

8-bit Proprietary Microcontroller

CMOS

F²MC-8L MB89560H Series

MB89567H/567HC/P568/PV560

■ DESCRIPTION

The MB89560H series has been developed as a general-purpose version of the F²MC*-8L family consisting of proprietary 8-bit, single-chip microcontrollers.

In addition to a compact instruction set, the microcontroller contains a variety of peripheral functions such as I²C interface, timers, 2 ch PWM timers, 8/16-bit timer, 21bit timebase timer, 8 bit PWC timer, 17-bit Watch prescaler, Watch-dog timer, High speed UART, 8-bit SIO, UART/SIO, LCD controller/driver (optional booster), Two type Programmable Pulse Generators (PPG), an A/D converter, and external interrupt.

*: F²MC stands for FUJITSU Flexible Microcontroller.

■ FEATURES

- F²MC-8L family CPU core
- Low-voltage operation (when an A/D converter is not used)
- Low current consumption (applicable to the dual-clock system)
- Minimum execution time: 0.32 μs at 12.5 MHz
- I²C interface circuit
- LCD controller/driver : 24 segments x 4 commons (max. 96 pixels, duty LCD mode and Static LCD mode)
- LCD booster function (option)
- Wild register (max. 6 different address locations)
- 10-bit A/D converter: 8 channels

(Continued)

■ PACKAGE

80-pin Plastic LQFP

FPT-80P-M05

80-pin Plastic QFP

FPT-80P-M06

80-pin Plastic LQFP

FPT-80P-M11

80-pin Ceramic MQFP

MQP-80C-P01

MB89560H Series

(Continued)

- Three types of Serial Interface:
 - High Speed UART (Transfer rate from 300 to 192000 bps /10 MHz main clock)
 - 8-bit Serial I/O (SIO)
 - UART/SIO
- Two type of Programmable Pulse Generator(PPG) : 6-bit PPG and 12-bit PPG
- Six types of timer
 - 8 bit PWM 2 channels timers
 - 8/16 bit timer/counter (8 bits x 2 channels or 16 bits x 1 channel)
 - 21bit timebase timer
 - 8 bit PWC timer operation
 - Watch prescaler(17 bits)
 - Watch-dog timer
- I/O ports: max. 50 channels
- External interrupt 1: 8 channels
- External interrupt 2 (wake-up function): 4 channels
- Low-power consumption modes (stop mode, sleep mode, and watch mode)
- LQFP-80 and QFP-80 package
- CMOS technology

■ PRODUCT LINEUP

Part number Parameter	MB89567H	MB89567HC	MB89P568	MB89PV560
Classification	Mass production products (mask ROM products)		OTP	Piggy-back
ROM size	32 K × 8 bits (internal mask ROM)		48 K × 8 bits (internal PROM)	56 K × 8 bits (external ROM)
RAM size	1K × 8 bits			1K × 8 bits
CPU functions	Number of instructions: : 136 Instruction bit length: : 8 bits Instruction length: : 1 to 3 bytes Data bit length: : 1, 8, 16 bits Minimum execution time: : 0.4 μs/10 MHz Minimum interrupt processing time: : 3.6 μs/10 MHz			
Ports	General-purpose I/O ports (N-channel open drain) : 20 pins (2 shared with I ² C inputs, 16 shared with LCD, 2 shared with other resources) General-purpose I/O ports (CMOS) : 30 pins (shared with resources) Total : 50 pins			
21-bit timebase timer	21 bits Interrupt cycle: 2 ¹¹ , 2 ¹³ , 2 ¹⁶ or 2 ²⁰ t _{inst} *5			
Watchdog timer	Reset generate cycle: min. 2 ²⁰ t _{inst} for main clock, min. 2 ¹³ t _{inst} for sub clock			
Watch prescaler	17 bits Interrupt cycle: 0.50s, 1.00s, 2.00s, 4.00s/32.768 KHz for subclock			
8/16-bit timer/counter	Can be operated either as a 2-channel 8-bit timer/counter (Timer 1 and Timer 2, each with its own independent operating clock cycle), or as one 16-bit timer/counter In Timer 1 or 16-bit timer/counter operation, event counter operation (external clock-triggered) and square wave output capable			
8-bit PWM 2 ch timer	8-bit interval timer operation (square wave output capable, operating clock cycle: 1, 8, 16, 64 t _{inst}) 8-bit resolution PWM operation (conversion cycle: 256 to 256 x 64 t _{inst}) 8/16-bit timer/counter output for counter clock selectability			

