1. KEY FEATURES

Schlüsseleigenschaften

- Bluetooth specification v2.0 + EDR (Enhanced Data Rate)
- CSR BlueCore6-ROM inside
- Complete Co-location and Co-existence with IEEE 802.11 (AWMA, AFH and SFH)
- Fast Connection Setup
- Extended SCO Link
- RF output power class 2 with power control
- Supply Voltage 3.0V to 3.6V
- Internal crystal oscillator (26MHz, 14.7456 MHz and 32 kHz for deep sleep)
- Surface mount type
 - PAN1455: 13.5 x 18.75 x 2.85 mm
 - PAN1555: 13.5 x 22.75 x 2.85 mm
- Built-in shielding to be compliant to FCC
- Full Bluetooth data rate up to 2178kbps asymmetric
- Support for all Bluetooth power saving modes (Park, Sniff, Hold)
- Support for very low-power modes (deep sleep and power down)
- Optional support for ultra-low-power mode. Standby with Battery-Backup
- PCM Interface Master / Slave supporting 13 or 16 bit linear, 8 bit μ -law or A-law Codecs and CVSD transcoders on up to 3 SCO channels
- Full 8- to 128-bit encryption
- High sensitivity design (-86 dBm typ.)
- 3 UART, USB, I2C and SPI Interface
- 18 GPIO's for individual usage for your embedded software
- 3 Channel ADC and 1 Channel DAC
- Cortex-M3 ST32F103 core for embedded profiles or application software
- Manufactured in conformance with RoHS

3. DESCRIPTION FOR THE MODULE Modulbeschreibung

PAN1455/1555 is a short-range class 2 module for implementing Bluetooth functionality into various electronic devices. The module consists of three major parts; a baseband controller, a EEPROM memory and a radio that operates in the license-free 2.45 GHz ISM band.

Communication between the module and the host controller is carried out normally via UART. Optional via below interfaces. Please contact your local sales office for further details on additional options.

4. SCOPE OF THIS DOCUMENT

Umfang dieses Dokumentes

This product specification applies to the class 2 bluetooth module ENW89815C3KF/ENW89815A3KF. The different characters indicates different versions (refer to chapter 24 Ordering Information) The used bluetooth chip is the BlueCore6 from the company CSR. (www.csr.com).

Diese Produktionsunterlagen beziehen sich auf das Class 2 Bluetooth Modul ENW89815C3KF/ENW89815A3KF.

Die unterschiedlichen Zeichen bezeichnen verschiedene Versionen (Erklärung im Kapitel 24 Ordering Information)

Der verwendete Bluetooth Chip ist der BlueCore6 der Firma CSR.

7. TERMINAL SPECIFICS Interfacebeschreibungen

7.1. RF-INTERFACE - ANT

The PAN1455 presents a 50Ω impedance on the antenna pin. If you need antenna support please e-mail to wireless@ecom.panasonic.de or use the PAN1555 with integrated ceramic antenna.

7.2. POWER SUPPLY

PAN1455/1555 require a power supply with the following characteristics:

Typical : 3.3VDC, min.: 3.0VDC – max.: 3.6VDC, low noise ($\leq 10\text{mV}$), $>80\text{mA}$ peak

Due to the technological requirements and the pulsed radio transmission the supply needs to be fed by an ultra fast (response time $\leq 20\mu\text{s}$) linear regulator placed as close as possible to the VSUP pin (16). Functionality has been verified with the following types: TOREX: XC6204x332xx or XC6401xx42xx

It is also recommended to place a low ESR capacitor with at least $10\mu\text{F}$ as close as possible to the VSUP pin (16).

NOTE: You must ensure that during operation the supply voltage never drops below 2.8 VDC. Otherwise the flash contents (firmware and/or configuration data) can get lost

7.3. POWER-ON-RESET

PAN1455/1555 are equipped with circuitry for generating Power ON/-OFF Reset from the internal core voltage. A reset is generated when the core voltage falls below typically 1.88V and is released when it rises above typically 1.92V.

In case of Power-On, Power-Off, Watchdog, Low-Power or Software, RESET# acts as an Output by holding RESET# at $\leq 0.3\text{V}$ for min. 1,5ms and max. 3,5ms.

In an application with an external Reset as an Input, for example external Reset-Controller, we recommend to use Open-Drain-Output for this circuit. An external reset shall be generated at RESET# $\leq 0.3\text{V}$ for $\geq 5\text{ms}$ after VSUP has stabilized in the recommended voltage range.

The following table shows the pin states of PAN1455/1555 on reset.

