

HD74LVCC3245A

Octal Bus Transceiver with adjustable output voltage and 3-state Outputs

REJ03D0379-0201 Rev.2.01 Apr. 12, 2005

Description

The HD74LVCC3245A has eight bus transceivers with three state outputs in a 24 pin package. When (DIR) is high, data flows from the A inputs to the B outputs, and when (DIR) is low, data flows from the B inputs to the A outputs. A and B bus are separated by making enable input (OE) high level. This 8-bit non-inverting bus transceiver contains two separate power-supply rails.

And this product has two terminals (V_{CCA} , V_{CCB}), V_{CCA} is connected with control input and A bus side, V_{CCB} is connected with B bus side. V_{CCA} and V_{CCB} are isolated.

The B port is designed to track $V_{\rm CCB}$, which accepts voltage from 3 V to 5.5 V, and the A port is designed to track $V_{\rm CCA}$, which operates at 2.3 V to 3.6 V. This allows for translation from a 3.3 V to a 5 V system environment and vice versa, or from a 2.5 V to a 3.3 V system environment and vice versa. Low voltage and high-speed operation is suitable at the battery drive product (note type personal computer) and low power consumption extends the life of a battery for long time operation.

Features

- This product function as level shift transceiver that change V_{CCA} input level to V_{CCB} output level, V_{CCB} input level to V_{CCA} output level by providing different supply voltage to V_{CCA} and V_{CCB}.
- This product is able to the power management: Turn on and off the supply on V_{CCB} side with providing the supply of V_{CCA} (Enable input (\overline{OE}) : High level)
- $V_{CCA} = 2.3 \text{ V to } 3.6 \text{ V}, V_{CCB} = 3.0 \text{ V to } 5.5 \text{ V}$
- All control input V_I (max) = 5.5 V (@ V_{CCA} = 0 V to 5.5 V)
- All A bus side input outputs V_{I/O} (max) = 5.5 V (@V_{CCA} = 0 V or output off state)
- All B bus side input outputs $V_{I/O}$ (max) = 5.5 V (@ V_{CCB} = 0 V or output off state)
- High output current

A bus side: $\pm 8 \text{ mA } (@V_{CCA} = 2.3 \text{ V})$ $\pm 12 \text{ mA } (@V_{CCA} = 2.7 \text{ V})$ $\pm 24 \text{ mA } (@V_{CCA} = 3.0 \text{ V})$ B bus side: $\pm 24 \text{ mA } (@V_{CCB} = 3.0 \text{ V})$

Ordering Information

| Part Name | Package Type | Package Code (Previous Code) | Package Abbreviation | Taping Abbreviation (Quantity) |
|------------------|--------------|---------------------------------|-------------------------|--------------------------------|
| HD74LVCC3245ATEL | TSSOP-24 pin | PTSP0024JB-A (TTP-24DBV) | Т | EL (1,000 pcs/reel) |

Function Table

| Inp | Inputs | | | | | |
|-----|--------|-----------------|--|--|--|--|
| ŌĒ | DIR | Operation | | | | |
| L | L | B data to A bus | | | | |
| L | Н | A data to B bus | | | | |
| Н | X | Z | | | | |

