

### Features

- Very Low Dropout Voltage
- Low Current Consumption: Typ. 50µA
- Output Voltage: 3.3V
- Guaranteed 600mA Output
- Input Range up to 5.5V
- Current Limit Protection
- Stable with either electrolytic capacitor or low-ESR MLCC (multi-layer ceramic capacitor) Low Temperature Coefficient
- SOP-8L and SOT89-3L: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish / RoHS Compliant (Note 1)

### General Description

The AP7215 low-dropout linear regulator operates from a 3.3V to 5.5V supply and delivers a guaranteed 600mA continuous load current.

The high-accuracy output voltage is preset to an internally trimmed voltage. An active-low open-drain reset output remains asserted for at least 20ms (TYP) after input voltage rises above the reset threshold.

The space-saving SOP-8L and SOT89-3L package are suitable for "pocket" and hand-held applications.

### Applications

- HD/Blue-Ray DVD & MP3/4 Players
- Mobile Handsets and Smart Phones
- Digital Still Camera
- Hand-Held Computers

### Ordering Information

Device	Package Code	Packaging (Note 2)	13" Tape and Reel	
			Quantity	Part Number Suffix
 AP7215-33SG-13	S	SOP-8L	2500/Tape & Reel	-13
 AP7215-33YG-13	Y	SOT89-3L	2500/Tape & Reel	-13

Notes: 1. EU Directive 2002/95/EC (RoHS). All applicable RoHS exemptions applied, see *EU Directive 2002/95/EC Annex Notes*.  
 2. Pad layout as shown on Diodes Inc. suggested pad layout document AP02001, which can be on our website at <http://www.diodes.com/datasheets/ap02001.pdf>.

### Pin Assignments

(1) SOP-8L

(2) SOT89-3L

### Pin Descriptions

Pin Name	Pin No.		Description
	SOP-8L	SOT89-3L	
NC	1, 3, 5	-	No Connection
$VR_{OUT}$	2	3	Voltage Output
$V_{IN}$	4	2	Supply Voltage
$VD_{OUT}$	6	-	VD Output Voltage (Reset Output)
GND	7	1	Ground
EN	8	-	Enable ( $VR_{OUT}$ ON/OFF)

## Block Diagram

## Absolute Maximum Ratings

Symbol	Parameter	Rating	Unit	
ESD HBM	Human Body Model ESD Protection	2	KV	
ESD MM	Machine Model ESD Protection	350	V	
$V_{IN}$	Input Voltage	+6	V	
$V_{R_{OUT}}$	Output Voltage	$GND - 0.3 \sim V_{IN} + 0.3$	V	
$T_{J(MAX)}$	Maximum Junction Temperature	150	°C	
$P_D$	Power Dissipation	SOP-8L	1.2	W
		SOT89-3L	0.79	W

## Recommended Operating Conditions

Symbol	Parameter	Min	Max	Unit
$V_{IN}$	Input Voltage	3.3	5.5	V
$I_{OUT}$	Output Current	0	600	mA
$T_J$	Operating Junction Temperature Range	-40	125	°C
$T_A$	Operating Ambient Temperature	-40	85	°C

**Electrical Characteristics**

( $T_A = 25^\circ\text{C}$ ,  $C_{IN} = 1\mu\text{F}$ ,  $C_{OUT} = 1\mu\text{F}$ ,  $V_{IN} = 5.0\text{V}$ ,  $V_{EN} = V_{IN}$ , unless otherwise noted)

Symbol	Parameter	Test Conditions	Min	Typ.	Max	Unit

### Application Note

#### Input Capacitor

A 1 $\mu$ F ceramic capacitor is recommended to connect between  $V_{IN}$  and GND pins to decouple input power supply glitch and noise. The amount of the capacitance may be increased without limit. A lower ESR (Equivalent Series Resistance) capacitor allows the use of less capacitance, while higher ESR type requires more capacitance. This input capacitor must be located as close as possible to the device to assure input stability and less noise. For PCB layout, a wide copper trace is required for both  $V_{IN}$  and GND.

#### Suggested Input Capacitance

Vendor	Capacitance	Type	Series
TAIYO YUDEN	1 $\mu$ F	Ceramic	LMK212B

#### Output Capacitor

The output capacitor is required to stabilize and help the transient response of the LDO. The AP7215 is designed to have excellent transient response for most applications with a small amount of output capacitance. The AP7215 is stable with any small ceramic output capacitors of 1.0 $\mu$ F or higher value, and the temperature coefficients of X7R or X5R type. Additional capacitance helps to reduce undershoot and overshoot during transient. For PCB layout, the output capacitor must be placed as close as possible to  $VR_{OUT}$  and GND pins, and keep the leads as short as possible.

#### Suggested Output Capacitance

Vendor	Capacitance	Type	Series
TAIYO YUDEN	1 $\mu$ F	Ceramic	LMK212B

#### Suggested Resistance

Vendor	Capacitance	Type
YAGEO	SMD	FR-SK

#### Region of Stable $C_{OUT}$ ESR vs. Load Current

#### ENABLE/SHUTDOWN Operation

The AP7215 is turned on by setting the EN pin high, and is turned off by pulling it low. If this feature is not used, the EN pin should be tied to  $V_{IN}$  pin to keep the regulator output on at all time. To ensure proper operation, the signal source used to drive the EN pin must be able to swing above and below the specified turn-on/off voltage thresholds listed in the Electrical Characteristics section under  $V_{EH}$  and  $V_{EL}$ .

	$VR_{OUT}$	$VD_{OUT}$
EN=0	0V	$\phi$
EN=1	3.3V	$\phi$

#### Current Limit Protection

When output current at  $VR_{OUT}$  pin is higher than current limit threshold, the current limit protection will be triggered and clamp the output current to approximately 750mA to prevent over-current and protect the regulator from damage due to overheating.

#### Short circuit protection

When  $VR_{OUT}$  pin is shorted to GND or  $VR_{OUT}$  voltage is less than 200mV, short circuit protection will be triggered and clamp the output current to approximately 50mA.

#### $VD_{OUT}$ (reset output)

---Open-Drain Active-Low reset output---

In general,  $VD_{OUT}$  is pulled up by a resistor (100K $\Omega$ ) to  $V_{IN}$ . The AP7215 microprocessor ( $\mu$ P) supervisory circuitry asserts a guaranteed logic-low reset during power-up and power-down. Reset is asserted when  $V_{IN}$  is below the reset threshold and remain asserted for at least  $t_{RP}$  after  $V_{IN}$  rises above the reset threshold.

As long as  $V_{IN}$  is lower than the reset threshold,  $VD_{OUT}$  remains at logic "0". When  $V_{IN}$  becomes higher than  $V_{HYS}$ , a logic "1" is asserted after a 20ms time delay defined by  $t_{RP}$ .