7.4. UART INTERFACE – TXD, RXD, CTS, RTS

The functionality of the interface corresponds to the V.24 / RS-232 standard on TTL-level.

Transmission speeds:

- 1200 bps
- 2400 bps
- 4800 bps
- 9600 bps

7.5. 3-WIRE SERIAL INTERFACE

When using only GND and UART_Rx, UART_Tx serial lines, you may leave UART_RTS# and UART_CTS# open.

Note: Not using flow control can result in loss of data.

7.6. USB INTERFACE^{1,2}

7.6.1. USB_DP, USB_DN

PAN1455/1555 contain a full speed USB version 2.0 compliant interface capable of directly driving an USB cable. The PAN1455/1555 operates as a USB peripheral and responds to requests from a USB master host controller.

7.7. GPIO INTERFACE

It is possible to use the programmable digital I/Os GPIO[0:17]. The Current from GPIO[17] is limited to 3mA max.

For 5V tolerant GPIO's refer to chapter 6.2.1SPP configuration DCE Mode

7.8. ADC³

It is possible to use the programmable I/Os PIO[0:3,6,7,13:15] as ADC.

The 12-bit ADC is a successive approximation analogue-to-digital converter. A/D conversion can be performed in single, continuous, scan or discontinuous mode.

7.9. DAC⁴

It is possible to use the programmable I/Os PIO[2,3] as ADAC

The DAC module is a 12-bit, voltage output digital-to-analogue converter. The DAC can be configured in 8- or 12-bit mode and may be used in conjunction with the DMA controller.

7.10. PCM INTERFACE⁵

PCM or Pulse Code Modulation is a sampling technique for digitising analogue signals.

The PCM interface for voice applications is provided via the PCM_OUT, PCM_IN, PCM_CLK and PCM_SYNC pins.

The PCM interface can act as master or as slave device.

In master mode, clock frequencies of 128kHz, 256kHz or 512kHz can be generated, when using the internal 4MHz clock. In slave mode, clock frequencies up to 2048kHz are accepted.

The Frame Clock is 8kHz. Long and Short Frame Sync are supported.

PAN1455/1555 interface directly to PCM audio devices including the following:

¹ subject to firmware support, contact Stollmann for current status.

² subject to hardware support, contact Stollmann for availability of variants

³ subject to firmware support, contact Stollmann for current status

⁴ subject to firmware support, contact Stollmann for current status

14. TYPICAL CURRENT CONSUMPTION

14.1. SPP CONFIGURATION

14.1.1. Deep Sleep State

The Bluetooth RF is completely deactivated, no paging requests from other Bluetooth devices will be recognized. Only rising control line DTR will activate the PAN1455/1555 and may initiate a Bluetooth link dependent on other parameters.

Note: In Deep Sleep state the AT command set is not active, CTS line is low.

14.1.2. Power Down State

The Bluetooth RF is activated every 1.25 seconds, paging requests from other Bluetooth devices will be recognized after that intervals and accepted if allowed. Additionally rising control line DTR will activate the PAN1455/1555 and may initiate a Bluetooth link dependent on other parameters.

Note: In Power down state the AT command set is not active, CTS line is low.

14.1.3. Idle State

No power down mode activated.

All functionality is available immediately including connection control using AT command set.

14.2. POWER CONSUMPTION

The following values are approximate power consumption values in the different states:

VSUP = 3.3V, T_{amb} = 25°C

Condition	Current Consumption		Unit
	I _{MEAN}	I _{PEAK}	
Idle, no page scan, no inquiry scan, Uart baud rate: 1200 baud	7,5	15	mA
Idle, all functions available, no Bluetooth link, page scan & inquiry scan interval 1,28s	8	56	mA
Idle, all functions available, no Bluetooth link, continuous page scans	50	60	mA

14.3. POWER-UP TIME

The time until the PAN1455/1555 is able to accept link requests or serial data depends on the firmware version and the software parameters RSTTIM and RSTMSG. In the SPP firmware version 1.001 the module is command ready after at least 0,3s (RSTTIM=3 / RSTMSG=0) and 2,16s (RSTTIM=40 / RSTMSG=1) maximum. Bluetooth links are accepted 2,3s after reset.

If you have no experience about the land pattern, this figure can guide you, but this information is given without any legal responsibility.

We recommend the same dimension for the solder paste screen.

The solder screen thickness depends on your production standard, we recommend 120µm to 150µm.

IMPORTANT:

Please be careful with the area under the module to avoid short cuts.

