# Capacitive Sensor Switch Control IC 

## BU21009MUV

## - Description

BU21009MUV is the capacitive sensor controller for the switch function and slider function with 16 channels sensors.
All channels are calibrated for the slider functions. So this is useful for 16 switches application, too.
LED driver is available (No PWM function).

## - Features

1) Slider function
2) LED driver available
3) 2 wire serial interface
4) Power supply $=2.5 \mathrm{~V}$ to 3.3 V , $\mathrm{I} / \mathrm{O}$ power supply $=1.7 \mathrm{~V}$ to 3.3 V
5) Integrated 10bit AD converter, clock and reset
6) Package VQFN032V5050
-Applications
It is possible to use it widely as a switch/slider such as a Mobile phone, Portable equipment, and Audiovisual apparatuses.

- Absolute Maximum Ratings ( $\mathrm{Ta}=25^{\circ} \mathrm{C}$ )

| PARAMETER | SYMBOL | RATING |  | UNIT |
| :--- | :---: | :---: | :---: | :---: |
|  |  | MIN | MAX |  |
| APPLIED VOLTAGE | AVDD | -0.3 | 4.5 |  |
|  | DVDD | -0.3 | AVDD +0.3 | V |
| INPUT VOLTAGE | VAIN | -0.3 | DVDD+0.3 |  |
|  | VDIN | -0.3 | 125 | ${ }^{\circ} \mathrm{C}$ |
| STORAGE TEMPERATURE RANGE | Tstg | -55 | mW |  |
| POWER DISSIPATION | Pd | 304 |  |  |

Ambient temperature reduces a permission loss by 3.1 mW per case more than 25 degrees Celsius, 1 degree Celsius

- Recommended Operating conditions

| PARAMETER | SYMBOL | RATING |  |  | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | MIN | TYP | MAX |  |
| APPLIED VOLTAGE | AVDD | 2.5 | 3.0 | 3.3 | V |
|  | DVDD | 1.7 | 3.0 | 3.3 | V |
| OPERATINGTEMPERATURE RANGE | Topr | -40 | 25 | 85 | ${ }^{\circ} \mathrm{C}$ |

- Electrical characteristics(Especially, Topr $=25^{\circ} \mathrm{C}$ and AVDD=DVDD $=0$ as long as it doesn't specify it.)

| PARAMETER | SYMBOL | RATING |  |  | UNIT | Condition |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | MIN | TYP | MAX |  |  |
| H INPUT VOLTAGE | Vihio | DVDDx0.8 | - | DVDD+0.3 | V |  |
| L INPUT VOLTAGE | VILIO | DVSS-0.3 | - | DVDDx0. 2 | V |  |
| Output "H" voltage | Vонı | DVDD-0.7 | - | DVDD | V | $\mathrm{IOH}=-2[\mathrm{~mA}]$. Overshoot is excluded. |
| Output "L" voltage | Volled | AVSS | - | 0.5 | V | $\mathrm{IOL}=8[\mathrm{~mA}]$. Undershoot is excluded. LED output. |
|  | Voltxd | DVSS | - | 0.5 |  | loL=3[mA]. Undershoot is excluded. SDA/TXD application. |
|  |  |  |  | DVDDx0.3 |  |  |
|  | Volint | DVSS | - | 0.5 |  | loL=2[mA]. Undershoot is excluded. INT application. |
| Input leakage current | IIz | -1 | - | 1 | $\mu \mathrm{A}$ |  |
| Off leakage current | Ioz | -1 | - | 1 | $\mu \mathrm{A}$ |  |
| Standby current | Ist | - | - | 2 | $\mu \mathrm{A}$ | Shutdown (SDN="L") |
| Current of operation | IDD | - | 300 | - | $\mu \mathrm{A}$ |  |

-A/D Converter

| PARAMETER | SYMBOL | RATING |  |  | UNIT | Condition |

- Block Diagram, Pin configuration

- Sensor I/F CV translate circuit

This module selects between sensor inputs. The selection sequences between all 16 channels.

