

FSP3601
FEATURES

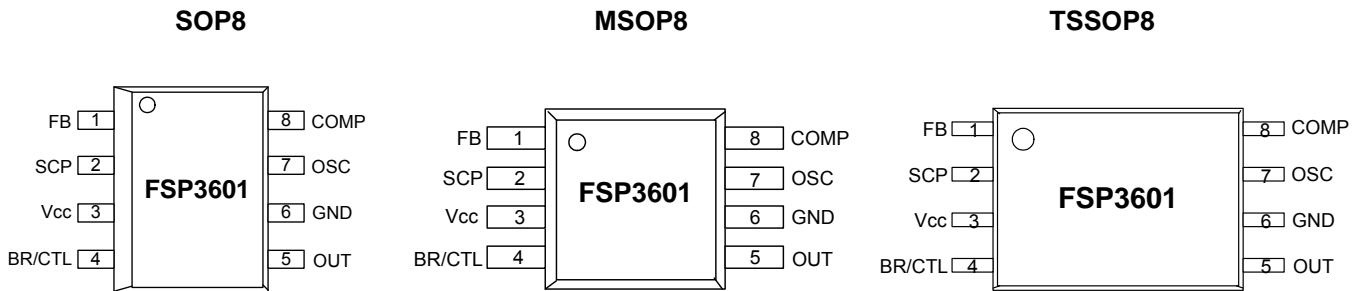

- Wide supply voltage operating range: 1.8 to 15V
- Reference voltage precision: 4%
- Low current consumption:
Operation Mode 5.5mA
Standby Mode: 1μA
- High speed oscillator frequency: 1MHz max
- Programmable Soft Start function (SS)
- Short Circuit Protection function (SCP)
- Totem-pole output with adjustable on/off current (for NPN transistors or n-channel MOSFET)
- Logic level control stand-by mode function
- Package: SOP8/MSOP8/TSSOP8

