

## 1. Overview

This MCU is built using the high-performance silicon gate CMOS process using a R8C Tiny Series CPU core and is packaged in a 32-pin plastic molded LQFP. This MCU operates using sophisticated instructions featuring a high level of instruction efficiency. With 1M bytes of address space, it is capable of executing instructions at high speed.

The data flash ROM (2 KB X 2 blocks) is embedded.

### 1.1 Applications

Electric household appliance, office equipment, housing equipment (sensor, security), general industrial equipment, audio, etc.

## 1.2 Performance Overview

Table 1.1. lists the performance outline of this MCU.

**Table 1.1 Performance outline**

Item		Performance
CPU	Number of basic instructions	89 instructions
	Minimum instruction execution time	62.5 ns ( $f(XIN) = 16$ MHz, $V_{CC} = 3.0$ to 5.5 V) 100 ns ( $f(XIN) = 10$ MHz, $V_{CC} = 2.7$ to 5.5 V)
	Operating mode	Single-chip
	Address space	1M bytes
	Memory capacity	See Table 1.2 "Product List"
Peripheral function	Port	Input/Output: 22 (including LED drive port), Input: 2
	LED drive port	I/O port: 8
	Timer	Timer X: 8 bits x 1 channel, Timer Y: 8 bits x 1 channel, Timer Z: 8 bits x 1 channel (Each timer equipped with 8-bit prescaler) Timer C: 16 bits x 1 channel (Input capture circuit)
	Serial Interface	•1 channel Clock synchronous, UART •1 channel UART
	A/D converter	10-bit A/D converter: 1 circuit, 8 channels
	Watchdog timer	15 bits x 1 (with prescaler) Reset start function selectable
	Interrupt	Internal: 9 factors, External: 5 factors, Software: 4 factors, Priority level: 7 levels
	Clock generation circuit	2 circuits •Main clock generation circuit (Equipped with a built-in feedback resistor) •On-chip oscillator
	Oscillation stop detection function	Main clock oscillation stop detection function
Electrical characteristics	Supply voltage	$V_{CC} = 3.0$ to 5.5 V ( $f(XIN) = 16$ MHz) $V_{CC} = 2.7$ to 5.5 V ( $f(XIN) = 10$ MHz)
	Power consumption	Typ.8mA ( $V_{CC} = 5.0$ V ( $f(XIN) = 16$ MHz) Typ.5mA ( $V_{CC} = 3.0$ V, ( $f(XIN) = 10$ MHz) Typ.35 $\mu$ A ( $V_{CC} = 3.0$ V, Wait mode, peripheral clock stops) Typ.0.7 $\mu$ A ( $V_{CC} = 3.0$ V, Stop mode)
Flash memory	Program/erase supply voltage	$V_{CC} = 2.7$ to 5.5 V
	Program/erase endurance	10,000 times (Data flash) 1,000 times (Program ROM)
Operating ambient temperature		-20 to 85 °C -40 to 85 °C (D-version)
Package		32-pin plastic mold LQFP

### 1.3 Block Diagram

Figure 1.1. shows this MCU block diagram.