## - AD Conversion

The voltage into which CV is converted is converted into a digital value.
Conversion is 10 bit and full scale corresponds to AVDD.

- Conversion sequence control

Performs timing generation for the analogue circuitry and a sequencer circuit for selection of the sensor channel for conversion.

- Data correction and making to format

This module provides the digital intelligence of the sensor.
The block includes, amongst other things, scaling, adding offsets and input filtering for de-bouncing.
Registers are formatted to simplify usage by the softwareapplication.
The block implements auto-calibration to manage drift in temperature, process variation, voltage variation and aging effects.

- Data register

This stores the results for the software application. Please refer to the register map for details.

- HOST I/F

2 wire serial interface.

- Power management

The power management block provides smart power control.
When the sensors are not in use, the Controller automatically transitions into a low-power mode.
When a sensor is touched, then the device automatically wakes up and enters its normal operation.
The chip drives an INT pin for alerting the controller device in this case.

- Reset generation

The circuit is initialized by a either a soft reset command or by the external SDN pin.

- Clock generation

The device has an internal oscillator.
Provision is also made if the application would like to make use of an external clock input.
-Pin Description

| Pin <br> No. | Name | I/O | Function | Note | Supply Reference | Reset Level | I/O Pad |

## - HOST I/F

- 2 wire serial, BUS (Pin configuration, MODE [1:0] =00b)

Slave mode only
Slave Address = 5Ch,5Dh selection possible.
Normal (Normal mode. 100kHz Transfer rate)
Fs mode (Fast mode. 400kHz Transfer rate) also.
Not adapting sequential read / write.

## 【Data format】

| Parameter | Standard mode |  | High Speed mode |  | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | MIN | MAX | MIN | MAX |  |
| fSCL: SCL Clock Freq | 0 | 100 | 0 | 400 | kHz |
|  | 4.0 | - | 0.6 | - | $\mu \mathrm{sec}$ |
| tLow : SCL "L" | 4.7 | - | 1.3 | - | $\mu \mathrm{sec}$ |
| $\mathrm{t}_{\text {HIGH }}$ : SCL "H" | 4.0 | - | 0.6 | - | $\mu \mathrm{sec}$ |
| $\mathrm{t}_{\text {HD; }{ }_{\text {DAT }} \text { : Data hold time }}$ | 0.1 | 3.45 | 0.1 | 0.9 | $\mu \mathrm{sec}$ |
| $\mathrm{t}_{\text {SU;DAT }}$ : Data setup time | 0.25 | - | 0.1 | - | $\mu \mathrm{sec}$ |
| $\mathrm{t}_{\text {Su; }}$ STo : START condition hold time | 4.0 | - | 0.6 | - | $\mu \mathrm{sec}$ |
| $\mathrm{t}_{\text {BUF }}$ : Free time of bus between STOP condition and START condition | 4.7 | - | 1.3 | - | $\mu \mathrm{sec}$ |

## [PROTOCOL]

- Write Protocol

- Read Protocol

| Address | Register name | R/W | Length | Explanation |
| :---: | :---: | :---: | :---: | :---: |
| 1*h | SENS_DATA | R | 1byte / channel | Sensor output data. One for each channel. |
| 30h | POSX | R | 1 byte | X positional value axially. |
| 31h | POSY | R | 1 byte | Y positional value axially. |
| 32h, 33h | BTN | R | 2byte | Button On/Off. |
| 4*h | OFFSET | R | 1byte / channel | Offset correction data. One for each channel. |
| ECh | POS_MODE | W | 1 byte | XY matrix setting. |
| EDh | RESET | W | 1byte | Soft reset execution. |
| EEh | CALIB | W | 1 byte | Soft calibration execution. |
| EFh | DONE | W | 1 byte | Setting done command. |
| F0h, F1h | SENS_CH | W | 2byte | Sensor channel enables. |
| F2h | LED_CH | W | 1 byte | LED channel enables. |
| F3h, F4h | IDLE_CH | W | 2byte | Idle mode release control. |
| F5h | LED_LINK | W | 1 byte | LED linkage to sensor input. |
| F6h | TIMES | W | 1byte | Defines the sampling interval and number of samples required to recognize a button press. |
| F7h | TH_ON2 | W | 1byte | A second threshold value in the detection of a button going from OFF state to ON state. |
| F8h, F9h | TH_ON2_CH | W | 2byte | Per channel selection of whether to use TH_ON or TH_ON2. |
| FAh | CMD | W | 1 byte | Simultaneous press and idle mode entry. |
| FBh | GAIN_FILTER | W | 1 byte | Gain setting, filter function. |
| FCh | TH_ON | W | 1 byte | A threshold value in the detection of a button going from OFF state to ON state. |
| FDh | TH_OFF | W | 1byte | A threshold value in the detection of a button going from ON state to OFF state. |
| FEh | DLED | W | 1 byte | Register to allow simple writing to LEDs. |

