

Series 675 DIP Program Headers

FEATURES

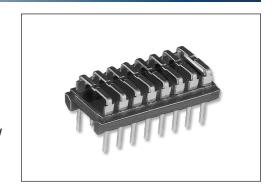

- Aries DIP programmable headers offer unusual versatility for programming within the header itself
- They can be individually programmed using cutters or Aries programming tool, P/N T-675, available separately, to remove the interconnecting sections. Consult <u>Data</u>
 Sheet 22002 for Aries programming tool
- Adjacent and/or opposing pins are interconnected until the pre-slotted section is programmed out. An almost infinite number of programs can be attained by merely leaving or removing interconnecting sections
- A low profile, snap-on cover protects header from dirt or accidental damage, and can be marked to identify the program within the header