Figure 1.1 Block Diagram

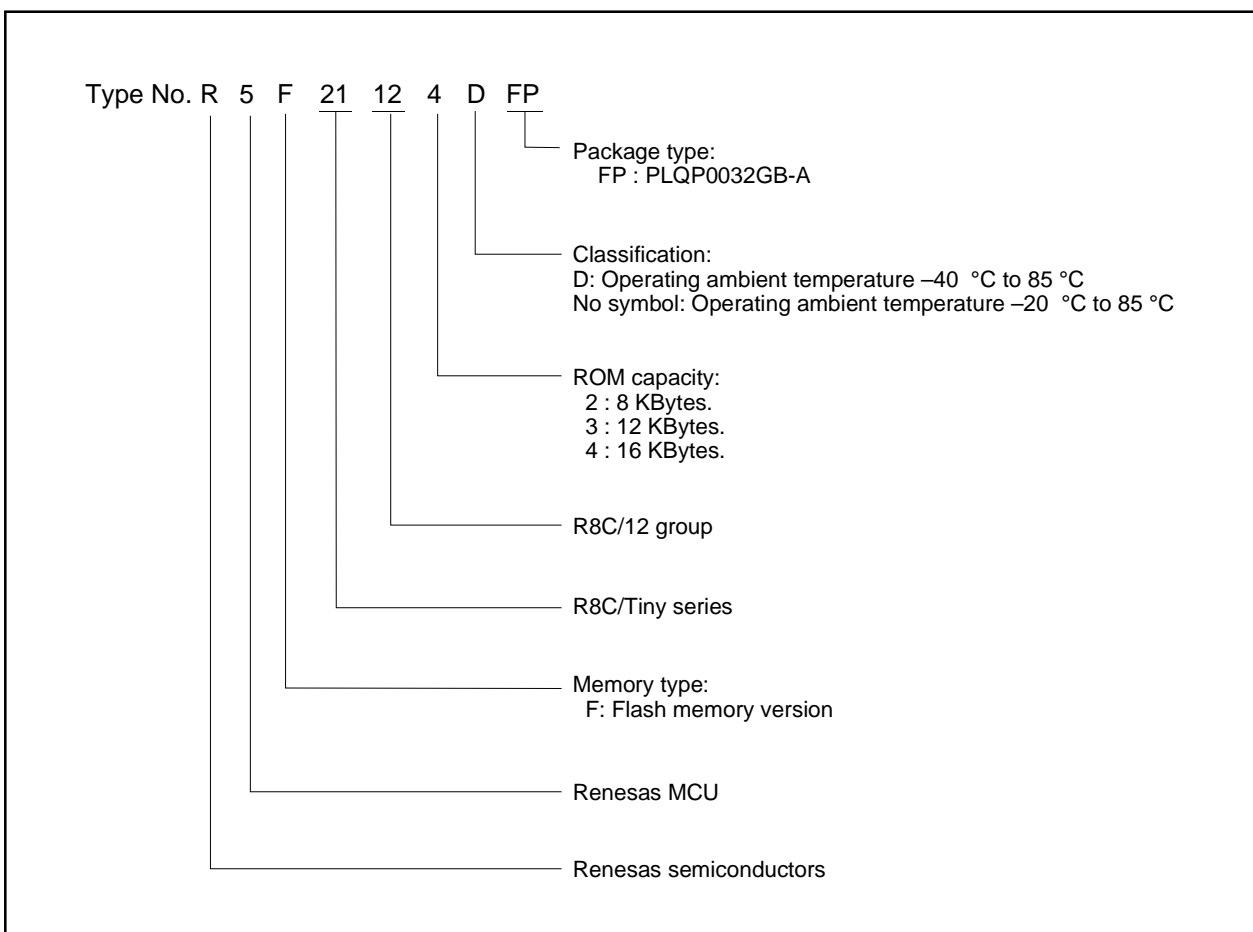

### 1.4 Product Information

Table 1.2 lists the product information.

**Table 1.2 Product Information**

As of January 2006

Type No.	ROM capacity		RAM capacity	Package type	Remarks
	Program ROM	Data flash			
R5F21122FP	8K bytes	2K bytes x 2	512 bytes	PLQP0032GB-A	Flash memory version
R5F21123FP	12K bytes	2K bytes x 2	768 bytes	PLQP0032GB-A	
R5F21124FP	16K bytes	2K bytes x 2	1K bytes	PLQP0032GB-A	
R5F21122DFP	8K bytes	2K bytes x 2	512 bytes	PLQP0032GB-A	D version
R5F21123DFP	12K bytes	2K bytes x 2	768 bytes	PLQP0032GB-A	
R5F21124DFP	16K bytes	2K bytes x 2	1K bytes	PLQP0032GB-A	

**Figure 1.2 Type No., Memory Size, and Package**

### 1.5 Pin Assignments

Figure 1.3 shows the pin configuration (top view).