## 【1＊h ：Sensor Output Data】

Name：SENS＿DATA
Address：$\quad$ 1＊$^{\mathrm{h}}$（one byte per sensor channel）
Description：The sensor output that converts to 10bit．Scaling，offsets and filtering（when enabled）are applied． The most significant 8 bits are presented to the software with this register．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $1 * h$ | $\mathrm{SD}_{\star}{ }^{*}[7]$ | $\mathrm{SD}_{-}{ }^{*}[6]$ | $\mathrm{SD}_{-}{ }^{*}[5]$ | $\mathrm{SD}_{-}^{*}[4]$ | $\mathrm{SD}_{-}{ }^{*}[3]$ | $\mathrm{SD}^{*}[2]$ | $\mathrm{SD}^{*}{ }^{*}[1]$ | $\mathrm{SD}_{-}{ }^{*}[0]$ |
| $\mathrm{R} / \mathrm{W}$ | R | R | R | R | R | R | R | R |
| Initial val． | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

【30h ：X positional value axially】
Name：POSX
Address：30h
Description：This represents the X－position of the press．The value is calculated differently depending on the matrix arrangement．For example when：
－When POS＿MODE［0］＝0：Value interprets SIN［0：7］
－When POS＿MODE［0］＝1：Value interprets SIN［10：5］

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 30h | 0 | 0 | D5 | D4 | D3 | D2 | D 1 | D 0 |
| R／W | R | R | R | R | R | R | R | R |

【31h ：Y positional value axially】
Name：POSY
Address：31h
Description：This represents the Y－position of the press．The value is calculated differently depending on the matrix arrangement．For example when：
－When POS＿MODE［0］＝0：Value interprets SIN［8：15］
－When POS＿MODE［0］＝1 ：Value interprets SIN［11：4：12：3：13：2：14：1：15：0］

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 31h | 0 | D6 | D5 | D4 | D 3 | D 2 | D 1 | D 0 |
| R／W | R | R | R | R | R | R | R | R |

【32h／33h ：Button ON／OFF】
Name：BTN
Address：$\quad 32 \mathrm{~h}, 33 \mathrm{~h}$
Description：This is the state of the sensor when considered as an ON／OFF button．Here 1 ：On． 0 ：Off．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 32h | CH 7 | CH 6 | CH 5 | CH 4 | CH 3 | CH 2 | CH 1 | CH 0 |
| 33h | CH 15 | CH 14 | CH 13 | CH 12 | CH 11 | CH 10 | CH 9 | CH 8 |
| R／W | R | R | R | R | R | R | R | R |
| Initial val． | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

## 【4＊h ：Offset Correction Data】

Name：OFFSET
Address：$\quad 4^{*} \mathrm{~h}$（one byte per sensor channel）
Description：This is the offset required to correct the sense data to half scale during the calibration procedure．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $4^{*} \mathrm{~h}$ | OFS＿＊［7］ | OFS＿＊［6］ | OFS＿＊［5］ | OFS＿＊［4］ | OFS＿＊［3］ | OFS＿＊［2］ | OFS＿＊［1］ | OFS＿＊［0］$^{\text {OFS }}$ |
| R／W | R | R | R | R | R | R | R | R |
| Initial val． | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

