

## Smart Lowside Power Switch

### Features

- Logic Level Input
- Input protection (ESD)
- Thermal shutdown (with restart)
- Overload protection
- Short circuit protection
- Overvoltage protection
- Current limitation

### Product Summary

Continuous drain source voltage	$V_{DS}$	55	V
On-state resistance	$R_{DS(ON)}$	550	m $\Omega$
Current limitation	$I_{D(lim)}$	1	A
Load current (ISO)	$I_{D(ISO)}$	0.7	A
Clamping energy	$E_{AS}$	550	mJ

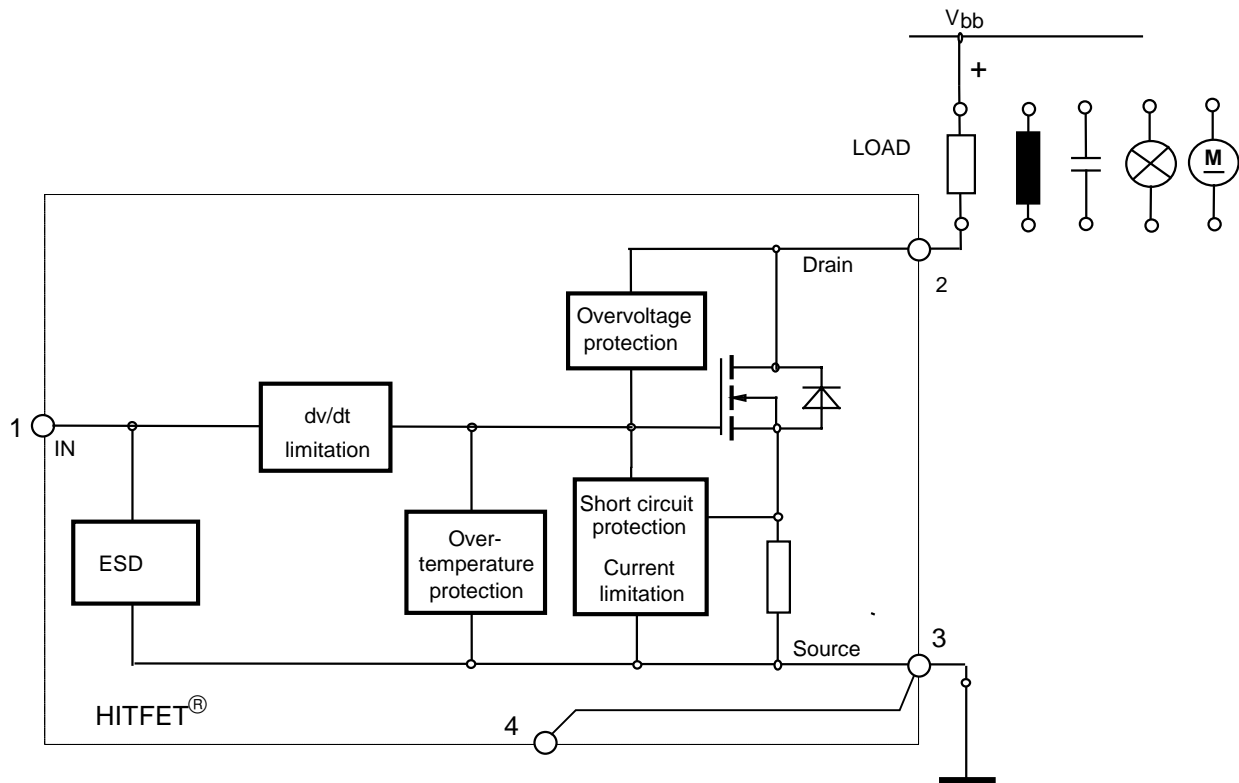

### Application

- All kinds of resistive, inductive and capacitive loads in switching applications
- $\mu$ C compatible power switch for 12 V and 24 V DC applications
- Replaces electromechanical relays and discrete circuits

### General Description

N channel vertical power FET in **Smart Power Technology**. Fully protected by embedded protection functions.

