulse width: 89 ns Design target value		70		ns
H-Bridge Input Pins (F11, F12, R11, and R12)						
High-level input voltage range	VAIH		VCC×0.8		VCC	V
Low-level input voltage range	VAIL		0		VCC×0.2	V

Package Dimensions

unit : mm  
3320

- Specifications of any and all SANYO Semiconductor products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Semiconductor Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Semiconductor Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO Semiconductor believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
