## iC-PT 3320 preliminary 6-CH. PHASED ARRAY OPTO ENCODER (33-2000)

Haus

#### FEATURES **APPLICATIONS** Monolithic photodiode array with excellent signal matching Incremental encoder Very compact size for small encoders **BLDC** motor commutation Moderate track pitch for relaxed assembly tolerances Low noise signal amplifiers with high EMI tolerance Single-pin programming of 3 operating modes: analog, digital, and x2 interpolation A-AND-B gated Z index signal Complementary outputs: A, B, Z and NA, NB, NZ U, V, W commutation signals (digital/analog) All outputs +/- 4 mA push-pull, current-limited and short-circuit-proof PACKAGES LED power control with 40 mA high-side driver Single 3.5 V to 5.5 V operation, low power consumption Operating temperature range of -40 to +85 °C (optional -40 to +120 °C) Suitable code disc: PT4S 33-2000 (glass) OD Ø33.2 mm, ID Ø13.0 mm, optical radius 14.5 mm, 2000 ppr and 3 ppr commutation (120°) optoQFN32 5 mm x 5 mm x 0.9 mm

Haus

#### DESCRIPTION

iC-PT 3320 is an optical sensor IC with integrated photosensors whose signals are converted into voltages by low-noise transimpedance amplifiers. Precise voltage comparators with hysteresis are used to generate the digital signals, supplied to the output pins via differential +/- 4 mA push-pull drivers.

The built-in LED power control with its 40 mA driver stage permits a direct connection of the encoder LED. Regardless of aging or changes in temperature the received optical power is kept constant. An external resistor presets the photocurrent operating point and thus the desired illumination level.

Selection input SEL chooses for three different operating modes: regular A/B operation, A/B operation with 2-fold interpolation, or analog operation. With analog operation the amplified signal voltages are available at the outputs for inspection and monitoring encoder assembly.

Typical applications of iC-PT devices are incremental encoders for motor feedback and commutation. To this end, device version iC-PT 3320 provides differential A/B tracks and a differential index track, each consisting of multiple photo sensors. The layout of the signal amplifiers is such that there is an excellent paired channel matching, eliminating the needs for signal calibration in most cases.

Additionally, three more tracks are provided to generate motor commutation information for the U, V and W outputs, for instance with 120 degree phase shift to operate 3-phase brushless motors (period count and phase shift can be varied by the code disc applied).

| 20   |            | Push-Pull Output V / Test Signal V   |
|      | TIP        | Positive Test Current Input  |
| 22   | -          | Push-Pull Output U / Test Signal U   |
| -    | n.c.       |  |
|      | GND        | Ground   |
| 2532 | n.c.       |  |
|      | BP         | Backside Paddle  |

Pin numbers marked n.c. are not in use. The backside paddle is not intended as an electrical connection point; when used as shield a single link to GND is permissible. The test pins TIP and TIN may remain unconnected. Capacitive pin loads must be avoided when using the analog test signals for alignment purposes.

### iC-PT 3320 6-CH. PHASED ARRAY OPTO ENCODER (33-2000)

Haus

#### **Z INDEX SIGNAL**

preliminary

Figure 1: A-AND-B gated Z index signal at x1 interpolation (SEL = lo)

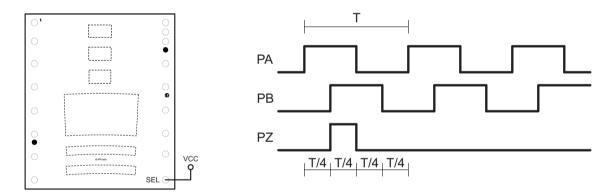

Figure 2: A-AND-B gated Z index signal at x2 interpolation (SEL = hi)

#### APPLICATION CIRCUITS

For encoder circuit examples, refer to the data sheet of iC-PT3313, available separately.

iC-Haus expressly reserves the right to change its products and/or specifications. An info letter gives details as to any amendments and additions made to the relevant current specifications on our internet website www.ichaus.de/infoletter; this letter is generated automatically and shall be sent to registered users by email

Copying - even as an excerpt - is only permitted with iC-Haus' approval in writing and precise reference to source.

iC-Haus does not warrant the accuracy, completeness or timeliness of the specification and does not assume liability for any errors or omissions in these materials.

The data specified is intended solely for the purpose of product description. No representations or warranties, either express or implied, of merchantability, fitness for a particular purpose or of any other nature are made hereunder with respect to information/specification or the products to which information refers and no guarantee with respect to compliance to the intended use is given. In particular, this also applies to the stated possible applications or areas of applications of the product.

iC-Haus conveys no patent, copyright, mask work right or other trade mark right to this product. iC-Haus assumes no liability for any patent and/or other trade mark rights of a third party resulting from processing or handling of the product and/or any other use of the product.

As a general rule our developments, IPs, principle circuitry and range of Integrated Circuits are suitable and specifically designed for appropriate use in technical applications, such as in devices, systems and any kind of technical equipment, in so far as they do not infringe existing patent rights. In principle the range of use is limitless in a technical sense and refers to the products listed in the inventory of goods compiled for the 2008 and following export trade statistics issued annually by the Bureau of Statistics in Wiesbaden, for example, or to any product in the product catalogue published for the 2007 and following exhibitions in Hanover (Hannover-Messe).

We understand suitable application of our published designs to be state-of-the-art technology which can no longer be classed as inventive under the stipulations of patent law. Our explicit application notes are to be treated only as mere examples of the many possible and extremely advantageous uses our products can be put to.
