

BUS-CONTROLLED VIDEO MATRIX SWITCH

- 15MHz BANDWIDTH
- CASCADABLE WITH ANOTHER TEA6415B (INTERNAL ADDRESS CAN BE CHANGED BY PIN 7 VOLTAGE)
- 8 INPUTS (CVBS, RGB, MAC, CHROMA...)
- 6 OUTPUTS
- POSSIBILITY OF MAC OR CHROMA SIGNAL FOR EACH INPUT BY SWITCHING-OFF THE CLAMP WITH AN EXTERNAL RESISTOR BRIDGE
- BUS CONTROLLED
- 6.5dB GAIN BETWEEN ANY INPUT AND OUTPUT
- - 50dB CROSSTALK AT 5 MHz
- FULLY ESD PROTECTED

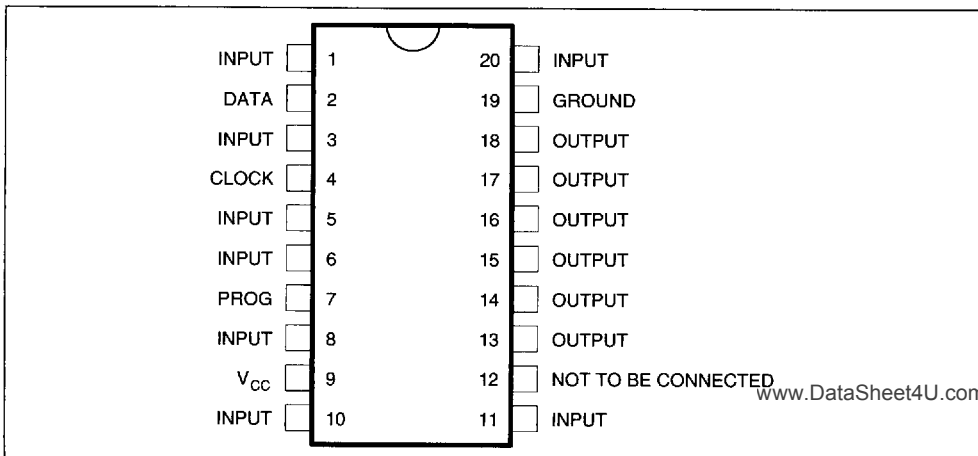

DESCRIPTION

The main function of the TEA6415B is to switch 8 video input sources on the 6 outputs.