TYPICAL APPLICATION

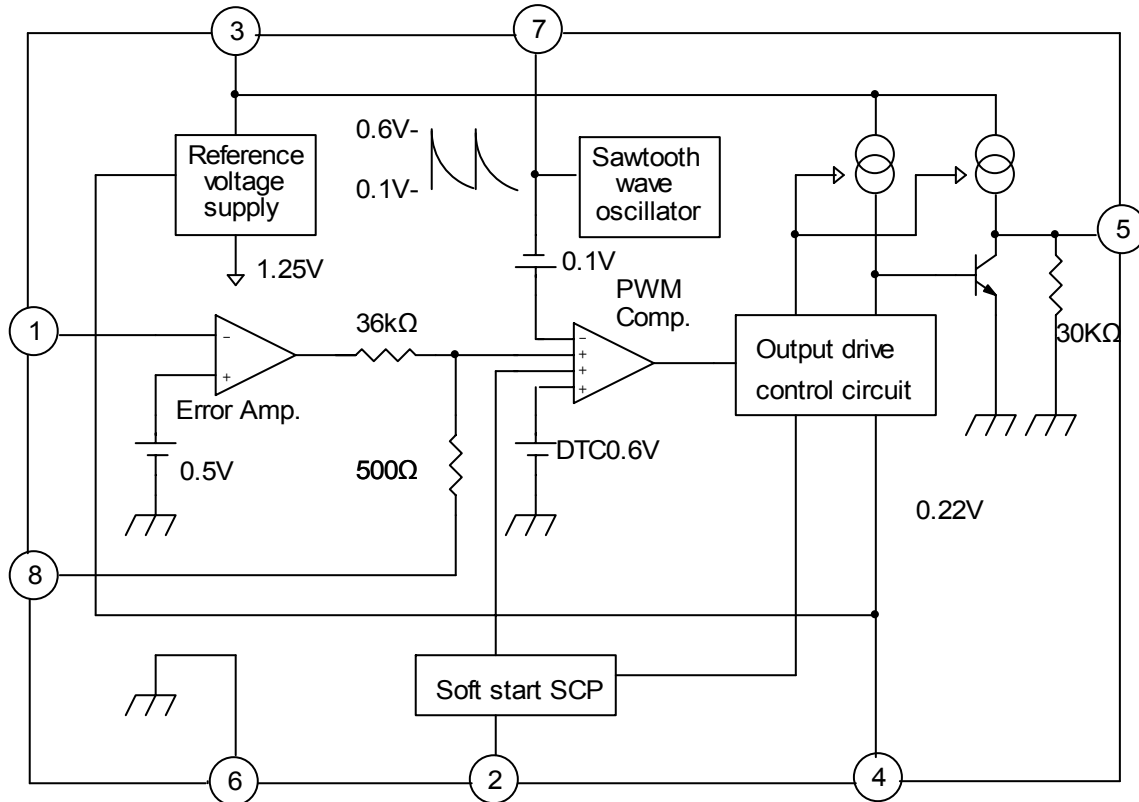

- Digital Camera
- PDA
- Portable Equipment

GENERAL DESCRIPTION

The FSP3601 is a boost topology switching regulator control IC for battery-used applications field. The FSP3601 includes a totem-pole single output stage for driving NPN transistor or N-MOS, high precision reference (0.5V) for comparing output voltage with feedback amplifier, an internal dead-time control for controlling the minimum duty cycle, programmable soft start with short circuit protection function and logic level control for operating mode or standby mode.

PIN ASSIGNMENT

PIN DESCRIPTION

Name	No.	I/O	Description
FB	1	I	Error amplifier inverting input pin
SCP	2	I	Connected a capacitor Soft start and SCP function pin
V _{cc}	3	P	IC Power supply
BR/CTL	4	I	Output current setting and control pin
OUT	5	O	Totem-pole output
GND	6	P	IC ground
OSC	7	I	Capacitor and resistor connected for the frequency of oscillation
COMP	8	O	Error amplifier compensation output

■ DETAILED DESCRIPTION

Voltage reference

A 1.25V regulator operating from V_{CC} is used to power the internal circuitry of the FSP3601. An internal resistor divider provides 0.5V reference for the error amplifier, Soft-start (typ. 0.9V) and SCP (typ.0.8V).

Error amplifier

The error amplifier compares a sample of the dc-dc converter output voltage to the 0.5V reference and generates an error signal for the PWM comparator. Output voltage of the dc-dc converter is setting with the resistor divider using the following expression (see fig12):

$$V_{OUT} = (1 + R_1 / R_2) * 0.5$$

Figure 12. Error Amplifier with Feedback resistance divider

Oscillator

The oscillator frequency can be set between 20 KHz and 500 KHz by connecting a resistor and a capacitor at OSC pin of FSP3601 to ground. The oscillator frequency can be determined by using the graph shown in figure 9.

The oscillator output is a sawtooth wave with a minimum value of approximately 0.1V and a maximum value of approximately 0.6V. The PWM comparator compares the oscillator voltage with error amplifier output voltage; internal DTC voltage (typ.0.6V) and soft start setting voltage. When the sawtooth wave is lower than the above three output voltage, the output of FSP3601 is high (Turn on NPN transistor or NMOS).

Under voltage lockout (UVLO)

The under voltage lockout circuits turn the output off whenever the supply voltage drop too low (approximately 0.9V at 25 °C) for proper operation .A hysteresis voltage of 200 mV eliminates false triggering on noise and chattering.

Soft Start / Short-circuit protection (S.S. / S.C.P.)

The soft start is function after power on, and the interval of the soft start time is determined by capacitor connected to SCP pin (pin 2). When soft start function finished, the internal soft start voltage is setting high, but external SCP pin is setting low in order to change to short circuit detection / protection function.

The time of soft start is following expression:

$$T_{SS}=0.35*C[\mu F]$$

The short circuit protection is functional due to a heavy loading drop and output of error amplifier (COMP pin) is maintain a V_{POS} (typ.0.87V), the capacitor is charged until SCP threshold voltage (typ.0.8V), then FSP3601 output is disable (internal pull-low) and the capacitor is discharged to low .

The time of short circuit protection is following expression:

$$T_{SCP}=0.8*C[\mu F]$$

Output transistor

The FSP3601 has a totem-pole transistor with a 40 mA source/sink current rating to drive an external NPN transistor or NMOS transistor directly. The driving current capability depends on a resistor R that is connected to BR/CTL pin (pin4) of FSP3601. (see fig.13)

Figure13. Output transistor driving control circuit

BR/CTL pin can also use to control the output of FSP3601 for disable or enable function of system.

Control Pin	Q1	BR/CTL Pin	Output Transistor Function	Mode
Low	Off	Open	Disable	Stand-by
High	On	Bias Current	Enable	Operation