## Circuit Description

The BSP 75 is a monolithic power switch in Smart Power Technology (SPT) with a logic level input, an open drain DMOS output stage and integrated protection functions. It is designed for all kind of resistive and inductive loads (relays, solenoid) in automotive and industrial applications.

### Protection functions

- **Overvoltage protection:** An internal clamp limits the output voltage at  $V_{DS(AZ)}$  (about 63 V) when inductive loads are switched off.
- **Current limitation:** By means of an internal current measurement the drain current is limited at  $I_{D(lim)}$  (1.4 - 1.5 A typ.). If the current limitation is active the device operates in the linear region, so power dissipation may exceed the capability of the heatsink. This operation leads to an increasing junction temperature until the overtemperature threshold is reached.
- **Overtemperature and short circuit protection:** This protection is based on sensing the chip temperature. The location of the sensor ensures a fast and accurate junction temperature detection. Overtemperature shutdown occurs at minimum 150 °C. A hysteresis of typ. 10 K enables an automatical restart by cooling.

The device is ESD protected according Human Body Model (4 kV) and load dump protected (see Maximum Ratings).

## Block diagram

### Terms

### Input circuit (ESD protection)

ESD zener diodes are not designed for DC current.

## Inductive and overvoltage output clamp

## Turn on into overload or short circuit

Shut down by overtemperature and restart by cooling. Current internally limited at  $I_{D(lim)}$ .

### Maximum allowable power dissipation

$$P_{tot} = f(T_C)$$

### On-state resistance

$$R_{ON} = f(T_j); I_D = 0.7 \text{ A}; V_{IN} = 10 \text{ V}$$

### On-state resistance

$$R_{ON} = f(T_j); I_D = 0.7 \text{ A}; V_{IN} = 5 \text{ V}$$

### Typ. input threshold voltage

$$V_{IN(th)} = f(T_j); I_D = 10 \text{ mA}; V_{DS} = 12 \text{ V}$$

**Typ. on-state resistance**  
 $R_{ON} = f(V_{IN})$   $I_D = 0.7\text{ A}$ ;  $T_j = 25^\circ\text{C}$

**Typ. short circuit current**  
 $I_{D(SC)} = f(V_{IN})$ ;  $V_{DS} = 12\text{V}$ ,  $T_j = 25^\circ\text{C}$

**Typ. current limitation**  
 $I_{D(lim)} = f(T_j)$ ;  $V_{DS} = 12\text{V}$ ,  $V_{IN} = 10\text{V}$

**Transient thermal impedance**

$Z_{thJC} = f(t_p)$   
 Parameter:  $D = t_p / T$   
 $Z_{thJC}$  [K/W]

Application examples:

Status signal of thermal shutdown by monitoring input current

As far as patents or other rights of third parties are concerned, liability is only assumed for components. The information describes a type of component and shall not be considered as warranted characteristics. Terms of delivery and rights to change design reserved. For questions on technology, delivery and prices please contact the Semiconductor Group Offices in Germany or the Siemens Companies and Representatives worldwide (see address list). Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Siemens Office, Semiconductor Group. Siemens AG is an approved CECC manufacturer.

### Packing

Please use the recycling operators known to you. We can also help you - get in touch with your nearest sales office. By agreement we will take packing material back, if it is sorted. You must bear the costs of transport.

For packing material that is returned to us unsorted or which we are not obliged to accept, we shall have to invoice you for any costs incurred.

### Components used in life-support devices or systems must be expressly authorized for such purpose!

Critical components<sup>1</sup> of the Semiconductor Group of Siemens AG, may only be used in life-support devices or systems<sup>2</sup> with the express written approval of the Semiconductor Group of Siemens AG.

1) A critical component is a component used in a life-support device or system whose failure can reasonably be expected to cause the failure of that life-support device or system, or to affect its safety or effectiveness of that device or system.

2) Life support devices or systems are intended (a) to be implanted in the human body, or (b) to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.