【ECh ：XY matrix setting】
Name：POS＿MODE
Address：ECh
Description：Setting when two or more sensor are displayed to the first origin and position is detected．
XY ：This selects between two matrix configurations．
$1=X$ axis $\rightarrow$ SIN $[10: 5], Y$ axis $\rightarrow \operatorname{SIN}$ [11:4:12:3:13:2:14:1:15:0]
$0=X$ axis $\rightarrow$ SIN $[0: 7], Y$ axis $\rightarrow \operatorname{SIN}[8: 15]$

POS＿EN ：The position tracking enable
Enables the condition under which the position tracking is made effective．
$1=$ When either of sensor exceeds the threshold，the data of the position tracking is made effective．
If all registers do not exceed the threshold，the data of the position tracking is（POSX，POSY）$=(0,0)$ ．
$0=$ the position is detected regardless of the level of the sensor data，and data is made effective．
Initial state：When either of sensor exceeds the threshold，the positional detection data is made effective（＝1）．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ECh | - | - | - | - | - | - | POS＿EN | XY |
| R／W | - | - | - | - | - | - | W | W |
| Initial val． | - | - | - | - | - | - | 1 | 1 |

## 【EEh ：Soft Calibration】

Name：CALIB
Address：EEh
Description：This forces a chip re－calibration when a 1 is written and returns to 0 afterward automatically．Please note that one should always re－calibrate after changing the gain adjustment value．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| EEh | - | - | - | - | - | - | - | CALIB |
| R／W | - | - | - | - | - | - | - | W |
| Initial val． | - | - | - | - | - | - | - | 0 |

## 【EFh ：Setting Done，Detect Start】

Name：DONE
Address：EFh
Description：This register should be written to following register updates．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| EFh | - | - | - | - | - | - | - | DONE |
| R／W | - | - | - | - | - | - | - | W |
| Initial val． | - | - | - | - | - | - | - | 0 |

## 【F0h／F1h ：Sensor Channel Setting】

Name：$\quad$ SENS＿CH
Address：F0h／F1h
Description：Individual enabling and disabling of sensor channels．1：Effective 0：Not in use

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F0h | SIN7 | SIN6 | SIN5 | SIN4 | SIN3 | SIN2 | SIN1 | SIN0 |
| F1h | SIN15 | SIN14 | SIN13 | SIN12 | SIN11 | SIN10 | SIN9 | SIN8 |
| R／W | W | W | W | W | W | W | W | W |
| Initial val． | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

## 【F2h ：LED Channel Setting】

Name：LED＿CH
Address：F2h
Description：Enables and disables the channels to be used as LED outputs．Valid for the 8 LED outputs． 1：Effective 0：Not in use

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F2h | LED7 | LED6 | LED5 | LED4 | LED3 | LED2 | LED1 | LED0 |
| R／W | W | W | W | W | W | W | W | W |
| Initial val． | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

## 【F3h／F4h ：Idle Exit Condition】

Name：IDLE＿CH
Address：F3h／F4h
Description：Defines which channels cause the device to wake up－i．e．
go from idle mode to normal operation on a key press．Selection is made on a per channel basis．
1：Effective 0：Not used

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F3h | SIN7 | SIN6 | SIN5 | SIN4 | SIN3 | SIN2 | SIN1 | SIN0 |
| F4h | SIN15 | SIN14 | SIN13 | SIN12 | SIN11 | SIN10 | SIN9 | SIN8 |
| R／W | W | W | W | W | W | W | W | W |
| Initial val． | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |

【F5h ：LED to Sensor Linkage】
Name：LED＿LINK
Address：F5h
Description：Allows the LED outputs to be automatically linked to the input channels without need for any software control．
1 ：It synchronizes with the button． 0 ：It synchronizes with data（The register name：DLED）from host．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F5h | LED7 | LED6 | LED5 | LED4 | LED3 | LED2 | LED1 | LED0 |
| R／W | W | W | W | W | W | W | W | W |
| Initial val． | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |