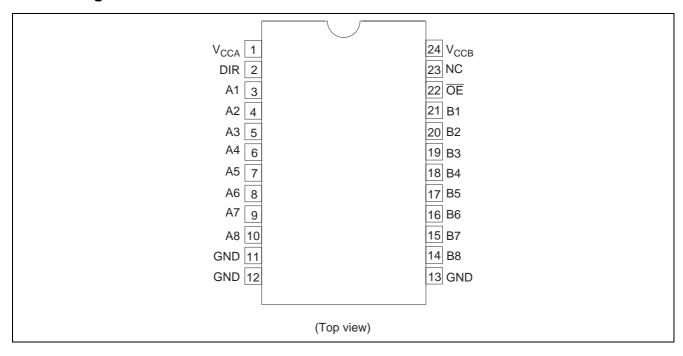

H: High level

L: Low level

X: Immaterial

Z: High impedance

Pin Arrangement

Absolute Maximum Ratings

| Item | Symbol | Ratings | Unit | Conditions |
|---|--|--------------------------|------|---|
| Supply voltage | V _{CCA} , V _{CCB} | -0.5 to 6.0 | V | |
| Input voltage*1 | VI | -0.5 to 6.0 | V | DIR, ŌE |
| Input / output voltage | V _{I/O} | -0.5 to V_{CCA} +0.5 | V | A port output "H" or "L" |
| | | -0.5 to 6.0 | | A port output "Z" or V _{CCA} : OFF |
| | | -0.5 to V_{CCB} +0.5 | | B port output "H" or "L" |
| | | -0.5 to 6.0 | | B port output "Z" or V _{CCB} : OFF |
| Input diode current | I _{IK} | -50 | mA | V ₁ < 0 |
| Output diode current | I _{OK} | -50 | mA | V _O < 0 |
| | | 50 | | V _O > V _{CC} +0.5 |
| Output current | Io | ±50 | mA | |
| V _{CCA} , V _{CCB} , GND current | I _{CCA} , I _{CCB} , I _{GND} | 100 | mA | |
| Maximum power dissipation | P _T | 862 | mW | TSSOP |
| at Ta = 25°C (in still air)*2 | | | | |
| Storage temperature | Tstg | -65 to 150 | °C | |

Notes: The absolute maximum ratings are values, which must not individually be exceeded, and furthermore, no two of which may be realized at the same time.

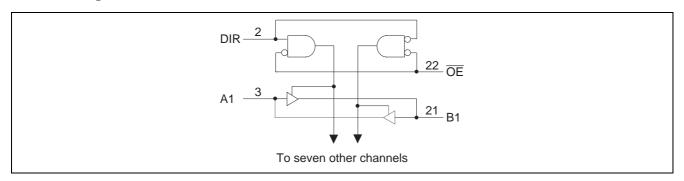

- 1. The input and output voltage ratings may be exceeded even if the input and output clamp-current ratings are observed.
- 2. The maximum package power dissipation was calculated using a junction temperature of 150°C.

Recommended Operating Conditions

| Item | Symbol | Ratings | Unit | Conditions |
|------------------------------------|------------------|-----------------------|--------|---|
| Supply voltage | V _{CCA} | 2.3 to 3.6 | V | |
| | V _{CCB} | 3.0 to 5.5 | | |
| Input / output voltage | Vı | 0 to 5.5 | V | DIR, ŌE |
| | V _{I/O} | 0 to V _{CCA} | | A port output "H" or "L" |
| | | 0 to 5.5 | | A port output "Z" or V _{CCA} : OFF |
| | | 0 to V _{CCB} | | B port output "H" or "L" |
| | | 0 to 5.5 | | B port output "Z" or V _{CCB} : OFF |
| Output current | I _{OHA} | -8 | mA | V _{CCA} = 2.3 V |
| | | -12 | | V _{CCA} = 2.7 V |
| | | -24 | | V _{CCA} = 3.3 V |
| | I _{OHB} | -24 | | V _{CCB} = 3.0 V |
| | I _{OLA} | 8 | | V _{CCA} = 2.3 V |
| | | 12 | | V _{CCA} = 2.7 V |
| | | 24 | | V _{CCA} = 3.3 V |
| | I _{OLB} | 24 | | V _{CCB} = 3.0 V |
| Input transition rise or fall time | Δt / Δv | 10 | ns / V | |
| Operating temperature | Та | -40 to 85 | °C | |

Note: Unused or floating inputs must be held high or low.

Power-up considerations

Level-translation devices offer an opportunity for successful mixed-voltage signal design. A proper power-up sequence always should be followed to avoid excessive supply current, bus contention, oscillations, or other anomalies caused by improperly biased device pins.

Take these precautions to guard against such power-up problems.

- 1. Connect ground before any supply voltage is applied.
- 2. Next, power up the control side of the device. (Power up of V_{CCA} is first. Next power up is V_{CCB} .)
- 3. Tie \overline{OE} to V_{CCA} with a pullup resistor so that it ramps with V_{CCA} .
- 4. Depending on the direction of the data path, DIR can be high or low. If DIR high is needed (A data to B bus), ramp it with V_{CCA} . Overwise, keep DIR low.

Notes: 1. All input pulses are supplied by generators having the following characteristics : PRR \leq 10 MHz, Z_O = 50 Ω , $t_r \leq$ 2.5 ns, $t_f \leq$ 2.5 ns.

- 2. Waveform A is for an output with internal conditions such that the output is low except when disabled by the output control.
- 3. Waveform B is for an output with internal conditions such that the output is high except when disabled by the output control.
- 4. The output are measured one at a time with one transition per measurement.

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.

Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

- (ii) use of nontrammaple material of (iii) prevention against any maintention or misnap.

 Notes regarding these materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.

 Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.

 All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.

 The information described here may contain technical inaccuracies or typographical errors.

 Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.

 Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (http://www.renesas.com).

 4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained here

- use.
