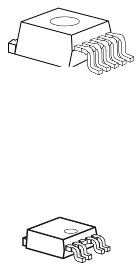
Low Drop Voltage Regulator TLE 4276-2

Features

- 5 V or variable output voltage
- Output voltage tolerance ≤ ±2%
- 400 mA current capability
- Low-drop voltage
- Inhibit input
- Very low current consumption
- Short-circuit-proof
- Reverse polarity proof
- Suitable for use in automotive electronics
- Green Product (RoHS compliant)
- AEC Qualified



Type	Package	Marking
TLE 4276-2 GV50	PG-TO263-5	4276-2V5
TLE 4276-2 GV	PG-TO263-5	4276-2V
TLE 4276-2 DV50	PG-TO252-5	4276-2V5
TLE 4276-2 DV	PG-TO252-5	4276-2V

Functional Description

The TLE 4276-2 is a low-drop voltage regulator in a TO package. The IC regulates an input voltage up to 40 V to $V_{Q,nom}$ = 5.0 V (V50) or adjustable voltage (V). The maximum output current is 400 mA. The IC can be switched off via the inhibit input, which causes the current consumption to drop below 10 µA. The IC is short-circuit-proof and includes temperature protection which turns off the device at overtemperature.

Dimensioning Information on External Components

The input capacitor C_I is necessary for compensation of line influences. Using a resistor of approx. 1 Ω in series with C_I, the oscillating of input inductivity and input capacitance can be damped. The output capacitor C_Q is necessary for the stability of the regulation circuit. Stability is guaranteed at values $C_Q \geq 22$ µF and an ESR of ≤ 3 Ω within the operating temperature range.

Circuit Description

The control amplifier compares a reference voltage to a voltage that is proportional to the output voltage and drives the base of the series transistor via a buffer. Saturation control as a function of the load current prevents any oversaturation of the power element. The IC also incorporates a number of internal circuits for protection against:

- Overload
- Overtemperature
- Reverse polarity

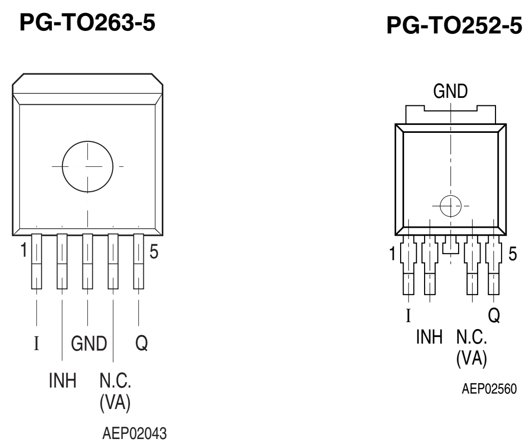


Figure 1 **Pin Configuration** (top view)

Table 1 **Pin Definitions and Functions**

Pin No.	Symbol	Function
1	I	**Input;** block to ground directly at the IC with a ceramic capacitor.
2	INH	**Inhibit;** low-active input.
3	GND	**Ground**
4	N.C. VA	**Not connected** for V50 **Voltage Adjust Input;** only for adjustable version. Connect an external voltage divider to determine the output voltage.
5	Q	**Output;** block to GND with a ≥ 22 µF capacitor, ESR ≤ 3 Ω at 10 kHz
Heat Tab		Connect to GND.

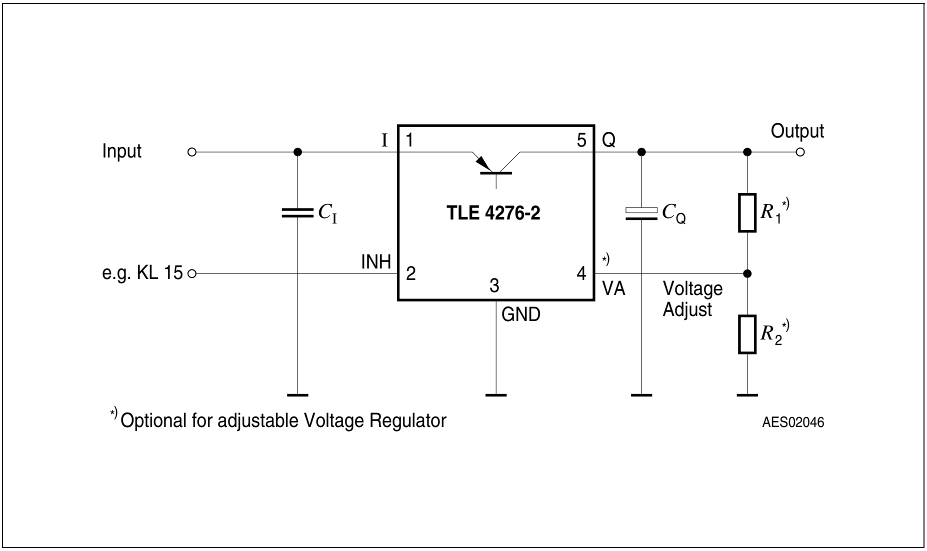

Figure 4 Application Circuit

Application Information for Variable Output Regulator TLE 4276-2 DV, GV

The output voltage of the TLE 4276-2 DV, GV can be adjusted between 2.5 V and 20 V by an external output voltage divider, closing the control loop to the voltage adjust pin VA.