## 【F6h：Sampling Interval】

Name：TIMES
Address：F6h
Description：Defines the sampling interval．

## SAMP［1：0］：Sampling Interval

Given by the following equation ：
Sampling interval $=$ system clock $\times 2^{13} \times$ SAMP（Example：system clock $1[\mathrm{MHz}]$ time ：About $8.2[\mathrm{msec}]$ ）．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F6h | - | - | - | - | - | - | SAMP［1］ | SAMP［0］ |
| R／W | - | - | - | - | - | - | W | W |
| Initial val． | - | - | - | - | - | - | 0 | 0 |

【F7h ：Button OFF $\rightarrow$ ON Threshold】
$\begin{array}{ll}\text { Name：} & \text { TH＿ON2 } \\ \text { Address：} & \text { F7h }\end{array}$
Description：A second threshold value for determining a button off $\rightarrow$ on judgment of sensor． The sensor output value of 8bit（register SENS＿DATA）is compared with 128＋ON2［6：0］， and if it is larger，the button is determined active．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F7h | - | ON2［6］ | ON2［5］ | ON2［4］ | ON2［3］ | ON2［2］ | ON2［1］ | ON2［0］ |
| R／W | - | W | W | W | W | W | W | W |
| Initial val． | - | 0 | 0 | 1 | 0 | 0 | 0 | 0 |

【F8h／F9h ：Button OFF $\rightarrow$ ON Threshold Selection】
Name：TH＿ON2＿CH
Address：$\quad \mathrm{F} 8$ h／F9h
Description：This register is used to relate either threshold TH＿ON or TH＿ON2 to particular sensor channels for button press activity determination． 1 ：TH＿ON2 is applied $0:$ TH＿ON is applied

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 【FAh ：Simultaneous Press and Idle Mode Entry】

| Name： | CMD |
| :--- | :--- |
| Address： | FAh |
| Description： |  |

INTERMIT＿EN ：Intermittent and the drive are enable．：
Whether intermittent is driven at the idol mode is selected．
1 ：Intermittent is driven． 0 ：Intermittent is not driven．Initial state ：Intermittent is driven．

## IDLE T［3：0］：non－detect time－out setting

This sets the time the chip takes to go from normal mode to idle mode in a period key inactivity． Duration $=$ system clock $\times 2{ }^{19} \times$ IDLE＿T $\quad$（Example of system clock 1［MHz］time ：About $\left.520[\mathrm{msec}]\right)$

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |

## 【FBh ：Gain Setting，Filter Function】

Name：GAIN＿FILTER
Address：FBh
Description：Gain adjustment and setting of noise filter function．

## GAIN［2：0］：gain setting ：

It uses it for the gain adjustment in eight stages．Initial adjustment value ：x1

| GAIN［2：0］ | 000 | 001 | 010 | 011 | 100 | 101 | 110 | 111 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Adjustment value | $\times 1$ | $\times 4.22$ | $\times 8.4$ | $\times 16.5$ | $\times 23$ | $\times 46$ | $\times 69$ | $\times 92$ |

## FILTER＿EN ：Filter enable ：

Enables／disables setting of noise filter function
1 ：enabled 0 ：disabled Initial state ：disabled
DELTA［3：0］：Filter follow count setting
The follow count to which the noise filter function is effective is set．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| FBh | GAIN［2］ | GAIN［1］ | GAIN［0］ | FILTER＿EN | DELTA［3］ | DELTA［2］ | DELTA［1］ | DELTA［0］ |
| R／W | W | W | W | W | W | W | W | W |
| Initial val． | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 0 |