Figure 1.3 Pin Configuration (Top View)

## 1.6 Pin Description

Table 1.3 shows the pin description

**Table 1.3 Pin description**

Signal name	Pin name	I/O type	Function
Power supply input	Vcc, Vss	I	Apply 2.7 V to 5.5 V to the Vcc pin. Apply 0 V to the Vss pin.
IVcc	IVcc	O	This pin is to stabilize internal power supply. Connect this pin to Vss via a capacitor (0.1 $\mu$ F). Do not connect to Vcc.
Analog power supply input	AVcc, AVss	I	Power supply input pins for A/D converter. Connect the AVcc pin to Vcc. Connect the AVss pin to Vss. Connect a capacitor between pins AVcc and AVss.
Reset input	RESET	I	Input "L" on this pin resets the MCU.
CNVss	CNVss	I	Connect this pin to Vss via a resistor.
MODE	MODE	I	Connect this pin to Vcc via a resistor.
Main clock input	XIN	I	These pins are provided for the main clock generating circuit I/O. Connect a ceramic resonator or a crystal oscillator between the XIN and XOUT pins. To use an externally derived clock, input it to the XIN pin and leave the XOUT pin open.
Main clock output	XOUT	O	
INT interrupt input	INT0 to INT3	I	INT interrupt input pins.
Key input interrupt	KI0 to KI3	I	Key input interrupt pins.
Timer X	CNTR0	I/O	Timer X I/O pin
	CNTR0	O	Timer X output pin
Timer Y	CNTR1	I/O	Timer Y I/O pin
Timer Z	TZOUT	O	Timer Z output pin
Timer C	TCIN	I	Timer C input pin
Serial interface	CLK0	I/O	Transfer clock I/O pin.
	RxD0, RxD1	I	Serial data input pins.
	TxD0, TxD10, TxD11	O	Serial data output pins.
Reference voltage input	VREF	I	Reference voltage input pin for A/sD converter. Connect the VREF pin to Vcc.
A/D converter	AN0 to AN7	I	Analog input pins for A/D converter
I/O port	P00 to P07, P10 to P17, P30 to P33, P37, P45	I/O	These are 8-bit CMOS I/O ports. Each port has an input/output select direction register, allowing each pin in that port to be directed for input or output individually. Any port set to input can select whether to use a pull-up resistor or not by program. P10 to P17 also function as LED drive ports.
Input port	P46, P47	I	Port for input-only.

## 2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU registers. The CPU has 13 registers. Of these, R0, R1, R2, R3, A0, A1 and FB comprise a register bank. Two sets of register banks are provided.

Figure 2.1 CPU Register

### 2.1 Data Registers (R0, R1, R2 and R3)

R0 is a 16-bit register for transfer, arithmetic and logic operations. The same applies to R1 to R3. The R0 can be split into high-order bit (R0H) and low-order bit (R0L) to be used separately as 8-bit data registers. The same applies to R1H and R1L as R0H and R0L. R2 can be combined with R0 to be used as a 32-bit data register (R2R0). The same applies to R3R1 as R2R0.

## 2.2 Address Registers (A0 and A1)

A0 is a 16-bit register for address register indirect addressing and address register relative addressing. They also are used for transfer, arithmetic and logic operations. The same applies to A1 as A0. A0 can be combined with A1 to be used as a 32-bit address register (A1A0).

## 2.3 Frame Base Register (FB)

FB is a 16-bit register for FB relative addressing.

## 2.4 Interrupt Table Register (INTB)

INTB is a 20-bit register indicates the start address of an interrupt vector table.

## 2.5 Program Counter (PC)

PC, 20 bits wide, indicates the address of an instruction to be executed.

## 2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointer (SP), USP and ISP, are 16 bits wide each. The U flag of FLG is used to switch between USP and ISP.

## 2.7 Static Base Register (SB)

SB is a 16-bit register for SB relative addressing.

## 2.8 Flag Register (FLG)

FLG is a 11-bit register indicating the CPU state.

### 2.8.1 Carry Flag (C)

The C flag retains a carry, borrow, or shift-out bit that has occurred in the arithmetic logic unit.

### 2.8.2 Debug Flag (D)

The D flag is for debug only. Set to "0".

### 2.8.3 Zero Flag (Z)

The Z flag is set to "1" when an arithmetic operation resulted in 0; otherwise, "0".

### 2.8.4 Sign Flag (S)

The S flag is set to "1" when an arithmetic operation resulted in a negative value; otherwise, "0".

### 2.8.5 Register Bank Select Flag (B)

The register bank 0 is selected when the B flag is "0". The register bank 1 is selected when this flag is set to "1".

