*3: I_{S1} is specified at the 5% drop point of output voltage V_O on the condition that V_{IN} = overcurrent protection starting current, I_O = 10 mA.
*4: Output is OFF when the output control terminal V_C is open. Each input level is equivalent to LS-TTL level. Therefore, the device can be driven directly by LS-TTLs.
*5: SI-3000KFE cannot be used in the following applications because the built-in foldback-type overcurrent protection may cause errors during start-up stage.
(1) Constant current load (2) Positive and negative power supply (3) Series-connected power supply (4) V_O adjustment by raising ground voltage

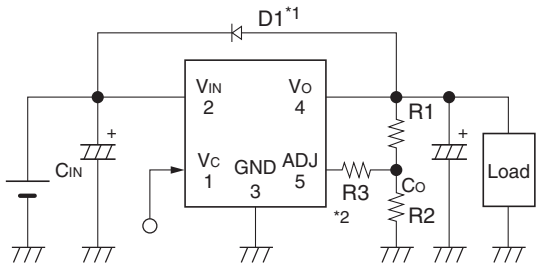
■Typical Connection Diagram

●SI-3010KFE



CIN: Input capacitor (22μF or larger)
CO: Output capacitor (47μF or larger)
If a low ESR capacitor (such as a ceramic capacitor) is used for the output capacitor, oscillation may occur.

*1. D1: Reverse bias protection diode
This diode is required for protection against reverse biasing between the input and output.
(Sanken RU2Z is recommended.)

R1, R2: Output voltage setting resistors
The output voltage can be adjusted by connecting R1 and R2 as shown above.
The recommended value for R2 is 10kΩ.

$R1=(V_O-V_{ADJ})\div(V_{ADJ}/R2)$

*2: For SI-3010KFE, insert R3 in case of setting VO to VO ≤ 1.5V.
The recommended value for R3 is 10kΩ.
