

AN1311, AN1311S

Single High-Speed Comparators

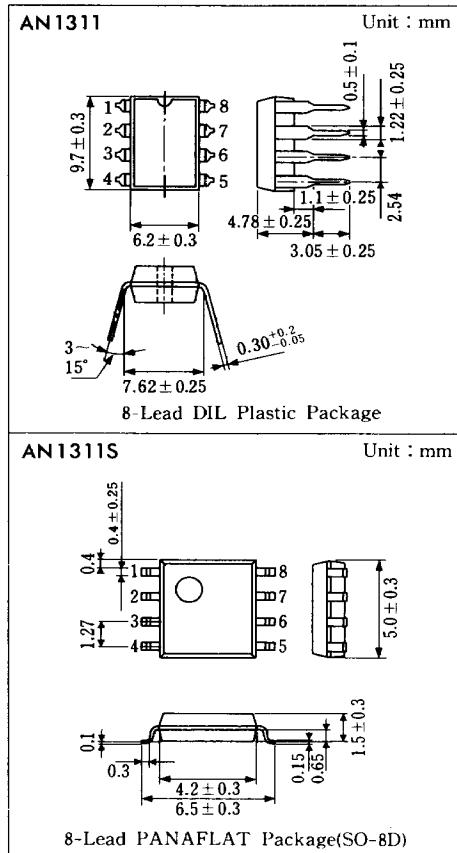

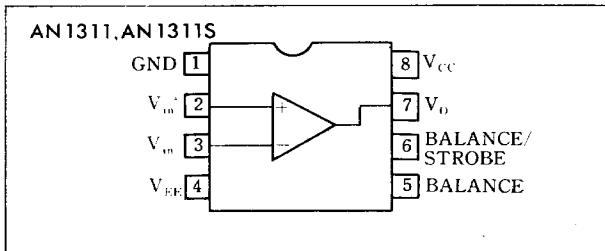

■ Outline

The AN1311 and the AN1311S are single high-speed voltage comparators with large output sink current, wide operating supply voltage range, and excellent characteristics for $\pm 15V$ operation as well as for 5V single power supply operation. They are provided with strobe pins and input balance pins and can be applied widely to drive the standard logic circuit directly.

■ Features

- The output levels are compatible with TTL and MOS logic.
- Offset balancing and strobe capability are available.
- Large output sink current drives LED and lamps.
- Output stage forms open collector and emitter follower.
