

### Features

- Single power supply: 2.4V~4.5V
- Low standby current: 1 $\mu$ A (Typ.) at V<sub>DD</sub>=3V
- Auto power-off function
- Six different sound sections
- K1 to K6 independently chosen or as a cascade control
- Speaker or direct piezo application
- 0.5Hz~1Hz LED flash output
- Minimal external components

### General Description

The HT2860 is a CMOS LSI chip designed for use in sound effect products. It can generate six sections of programmable sounds. The LSI is equipped with tone circuit and control logic to generate various sounds including door bell, alarm, melodies, etc. Users can play not only sound sections (S1~S6) by triggering a single key (K1~K6), but serial sound sections by si-

multaneously triggering more than one key according to the key priority where K1 is the highest and K6 is the lowest. The customer's sound sample is analyzed and programmed into an internal ROM by changing a mask layer during device fabrication. The HT2860 is suitable for various toy applications.

7	KEY3	I	Pull-Low	KEY3 input, high active
8	KEY2	I	Pull-Low	KEY2 input, high active
9	KEY1	I	Pull-Low	KEY1 input, high active
10	VSS	—	—	Negative power supply, GND
11	PWR	I	—	Power on reset
12	TEST2	I/O	—	For IC test only
13	TEST1	I/O	—	For IC test only
14	OUT	O	Inverter Out	Sound output, normally low at the standby state
15	$\overline{\text{OUT}}$	O	Inverter Out	Sound output, out of phase to pad 14
16	OSC2	O	—	Oscillator output
17	OSC1	I	—	Oscillator input
18	TEST3	I/O	—	For IC test only

**Absolute Maximum Ratings\***

Supply Voltage ..... -0.3V to 5V      Storage Temperature ..... -50°C to 125°C

Input Voltage .....  $V_{SS}-0.3$  to  $V_{DD}+0.3V$       Operating Temperature ..... 0°C to 70°C

\*Note: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only. Functional operation of this device at these or any other conditions above those indicated in the operational sections of this specification is not implied and exposure to absolute maximum rating conditions for extended periods may affect device reliability.