The bottom side from the PAN1455/1555 is fully coated, **also** the vias!

If you have any questions on this point, we are open to discuss your individual situation.

20. LABELLING DRAWING

Kennzeichnung des Moduls durch Label

This label is suitable for reflow soldering and designed for the engineering sample status.

Information in the 2D-Barcode are the date code in the format

- BT-address [12 signs, here 000000000000], (only last six digits are typed on label);
- Ordering number [12 signs, please refer also to chapter 24];
- The identifier for the software release (2 signs, here yy);
- Datecode: Year-Month-Day [6 signs, here 081211].

All items are separated by a semicolon.

ES stands for Engineering Samples, please refer to chapter General Information.

In mass production status, the ES will be eliminated.

As a summary:

zz	Identifier for the hardware version
yy	Identifier for the software version
000000	BT-Address last six digits
081211	Datecode

21. SOFTWARE

Software

We are able to deliver our modules with different software, for different customer application. Before you start your mass production, please check to your best knowledge, that the used software meets your requirements.

21.1. SPP SOFTWARE

This SPP software is from our software partner company Stollmann www.stollmann.de. Please refer to Reference [1].

21.2. HDP SOFTWARE

The Health Device Profile is under development and will be released soon.

21.3. HID SOFTWARE

The Human Interface Device Software is under development and will be released soon.

22. CAUTIONS Warnungen

Failure to do so may result in degrading of the product's functions and damage to the product.

22.1. DESIGN NOTES Designhinweise

- (1) Please follow the condition written in this specification, especially the control signals of this module.
- (2) The supply voltage has to be free of ac ripple voltage, as for example from a battery or a low noise regulator output. For noisy supply voltages provide a decoupling circuit as for example a ferrite in series connection and a blocking capacitor to ground of at least 47uF directly at the module.
- (3) This product should not be stressed when installed.
- (4) Heat is the major cause of shortening the life of these products. Please keep this product away from heat.
Avoid assembly and use of the target equipment in conditions where the products' temperature may exceed the maximum allowable.
- (5) The supply voltage should not be exceeding or reverse, and should not carry noise and spike.
- (6) Please keep this product away from other high frequency circuits.

22.2. INSTALLATION NOTES Verarbeitungshinweise

- (1) Reflow soldering is possible for twice on the condition in chapter 15.
Please set up the temperature at the soldering portion of this product according to this reflow profile.
- (2) Carefully position the products so that their heat will not burn into printed circuit boards or affect the other components that are susceptible to heat.
- (3) Carefully locate these products so that their temperatures will not increase due to the effects of heat generated by neighboring components.
- (4) If a vinyl-covered wire comes into contact with the products, then the cover will melt and generate toxic gas, damaging the insulation. Never allow contact between the cover and these products to occur.
- (5) This product should not be stressed or vibrated when reflowed.
- (6) Please keep the following conditions when you install this product for reparation by hand soldering.
- (7) Please do not wash this product.
- (8) Please refer to the recommended pattern when designing a board.
- (9) Pressing on parts of the metal cover or fastening objects to the metal cover is not allowed.

22.3. USAGE CONDITIONS NOTES Benutzerhinweise

- (1) Please take measure against static electricity.
If pulses or other transient loads (a large load applied in a short time) are applied to the products, then before use, check and evaluate their operation when assembled on your products.
- (2) Please do not use the fallen product.

- (3) Please do not put on damage and dirt to the pin , and don't touch the electric components.
- (4) Please follow the condition written in the ratings , about the power supply instruments applied to this product.
- (5) Electrode peeling strength: Do not add pressure of more than 4.9N when soldered on PCB
- (6) Pressing on parts of the metal cover or fastening objects to the metal cover is not allowed.
- (7) These products are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information and communication equipment.

22.4. STORAGE NOTES

Lagerhinweise

- (1) The module may not be stressed mechanically during storage.
- (2) Do not store these products in the following conditions or the performance characteristics of the product, such as RF performance will be adversely affected:
 - Storage in salty air or in an environment with a high concentration of corrosive gas, such as Cl₂, H₂S, NH₃, SO₂, or NOX
 - Storage in direct sunlight
 - Storage in an environment where the temperature may be outside the range of 5°C to 35°C range, or where the humidity may be outside the 45 to 85% range.
 - Storage of the products for more than one year after the date of delivery at your company if the avoidance all the above conditions (1) to (3) have been met.
- (3) Storage period: Please check the adhesive strength of the embossed tape and soldering after 6 months of storage.
- (4) Please keep this product away from water, poisonous gas and corrosive gas.
- (5) This product should not be stressed or shocked when transported.
- (6) Please follow the specification when piling up the packed crate (max. 10).