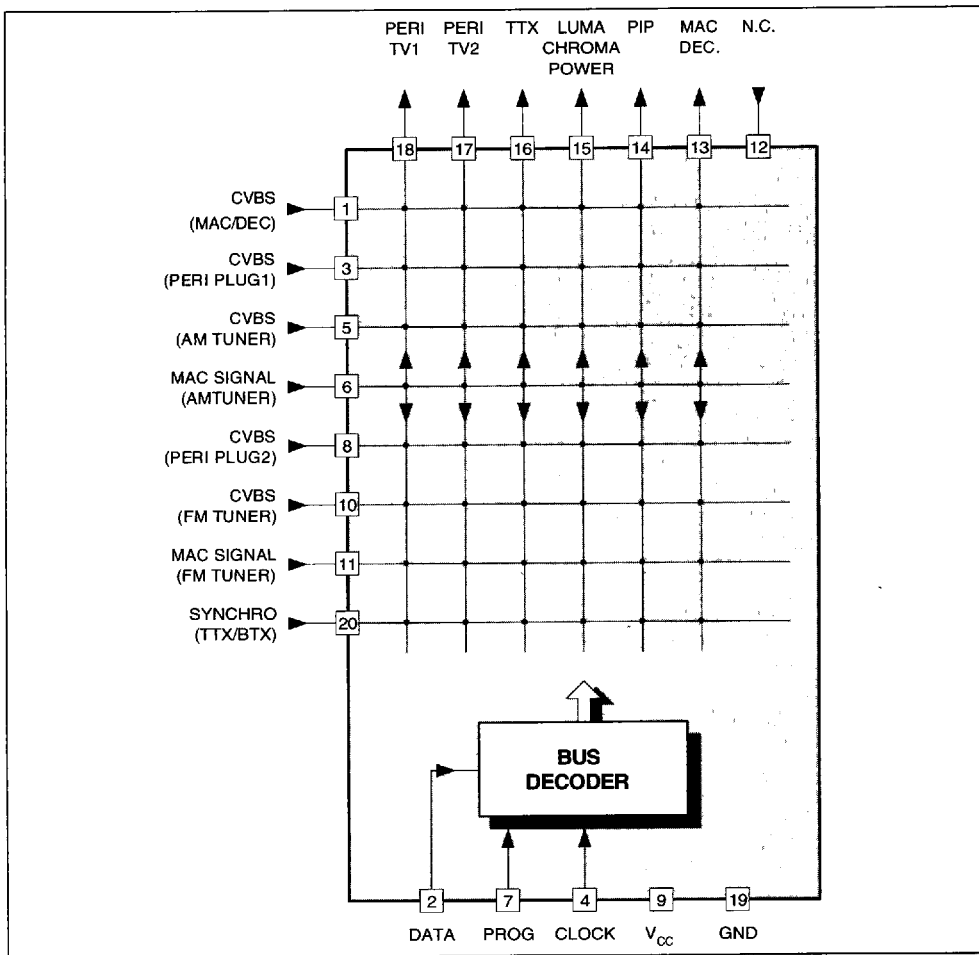

Each output can be switched to only one of the inputs whereas but any same input may be connected to several outputs.

PIN CONNECTIONS

GENERAL DESCRIPTION

The main function of the IC is to switch 8 video input sources on 6 outputs.

Each output can be switched on only one of each input. On each input an alignment of the lowest level of the signal is made (bottom of synch. top for CVBS or black level for RGB signals).

Each nominal gain between any input and output is 6.5dB. For D2MAC or Chroma signal the alignment is switched off by forcing, with an external resistor bridge, 5 V_{DC} on the input. Each input can be used as a normal input or as a MAC or Chroma

input (with external resistor bridge). All the switching possibilities are changed through the BUS.

Driving 75Ω load needs an external transistor.

It is possible to have the same input connected to several outputs.

The starting configuration upon power on (power supply : 0 to 10V) is undetermined.

In this case, 6 words of 16 bits are necessary to determine one configuration. In other case, 1 word of 16 bits is necessary to determine one configuration.

BUS SELECTIONS (I²C-BUS)

2nd byte of transmission

ADDRESS MSB	DATA LSB	Selected Output	
00000	XXX	Pin 18	Output is selected by address bits
00100	XXX	Pin 14	
00010	XXX	Pin 16	
00110	---	Not used	
00001	XXX	Pin 17	
00101	XXX	Pin 13	
00011	XXX	Pin 15	
00111	---	Not used	
		Selected Input	
00XXX	000	Pin 5	Input is selected by data bits
00XXX	100	Pin 8	
00XXX	010	Pin 3	
00XXX	110	Pin 20	
00XXX	001	Pin 6	
00XXX	101	Pin 10	
00XXX	011	Pin 1	
00XXX	111	Pin 11	

Example :00100 101 connects pin 10 (input) to pin 14 (output) (equals 25 in hexadecimal)
 Address byte (1st byte of transmission)