The voltage at pin VA is compared to the internal reference of typical 2.5 V in an error amplifier. It controls the output voltage.

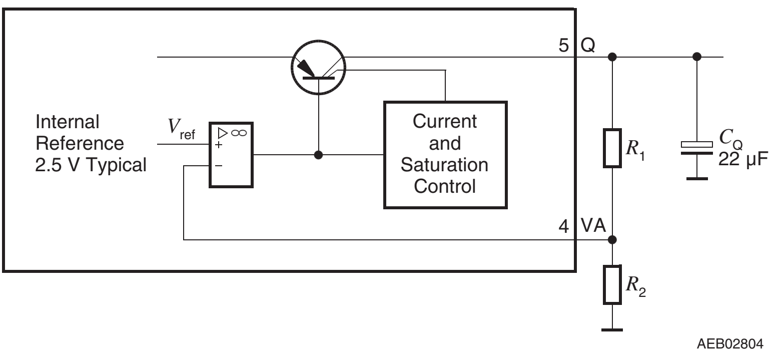

Figure 5 Application Detail External Components at Output for Variable Voltage Regulator

The output voltage is calculated according to **Equation (1)**:

$$V_Q = (R_1 + R_2)/R_2 \times V_{ref}, \text{ neglecting } I_{VA} \quad (1)$$

V_{ref} is typically 2.5 V.

To avoid errors caused by leakage current I_{VA}, we recommend to choose the resistor value R_2 according to **Equation (2)**:

$$R_2 < 50\ \text{k}\Omega \quad (2)$$

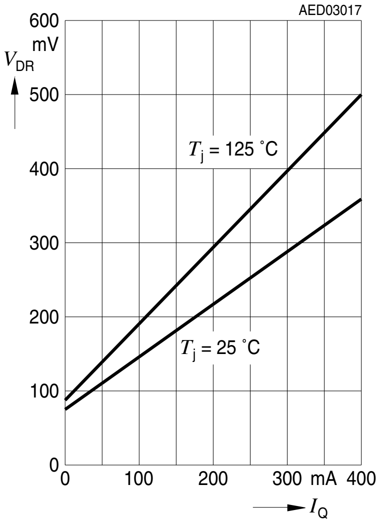
For a 2.5 V output voltage the output pin Q is directly connected to the adjust pin VA.

The accuracy of the resistors R_1 and R_2 add an additional error to the output voltage tolerance.

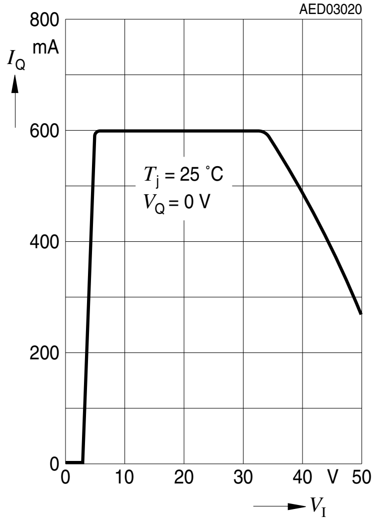
The operation range of the variable TLE 4276-2 DV, GV is V_Q + 0.5 V to 40 V. For internal biasing a minimum input voltage of 4.3 V is required. For output voltages below 4 V the voltage drop is 4.3 V - V_Q

Typical Performance Characteristics V50:

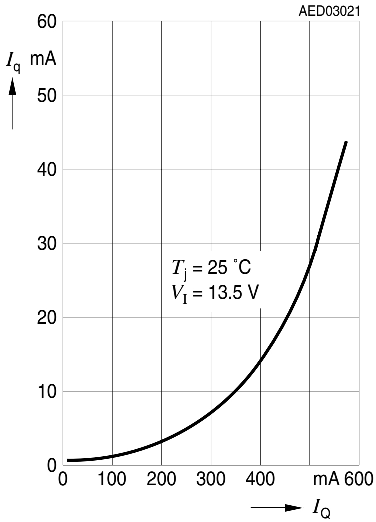
Voltage V_{DR} versus Output Current I_Q