### 2.8.6 Overflow Flag (O)

The O flag is set to "1" when the operation resulted in an overflow; otherwise, "0".

### 2.8.7 Interrupt Enable Flag (I)

The I flag enables a maskable interrupt.

An interrupt is disabled when the I flag is set to "0", and are enabled when the I flag is set to "1". The I flag is set to "0" when an interrupt request is acknowledged.

### 2.8.8 Stack Pointer Select Flag (U)

ISP is selected when the U flag is set to "0", USP is selected when the U flag is set to "1".

The U flag is set to "0" when a hardware interrupt request is acknowledged or the INT instruction of software interrupt numbers 0 to 31 is executed.

### 2.8.9 Processor Interrupt Priority Level (IPL)

IPL, 3 bits wide, assigns processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has greater priority than IPL, the interrupt is enabled.

### 2.8.10 Reserved Bit

When write to this bit, set to "0". When read, its content is indeterminate.

### 3. Memory

Figure 3.1 is a memory map of this MCU. This MCU provides 1-Mbyte address space from addresses 00000<sub>16</sub> to FFFFF<sub>16</sub>.

The internal ROM (program ROM) is allocated lower addresses beginning with address 0FFFF<sub>16</sub>. For example, a 16-Kbyte internal ROM is allocated addresses from 0C000<sub>16</sub> to 0FFFF<sub>16</sub>.

The fixed interrupt vector table is allocated addresses 0FFDC<sub>16</sub> to 0FFFF<sub>16</sub>. They store the starting address of each interrupt routine.

The internal ROM (data flash) is allocated addresses from 02000<sub>16</sub> to 02FFF<sub>16</sub>.

The internal RAM is allocated higher addresses beginning with address 00400<sub>16</sub>. For example, a 1-Kbyte internal RAM is allocated addresses 00400<sub>16</sub> to 007FF<sub>16</sub>. The internal RAM is used not only for storing data, but for calling subroutines and stacks when interrupt request is acknowledged.

Special function registers (SFR) are allocated addresses 00000<sub>16</sub> to 002FF<sub>16</sub>. The peripheral function control registers are located there. All addresses, which have nothing allocated within the SFR, are reserved area and cannot be accessed by users.

Figure 3.1 Memory Map

## 4. Special Function Register (SFR)

SFR(Special Function Register) is the control register of peripheral functions. Tables 4.1 to 4.4 list the SFR information

**Table 4.1 SFR Information(1)(1)**

—	Program, Erase Voltage		2.7	—	5.5	V
—	Read Voltage		2.7	—	5.5	V
—	Program, Erase Temperature		0	—	60	°C
—	Data hold time <sup>(7)</sup>	Ambient temperature = 55 °C	20	—	—	year

**NOTES:**

1. V<sub>CC</sub>=AV<sub>CC</sub>=2.7 to 5.5V at T<sub>opr</sub> = 0 to 60 °C, unless otherwise specified.
2. Definition of Program/Erase  
The endurance of Program/Erase shows a time for each block.  
If the program/erase number is “n” (n = 1,000, 10,000), “n” times erase can be performed for each block.  
For example, if performing one-byte write to the distinct addresses on Block A of 2K-byte block 2048 times and then erasing that block, the number of Program/Erase cycles is one time.  
However, performing multiple writes to the same address before an erase operation is prohibited (overwriting prohibited).
3. Numbers of Program/Erase cycles for which all electrical characteristics is guaranteed.
4. To reduce the number of Program/Erase cycles, a block erase should ideally be performed after writing in series as many distinct addresses (only one time each) as possible. If programming a set of 16 bytes, write up to 128 sets and then erase them one time. This will result in ideally reducing the number of Program/Erase cycles. Additionally, averaging the number of Program/Erase cycles for Block A and B will be more effective. It is important to track the total number of block erases and restrict the number.
5. If error occurs during block erase, attempt to execute the clear status register command, then the block erase command at least three times until the erase error disappears.
6. Customers desiring Program/Erase failure rate information should contact their Renesas technical support representative.
7. The data hold time includes time that the power supply is off or the clock is not supplied.

**Table 5.5 Flash Memory (Data flash Block A, Block B) Electrical Characteristics<sup>(4)</sup>**

Symbol	Parameter	Measuring condition	Standard			Unit
			Min.	Typ.	Max.