## 【FCh ：Switch OFF－＞ON Threshold】

Name：TH＿ON
Address： $\mathrm{FC} \bar{h}$
Description：This register provides a threshold value for determining if a sensor has transitioned from OFF to ON． This is relative value from reference value（128d）．So the absolute value of threshold is $128 \mathrm{~d}+\mathrm{ON}[6: 0]$ ． It makes a threshold value between TH＿ON and TH＿OFF． TH＿ON must be bigger than TH＿OFF（TH＿ON＞＝TH＿OFF） Maximum threshold is 256 d and minimum value is 128 d ．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| FCh | - | ON［6］ | ON［5］ | ON［4］ | ON［3］ | ON［2］ | ON［1］ | ON［0］ |
| R／W | - | W | W | W | W | W | W | W |
| Initial val． | - | 0 | 0 | 1 | 0 | 0 | 0 | 0 |

## 【FDh ：Switch ON－＞OFF Threshold Value】

Name：TH＿OFF
Address：FDh
Description：This register provides a threshold value for transitioning from ON to OFF．
This is relative value from reference value（128d）．So absolute value of threshold is128d＋OFF［6：0］．
It makes a threshold value between TH＿ON and TH＿OFF．
TH＿OFF must be smaller than TH＿ON（TH＿OFF $=<\mathbf{T H} \_O N$ ）
Maximum value is 256 d and minimum value is 128 d ．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| FDh | - | OFF［6］ | OFF［5］ | OFF［4］ | OFF［3］ | OFF［2］ | OFF［1］ | OFF［0］ |
| R／W | - | W | W | W | W | W | W | W |
| Initial val． | - | 0 | 0 | 0 | 0 | 0 | 0 | 1 |

## 【FEh ：LED Port Data】

Name：DLED
Address：FEh
Description：When LED is not linked with the sensor，it becomes a simple digital output that controls the LED． 1 ：Light． 0 ：Turned off．

|  | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| FEh | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |
| R／W | W | W | W | W | W | W | W | W |
| Initial val． | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

－Operation mode
This IC has a normal mode，idle mode and a shutdown mode as states of operation．

## 【Normal mode】

This is the normal operation of the device．Output pin INT＝＂L＂．

## 【Idle mode】

This is the mode when the normal mode times out due to inactivity on the keys．In this mode the control interface is still alive．

[^0]
## 【Shutdown mode】

In this mode the device is completely stopped－and reset．This is achieved by making the terminal SDN L．All analog circuits and the logic circuits are stopped．The return from the shutdown mode returns by making the terminal SDN H．
＊After shut－down all registers have their default values．
－Interface and system clock selection
I／F selection with MODE［1：0］pin．System clock selection by RXD．
【Using 2wires serial bus mode（MODE［1：0］＝00b）】
The 2wires serial bus is used for host I／F．
RXD＝0 in the system clock：Built－in oscillator is used．
RXD＝1 in the system clock：The clock input from CLK＿EXT is used．
－Initialization procedure
A normal power on sequence is：
（1）Power on
（2）Setup the registers
（3）Write＇1＇to 0xEF（done register）
＜sensing operation begins after auto－calibration occurs＞
－Power supply turning on procedure
You should always power on DVDD at the same time as AVDD or before AVDD．

## -Ordering part number

Package MUV : VQFN032V5050

Packaging and forming specification E2: Embossed tape and reel

## VQFN032V5050

(Unit : mm)
<Tape and Reel information>
$\left.\begin{array}{|l|l|}\hline \text { Tape } & \text { Embossed carrier tape } \\ \hline \text { Quantity } & \text { 2500pcs } \\ \hline \begin{array}{l}\text { Direction } \\ \text { of feed }\end{array} & \begin{array}{l}\text { E2 } \\ \text { (The direction is the 1pin of product is at the upper left when you hold } \\ \text { reel on the left hand and you pull out the tape on the right hand }\end{array}\end{array}\right)$

## Notes

No copying or reproduction of this document, in part or in whole, is permitted without the consent of ROHM Co.,Ltd.

The content specified herein is subject to change for improvement without notice.
The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.
While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.

[^0]:    ＊Usually time－out is aimed at about 200 msec or less．
    ＊Transition between normal and idle modes is automatic and without software control．