22.5. SAFETY CAUTIONS

Sicherheitshinweise

These specifications are intended to preserve the quality assurance of products as individual components.

Before use, check and evaluate their operation when mounted on your products. Abide by these specifications, without deviation when using the products. These products may short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are anticipated when a short circuit occurs, then at least, provide the following failsafe functions, as a minimum.

- (1) Ensure the safety of the whole system by installing a protection circuit and a protection device.
- (2) Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a single fault causing an unsafe status.

22.6. OTHER CAUTIONS

Weitere Hinweise

- (1) This specification sheet is copyrighted. Please do not open it to the third party.
- (2) Please do not use this product of our company for another purpose.
- (3) Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.
- (4) This product has not been manufactured with any ozone chemical controlled under the Montreal Protocol.
- (5) These products are not intended for other uses, other than under the special conditions shown below. Before using these products under such special conditions, check their performance and reliability under the said special conditions carefully to determine whether or not they can be used in such a manner.
 - In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash.
 - In direct sunlight, outdoors, or in a dusty environment
 - In an environment where condensation occurs.
 - In an environment with a high concentration of harmful gas (e.g. salty air, HCl, Cl₂, SO₂, H₂S, NH₃, and NO_x)
- (6) If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these products with new products because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.
- (7) When you have any question or uncertainty, both of you and Panasonic sincerely cope with it.

27. REGULATORY INFORMATION

27.1. FCC NOTICE

The device PAN1555, including the ceramic antenna (ENW89815C3KF) and also the SMD type PAN1455 (ENW89815A3KF), including with the antennas, which are listed in 27.5, complies with Part 15 of the FCC Rules. The device meets the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407.transmitter Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

27.2. CAUTION

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Panasonic Electronic Devices Europe GmbH may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

27.3. LABELING REQUIREMENTS

The Original Equipment Manufacturer (OEM) must ensure that FCC labeling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Panasonic FCC identifier for this product as well as the FCC Notice above. The FCC identifier are **FCC ID: T7V-BC06**. This FCC identifier is valid for both versions, for details, please see the chapter 24. Ordering Information.

In any case end product must be labelled exterior with "Contains FCC ID: T7V-BC06"

27.4. ANTENNA WARNING

The related part number for this device is ENW89815A3KF (PAN1455 with SMD pad). For details, please see the chapter 24. Ordering Information. This device are tested with a standard SMA connector and with the antennas listed below. When integrated in the OEMs product, these fixed antennas require installation preventing end-users from replacing them with non-approved antennas. Any antenna exceeding 2dBi not in the following table must be tested to comply with FCC Section 15.203 for unique antenna connectors and Section 15.247 for emissions. The FCC identifier for this device with the antenna listed in item 1 are the same (FCC ID: T7V-BC06).

27.5. APPROVED ANTENNA LIST

Note: We are able to qualify your antenna and will add to this list as that process is completed.

Item	Part Number	Manufacturer	Frequency Band	Type	Gain (dBi)
1	WIMO17010.10	Wimo	2.4GHz	ROD	+2
2					

27.6. RF EXPOSURE PAN1455/PAN1555

To comply with FCC RF Exposure requirements, the Original Equipment Manufacturer (OEM) must ensure that the approved antenna in the previous table must be installed.

The preceding statement must be included as a CAUTION statement in manuals for products operating with the approved antennas in the previous table to alert users on FCC RF Exposure compliance.

Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of PAN1455 with mounted ceramic antenna (FCC ID: T7V-BC06) is far below the FCC radio frequency exposure limits. Nevertheless, the PAN1455 shall be used in such a manner that the potential for human contact during normal operation is minimized.

End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

27.7. INDUSTRY CANADA CERTIFICATION

PAN1455/PAN1555 comply with the regulatory requirements of Industry Canada (IC), license:

IC: 216Q-BC06

Manufacturers of mobile, fixed or portable devices incorporating this module are advised to clarify any regulatory questions and ensure compliance for SAR and/or RF exposure limits. Users can obtain Canadian information on RF exposure and compliance from

www.ic.gc.ca

This device has been designed to operate with the antenna listed in section 27.5 above, having a maximum gain of 2.0 dBi. Antennas not included in this list or having a gain greater than 2.0 dBi are strictly prohibited for use with this device. The required antenna impedance is 50 ohms. The antenna used for this transmitter must not be colocated or operating in conjunction with any other antenna or transmitter.