—	Byte program time(program/erase endurance ≤1000 times)		—	50	400	μs
—	Byte program time(program/erase endurance >1000 times)		—	65	—	μs
—	Block erase time(program/erase endurance ≤1000 times)		—	0.2	9	s
—	Block erase time(program/erase endurance >1000 times)		—	0.3	—	s
td(SR-ES)	Time delay from Suspend Request until Erase Suspend		—	—	8	ms
—	Erase Suspend Request Interval		10	—	—	ms
—	Program, Erase Voltage		2.7	—	5.5	V
—	Read Voltage		2.7	—	5.5	V
—	Program/Erase Temperature		-20(-40) <sup>(8)</sup>	—	85	°C
—	Data hold time <sup>(9)</sup>	Ambient temperature = 55 °C	20	—	—	year

## NOTES:

1. Referenced to  $V_{CC}=AV_{CC}=2.7$  to  $5.5V$  at  $T_{opr} = -20$  to  $85$  °C /  $-40$  to  $85$  °C unless otherwise specified.
2. Definition of Program/Erase  
The endurance of Program/Erase shows a time for each block.  
If the program/erase number is “n” ( $n = 1,000, 10,000$ ), “n” times erase can be performed for each block.  
For example, if performing one-byte write to the distinct addresses on Block A of 2K-byte block 2048 times and then erasing that block, the number of Program/Erase cycles is one time.  
However, performing multiple writes to the same address before an erase operation is prohibited (overwriting prohibited).
3. Numbers of Program/Erase cycles for which all electrical characteristics is guaranteed.
4. Table 16.5 applies for Block A or B when the Program/Erase cycles are more than 1000. The byte program time up to 1000 cycles are the same as that of the program area (see Table 5.4).
5. To reduce the number of Program/Erase cycles, a block erase should ideally be performed after writing in series as many distinct addresses (only one time each) as possible. If programming a set of 16 bytes, write up to 128 sets and then erase them one time. This will result in ideally reducing the number of Program/Erase cycles. Additionally, averaging the number of Program/Erase cycles for Block A and B will be more effective. It is important to track the total number of block erases and restrict the number.
6. If error occurs during block erase, attempt to execute the clear status register command, then the block erase command at least three times until the erase error disappears.
7. Customers desiring Program/Erase failure rate information should contact their Renesas technical support representative.
8.  $-40$  °C for D version.
9. The data hold time includes time that the power supply is off or the clock is not supplied.

**Figure 5.2 Time delay from Suspend Request until Erase Suspend****Table 5.6 Power Circuit Timing Characteristics**

Symbol	Parameter	Measuring condition	Standard			Unit
			Min.	Typ.	Max.	
td(P-R)	Time for internal power supply stabilization during powering-on <sup>(2)</sup>		1	—	2000	μs
td(R-S)	STOP release time <sup>(3)</sup>		—	—	150	μs

## NOTES:

1. The measuring condition is  $V_{CC}=AV_{CC}=2.7$  to  $5.5$  V and  $T_{opr}=25$  °C.
2. This shows the waiting time until the internal power supply generating circuit is stabilized during powering-on.
3. This shows the time until BCLK starts from the interrupt acknowledgement to cancel stop mode.

