1 AMP LOW DROPOUT REGULATOR FOR 5V TO 3.3V CONVERSION

FEATURES

- **OUTPUT VOLTAGE SPECIFIED OVER TEMPERATURE RANGE**
- **EXCELLENT LOAD REGULATION**
- **GUARANTEED 1A OUTPUT CURRENT**
- **BUILT IN PROTECTION AGAINST EXCESS TEMPERATURE**
- **SHORT CIRCUIT PROTECTED**

The LM3940 is a 1A low dropout regulator designed to provide 3.3V from a 5V supply. It is a true low dropout regulator, it can hold its 3.3V output in regulation with input voltages as low as 4.5V.

The regulator is available in a variety of hermetically sealed packages and has the option of being screened to both JAN and Space levels

ABSOLUTE MAXIMUM RATINGS[1] (T_{case} = 25°C unless otherwise stated)

1) Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device outside of its rated operating conditions.

2) Dropout voltage is defined as the input-output differential voltage where the regulator output drops to a value that is 100 mV below the value that is measured at V_{IN} = 5V.

3) Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown.