86	1000	0110
06	0000	0110

USE WITH AN OTHER TEA6415B

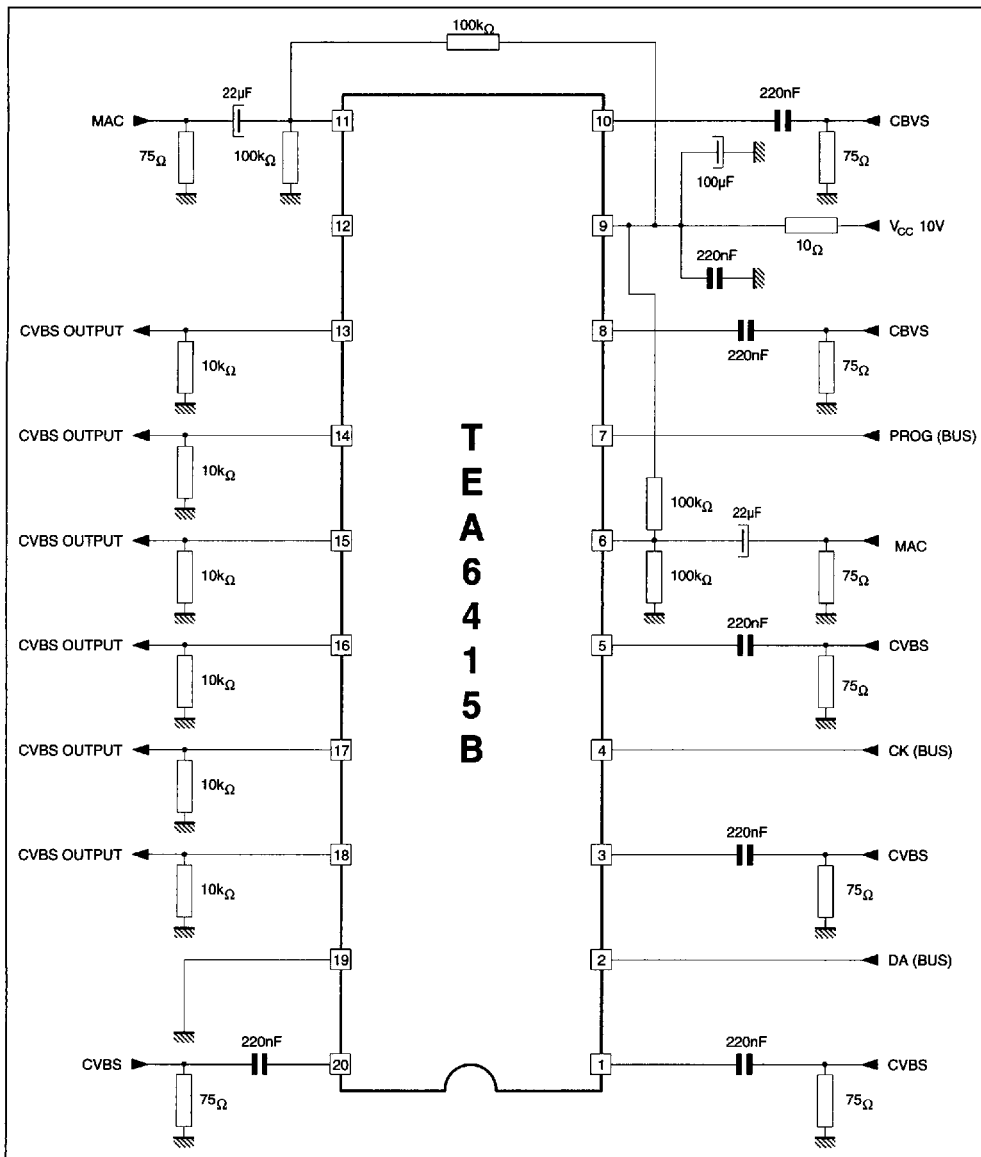

The programming input (PROG) permits to operate with two TEA6415B in parallel and to select them independently through the I²C-BUS without

modifying the address byte. Consequently, the switch capabilities are doubled or IC1 and IC2 can be cascaded.