REVISION HISTORY

R8C/12 Group Datasheet

Rev.	Date	Description	
		Page	Summary
0.10	Oct 28, 2003		First edition issued
0.20	Dec05, 2003	16	Table 16.5 revised
1.00	Sep30, 2004	All pages	Words standardized (on-chip oscillator, serial interface, A/D)
		2	Table 1.1 revised
		5	Figure 1.3, NOTES 3 added
		6	Table 1.3 revised
		9	Figure 3.1, NOTES added
		10-13	One body sentence in chapter 4 added ; Titles of Table 4.1 to 4.4 added
		12	Table 4.3 revised ; Table 4.4 revised
		14	Table 5.2 revised
		15	Table 5.3 revised
		16	Table 5.4 and 5.5 revised
		17	Table 5.7 revised
		18	Table 5.8 revised
		19	Table 5.13 revised
		21	Table 5.14 revised
		22	Table 5.15 revised
		23	Table 5.17 revised
1.10	Apr.27.2005	4	Table 1.2, Figure 1.2 package name revised
		5	Figure 1.3 package name revised
		10	Table 4.1 revised
		12	Table 4.3 revised
		15	Table 5.3 partly revised
		16	Table 5.4, Table 5.5 partly added
		17	Table 5.6, Table 5.7 partly revised
		21	Table 5.14 partly revised
		26	Package Dimensions revised
1.20	Jan.27.2006	2	Table 1.1 Performance outline revised
		3	Figure 1.1 Block diagram partly revised
		4	1.4 Product Information, title of Table 1.2 "Product List" → "Product Informaton" revised ROM capacity; "Program area" → "Program ROM", "Data area" → "Data flash" revised
		6	Figure 1.2 Type No., Memory Size, and Package partly revised
		7-8	Table 1.3 Pin description revised 2 Central Processing Unit (CPU) revised Figure 2.1 CPU register revised
		9	3 Memory, Figure 3.1 Memory Map; "Program area" → "Program ROM", "Data area" → "Data flash" revised
		10	Table 4.1 SFR Information(1) NOTES:1 revised

REVISION HISTORY

R8C/12 Group Datasheet

Rev.	Date	Description			
		Page	Summary		
1.20	Jan.27.2006	11	Table 4.2 SFR Information(2) NOTES:1 revised		
		12	Table 4.3 SFR Information(3); 0081 <sub>16</sub> : “Prescaler Y” → “Prescaler Y Register” 0082 <sub>16</sub> : “Timer Y Secondary” → “Timer Y Secondary Register” 0083 <sub>16</sub> : “Timer Y Primary” → “Timer Y Primary Register” 0085 <sub>16</sub> : “Prescaler Z” → “Prescaler Z Register” 0086 <sub>16</sub> : “Timer Z Secondary” → “Timer Z Secondary Register” 0087 <sub>16</sub> : “Timer Z Primary” → “Timer Z Primary Register” 008C <sub>16</sub> : “Prescaler X” → “Prescaler X Register” revised NOTES:1 revised		
		13	Table 4.4 SFR Information(4) NOTES:1 revised		
		14	Table 5.2 Recommended Operating Conditions; NOTES: 1, 2, 3 revised		
		15	Table 5.3 A/D Conversion Characteristics; “A/D operation clock frequency” → “A/D operating clock frequency” revised NOTES: 1, 2, 3, 4 revised		
		16	Table 5.4 Flash Memory (Program ROM) Electrical Characteristics; “Data retention duration” → “Data hold time” revised “Topr” → “Ambient temperature” NOTES: 1 to 7 added Measuring condition of byte program time and block erase time deleted		
		17	Table 5.5 Flash Memory (Data flash Block A, Block B) Electrical characteristics “Data retention duration” → “Data hold time” revised “Topr” → “Ambient temperature” NOTES: 1, 3 revised, NOTES: 9 added Measuring condition of byte program time and block erase time deleted		
		18	Table 5.7 Electrical Characteristics (1) [V <sub>CC</sub> =5V]; “P1 <sub>0</sub> to P1 <sub>7</sub> Except X <sub>OUT</sub> ” → “Except P1 <sub>0</sub> to P1 <sub>7</sub> , X <sub>OUT</sub> ” revised Table 5.8 Electrical Characteristics (2) [V <sub>CC</sub> =5V]; Measuring condition Stop mode: “Topr = 25 °C” added NOTES: 1, 2 revised		
		21	Table 5.14 Electrical Characteristics (3) [V <sub>CC</sub> =3V] “P1 <sub>0</sub> to P1 <sub>7</sub> Except X <sub>OUT</sub> ” → “Except P1 <sub>0</sub> to P1 <sub>7</sub> , X <sub>OUT</sub> ” revised		
		22	Table 5.15 Electrical Characteristics (4) [V <sub>CC</sub> =3V]; Measuring condition Stop mode: “Topr = 25 °C” added NOTES: 1, 2 revised		

**Keep safety first in your circuit designs!**

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.  
Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

**Notes regarding these materials**

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
  2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
  3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.  
The information described here may contain technical inaccuracies or typographical errors.  
Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.  
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
  4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
  5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
  6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
  7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
  8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
