

Three Terminal Low Current Positive Voltage Regulators

LM78L05XA3

Description

These regulators employ internal current-limiting and thermal-shutdown, making them essentially indestructible. They can deliver up to 100mA output current, if the case temperature can keep in $T_c=25^{\circ}\text{C}$. They are intended as fixed voltage regulators in a wide range of applications including local (on-card) regulation for elimination of noise and distribution problems associated with single-point regulation. In addition, they can be used with power pass elements to make high-current voltage regulators. The LM78L05 used as a Zener diode/resistor combination replacement, offers an effective output impedance improvement of typically two orders of magnitude, along with lower quiescent current and lower noise.

Absolute Maximum Ratings ($T_a=25^{\circ}\text{C}$)

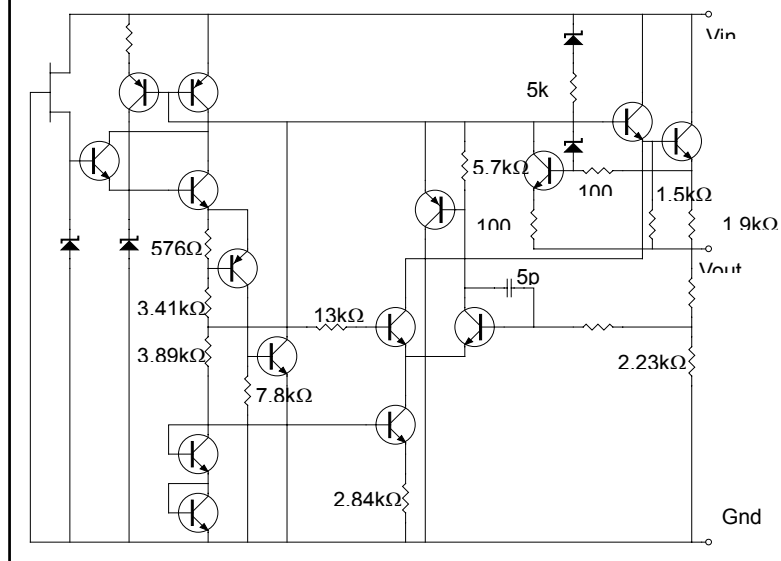

- Input Voltage..... 30 V
- Total Power Dissipation..... Internally limited
- Operating Temperature Range..... 0°C to $+125^{\circ}\text{C}$
- Maximum Junction Temperature..... 125°C
- Storage Temperature Range..... -55°C to $+150^{\circ}\text{C}$
- Lead Temperature (Soldering 10S)..... 260°C

Typical Application

Note:
 C1 and C2 are required if regulator is located far from power supply filter and load, or oscillation may be induced on the loop.

Notes: 1.Controlling dimension: millimeters.
 2.Maximum lead thickness includes lead finish thickness, and minimum lead thickness is the minimum thickness of base material.
 3.If there is any question with packing specification or packing method, please contact your local CYStek sales office.

Material:

- Lead: 42 Alloy ; solder plating
- Mold Compound: Epoxy resin family, flammability solid burning class: UL94V-0