Figure 5

TYPICAL APPLICATION

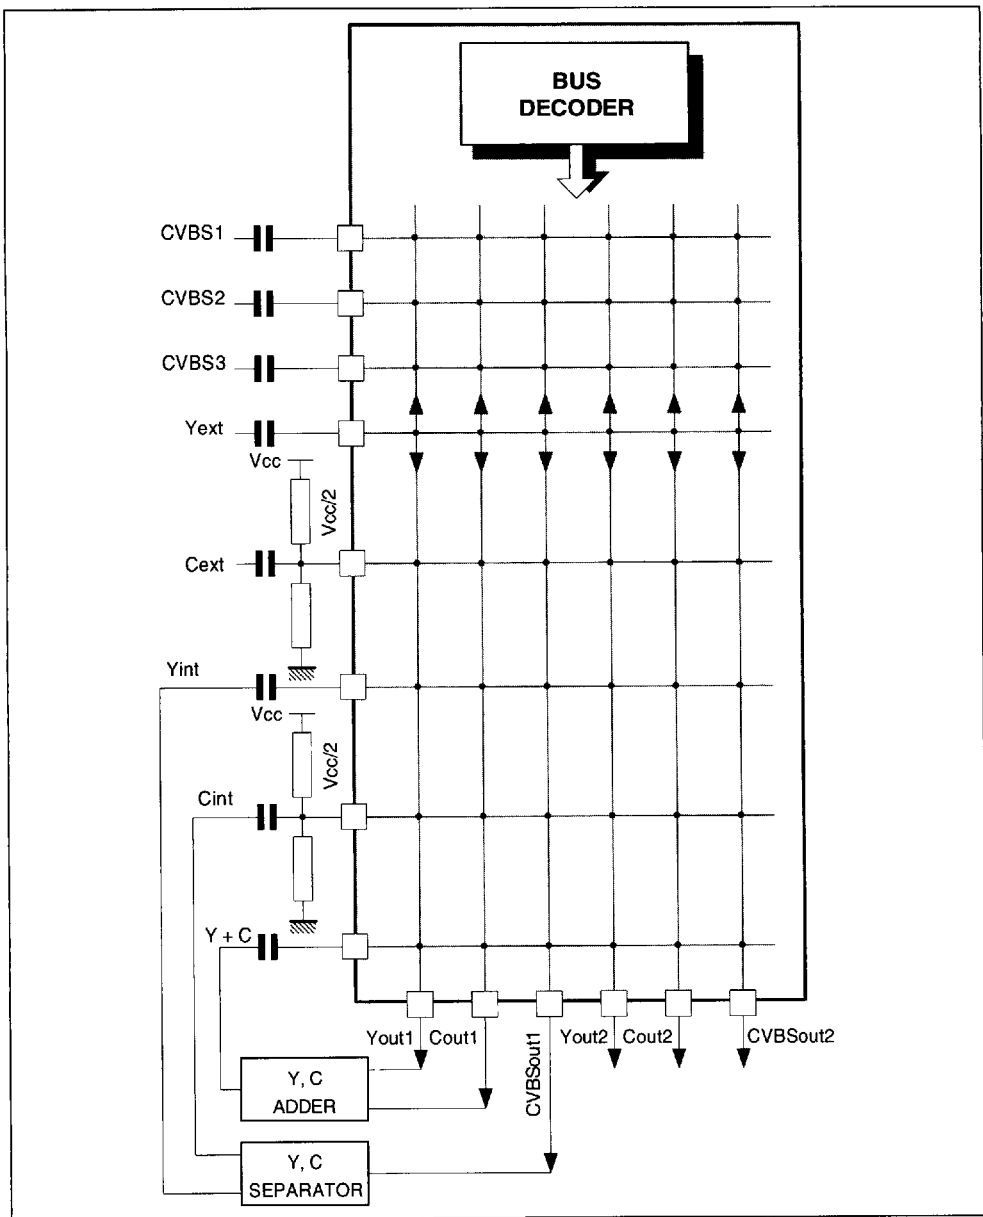

6415B-08 EPS

CROSSTALK IMPROVEMENT

1 - When any input is not used, it must be bypassed to ground through a 220nF capacitor.

2 - An important improvement can be achieved considering the input crosstalk by means of the application (see technical note).