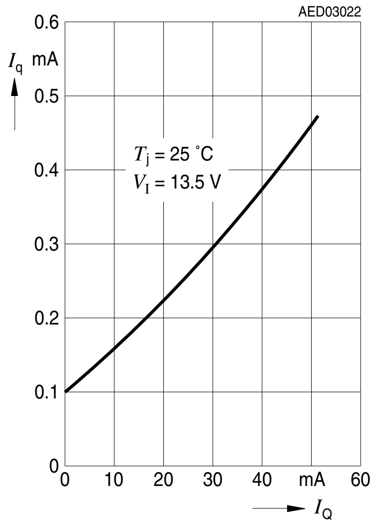
Max. Output Current I_Q versus Input Voltage V_I



Current Consumption I_q versus Output Current I_Q (high load)

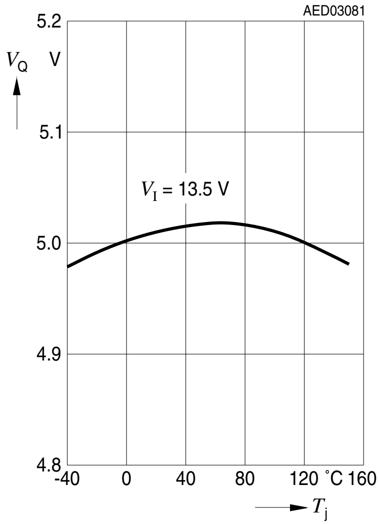


Current Consumption I_q versus Output Current I_Q (low load)

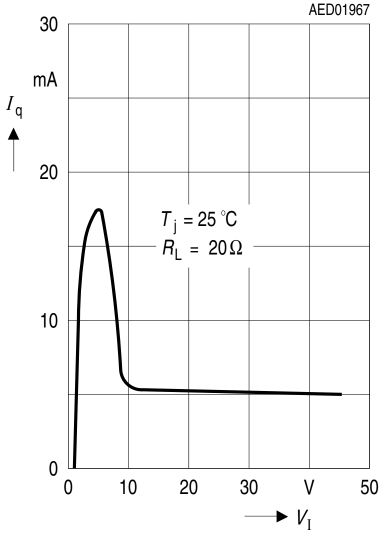


Typical Performance Characteristics for V50:

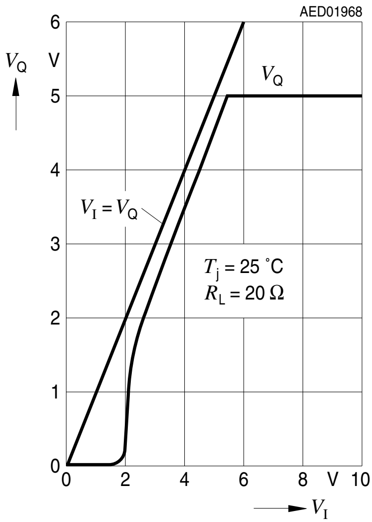
Output Voltage V_Q versus Temperature T_j



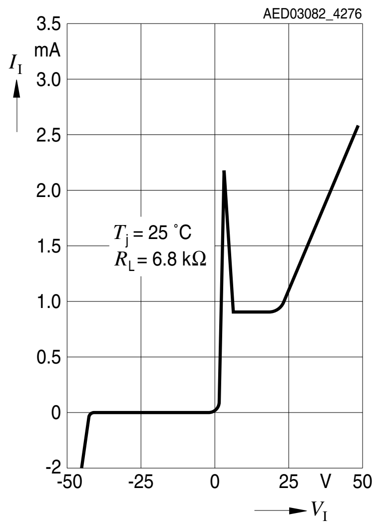
Current Consumption I_q versus Input Voltage V_I



Low Voltage Behavior



High Voltage Behavior



Package Outlines

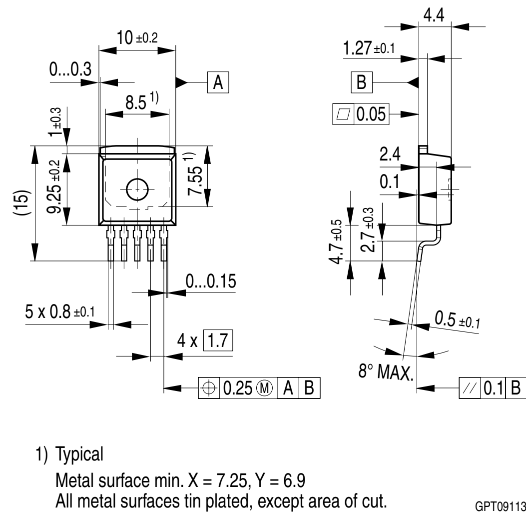


Figure 6 **PG-TO263-5** (Plastic Green Transistor Single Outline)

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).

You can find all of our packages, sorts of packing and others in our Infineon Internet Page “Products”: **http://www.infineon.com/products**.
