

The 1336 REGEN Line Regeneration Package is a line regeneration option for 1336 PLUS, 1336 PLUS II, 1336 IMPACT™ and 1336 FORCE™ AC drives. In a regenerative brake configuration (bus supply configuration is also available, see page 4), the 1336 REGEN is used to remove braking energy from the DC bus of a stand-alone AC drive and return it back to the three-phase AC utility, where it is absorbed by other loads. In many regenerative applications, the 1336 REGEN offers an energy-efficient alternative to dynamic brakes and chopper module/resistor combinations.

The 1336 REGEN Line Regeneration Package consists of:

- A converter that transforms a three-phase AC input source into a DC output source.
- A precharge unit that limits the inrush current and provides AC line voltage phase and magnitude information to the converter.

A 3% 1321 Line Reactor is also required to limit current harmonics on the AC line and to provide impedance between the regenerative brake and the attached drive.

Conformity to Standards

The 1336 REGEN conforms to the following:

Standard	Conformity
UL Listed	✓
CSA Certified (C-UL)	✓

Standard Products Program

This program includes standard 1336 REGEN Line Regeneration Packages for use in regenerative brake applications rated from 48 to 180 Amps. Mounting options include IP00 (open) and IP20 (NEMA Type 1). There is a limited offering of factory mounted options, along with a larger offering of option kits for user installation. All products in this program are predefined and not generally subject to modification.

1336 REGEN Brake Example

The diagram below shows the components needed for a 1336 REGEN brake configuration at 78 Amps. Note that the 1336 REGEN precharge unit is included in the base catalog number of the 1336 REGEN Line Regeneration Package. The 3% reactor is also required to provide proper line impedance.

Factory Installed Options

Interface Options

Description	Used with	Option Code

Communication Option Kits

Description	Used with . . .	Catalog Number (Loose Kit)
 <p>GD1/GD2 – Typical Configuration</p>	All Converter Ratings	1203-GD1 ❶ 1203-GD2 ❶
 <p>GM1/GM2, GM5/GM6 – Typical Configuration</p>	All Converter Ratings	1203-GK1 ❶ 1203-GK2 ❶ 1203-GK5 ❶ 1203-GU6 ❶❷
 <p>FB1 and FM1 – Typical Configuration</p>	All Converter Ratings	1203-CN1 ❶❷
ControlNet™ to SCANport Adapter Remote Mounted (DIN Rail) – 24V DC Requires 24V DC power supply	All Converter Ratings	1203-FB1 ❷ 1203-FM1 ❶❷
Flex™ I/O SCANport Module Flex I/O Terminal Base Flex I/O Module Each FM1/FB1 combination provides a connection for up to 2 drive products.	All Converter Ratings	1203-SFC
Serial Flash Cable Connects CN1, GU6 and SSS to a computer RS-232 port for adapter programming and for DriveTools32™ & DriveExplorer™ serial interface.	All Converter Ratings	1203-SM1 ❶
SLC™ Communication Module (SLC 500 to SCANport Module) Provides a connection for up to 3 drive products.	All Converter Ratings	1203-SSS
Smart Serial to SCANport Adapter Includes 1203-SFC and 1202-C10 Cables	All Converter Ratings	1203-SNM
Serial Null Modem Adapter	All Drives	1203-USB
Universal Serial Bus™ (USB) Converter Includes 2m USB, 20-HIM-H10 & 22-HIM-H10 Cables	All Drives	

- ❶ Requires a Communication Option Cable (1202-C03/C10/C30/C90) to be functional. These units are not acceptable for NEMA Type 4 door mounting or UL Type 4X outdoor duty.
- ❷ Each Flex I/O SCANport Module requires (1) 1203-FB1 and (1) 1203-FM1.
- ❸ Adapter is programmed/configured with Windows® HyperTerminal via RS-232 using the 1203-SFC cable, (purchased separately) or using a compatible network specific software tool.

Packaged Program

Factory configured and assembled Regenerative Brake or DC Bus Supply Packages are available. Consult A-B for details.

1336 REGEN Bus Supply

The 1336 REGEN Bus Supply is available as a packaged product. The bus supply is used to provide a DC bus for several common-bus input AC drives. This configuration requires a 10% reactor and an EMI filter/3% reactor combination for high frequency noise attenuation. Contact your local Sales Office for details.
