620kHz/1.25MHz Step-up DC/DC Converter

## DESCRIPTION

The EUP2627 is a high performance current mode, PWM step-up converter with pin selectable operating frequency. With an internal $3.5 \mathrm{~A}, 160 \mathrm{~m} \Omega$ MOSFET, it can generate 12 V at up to 500 mA output current from a 5 V supply. The selectable 620 kHz and 1.25 MHz allows smaller inductors and faster transient response. An external compensation pin gives the user greater flexibility in setting loop compensation allowing the use of low ESR Ceramic output capacitors. Soft-start is controlled with an external capacitor, which determines the input current ramp rate during start-up.

When shut down, it draws $<10 \mu \mathrm{~A}$ of current and can operate down to 2.5 V input supply. These features along with 1.25 MHz switching frequency makes it an ideal device for portable equipment and TFT-LCD displays.

The EUP2627 is available in an 10-pin TDFN package. The device is specified for operation over the full $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ temperature range.

## FEATURES

- $90 \%$ Efficiency
- $3.5 \mathrm{~A}, 160 \mathrm{~m} \Omega$ Power MOSFET
- 2.5 V to 5.5 V Input Range
- Adjustable Output Voltage up to 28 V
- $620 \mathrm{kHz} / 1.25 \mathrm{MHz}$ Switching Frequency Selection
- Adjustable Soft-Start
- Internal Thermal Protection
- Small TDFN-10 package
- RoHS Compliant and $100 \%$ Lead ( Pb )-Free

## APPLICATIONS

- TFT-LCD Displays
- DSL Modems
- Set-Top Boxes
- PCMCIA Cards
- Portable Equipment
- Handheld Devices

## Typical Application Circuit

## Pin Configurations

## Pin Description

| PIN | TDFN-10 | DESCRIPTION |
| :---: | :---: | :--- |
| COMP | 1 | Compensation pin. Output of the internal error amplifier. Capacitor and resistor from <br> COMP pin to ground. |
| FB | 2 | Voltage feedback pin. Internal reference is 1.24V NOMINAL. Connect a resistor divider <br> from $\mathrm{V}_{\text {OUT. }}$. $\mathrm{V}_{\text {OUT }}=1.24 \mathrm{~V}\left(1+\mathrm{R}_{1} / \mathrm{R}_{2}\right)$. |
| $\overline{\text { SHDN }}$ | 3 | Shutdown control pin. Pull $\overline{\mathrm{SHDN}}$ low to turn off the device. |
| GND | 4.5 | Analog and power ground. |
| SW | 6.7 | Power switch pin. Switch connected to the drain of the internal power MOSFET. |
| $\mathrm{V}_{\text {IN }}$ | 8 | Analog power input pin. |
| FSEL | 9 | Frequency select pin. When FSEL is connected to GND, switching frequency is set to <br> 620kHz. When connected to $\mathrm{V}_{\text {IN }}$, switching frequency is set to 1.25 MHz |
| SS | 10 | Soft-start control pin. Connect a capacitor to control the converter start-up |