MB89560H Series

Part number Parameter	MB89567H	MB89567HC	MB89P568	MB89PV560
PWC timer	8-bit timer operation (count clock cycle: 1, 4, 32 t_{inst}) 8-bit reload timer operation (toggle output possible, operating clock cycle: 1 - 32 t_{inst}) 8-bit pulse width measurement (continuous measurement possible: High and Low widths, H to H, L to L, period & H at same time and High & rising to rising)			
10-bit A/D converter*2	10-bit resolution × 8 channels A/D conversion function (conversion time: 60 t_{inst}) Continuous activation by an 8/16-bit timer/counter output or a timebase timer output capable.			
6 bit PPG	Internal 6-bit counter Pulse width and cycle are program selectable			
12 bit PPG	Internal 12-bit counter Pulse width and cycle are program selectable			
I ² C interface*4	Not Available	1 channel Use a 2-wire protocol to communicate with other device		
High speed UART	Transfer data length: 4, 6, 7, 8 bits Transfer rate (300 to 192000 bps /10 MHz main clock) support sub-clock mode			
UART/SIO	Transfer data length: 7, 8 bits for UART, 8 bits for SIO Transfer rate (1201 to 78125 bps / 10 MHz main clock) support sub-clock mode			
8-bit serial I/O	8 bits, LSB first/MSB first selectability One clock selectable from four transfer clocks (one external shift clock, three internal shift clocks: 2, 8, 32 t_{inst})			
LCD	Common output: 4 (max.) Segment output: 24 (max.) LCD driving power (bias) pins: 4 LCD display RAM size: 12 bytes (24 × 4 bits, max. 96 pixels) Duty LCD mode and Static LCD mode Booster for LCD driving: option Dividing resistor for LCD driving: Built-in*1			
Wild register	Maximum of 6-byte data can be assigned in 6 different address. Used to replace any data in the ROM when specific address and data are assigned in Wild register. Wild register can be set up by using different communication methods through the device.			
External interrupt 1 (wake-up function)	8 independent channels (interrupt vector, request flag, request output enable) Edge selectability (rising/falling) Used also for wake-up from stop/sleep mode. (edge detection is also permitted in stop mode.)			
External interrupt 2 (wake-up function)	4 channels ("L" level interrupts, independent input enable). Used also for wake-up from stop/sleep mode. (Low-level detection is also permitted in stop mode.)			
Standby mode	Sleep mode, stop mode and clock mode			
Process	CMOS			
Operating voltage*	3.5 V to 5.5 V	3.5 V to 5.5 V	2.7 to 5.5 V	2.7 to 5.5 V*3

* :Varies with conditions such as the operating frequency. (See "■ Electrical Characteristics.")

*1 : When booster is used, the bias is reduced by 1/3. it can be selected by mask option.

*2 : When the A/D converter is used, operating voltage must be 3.5V to 5.5V.

*3 : Use MBM27C512-20 as the external ROM (operating voltage: 4.5 V to 5.5 V)

*4 : I²C is complied to Intel Corp. System Management Bus Rev. 1.0 specification and to the Philips I²C specification.

*5 : 1 t_{inst} = one instruction cycle (execution time) which can be selected as 1/4, 1/8, 1/16, or 1/64 of main clock if main clock mode is selected , or 1/2 of the subclock if subclock mode is selected

MB89560H Series

■ PACKAGE AND CORRESPONDING PRODUCTS

Package	MB89567H MB89567HC	MB89P568-101 MB89P568-102	MB89PV560-101 MB89PV560-102
FPT-80P-M05	○	○	×
FPT-80P-M06	○	○	×
FPT-80P-M11	○	○	×
MQP-80C-P01	×	×	○

■ DIFFERENCES AMONG PRODUCTS

1. Memory Size

Before evaluating using the OTPROM (one-time PROM) products, verify its differences from the product that will actually be used. Take particular care on the following points:

- The stack area, etc., is set at the upper limit of the RAM.

2. Current Consumption

- For the MB89PV560, add the current consumed by the EPROM mounted in the piggy-back socket.
- When operating at low speed, the current consumed by the one-time PROM product is greater than for the mask ROM product. However, the current consumption is roughly the same in sleep or stop mode.
- (For more information, see “■ Electrical Characteristics.”)

3. Mask Options

The functions available as options and the method of specifying options differ between products.

Before using options check “■ Mask Options.”

4. Functionalities different between products in MB89560H series

Functionalities	MB89567H	MB89567HC	MB89P568	MB89PV560
Power-on reset wait time	Regulator stab. time + Regulator recovery. time + Osc. stab. time		Regulator stab. time + Osc. stab. time	Osc. stab. time
Wait time for external reset in stop/sub/clock mode or wait time for external interrupt trigger recover from main stop mode	Regulator recovery time + Osc. stab. time		Osc. stab. time	
Port pin pullup resistors	Selectable by software.			Not available.
AD conversion time	60 t _{INST} *			33 t _{INST} *
I ² C noise cancelling circuit	—	Always available independent of ICCR:DMBP bit selection.		Not available when ICCR:DMBP bit is asserted.

Note: For more information on t_{INST} see “■ Electrical Characteristics (4) Instruction cycles”

* : Instruction cycle

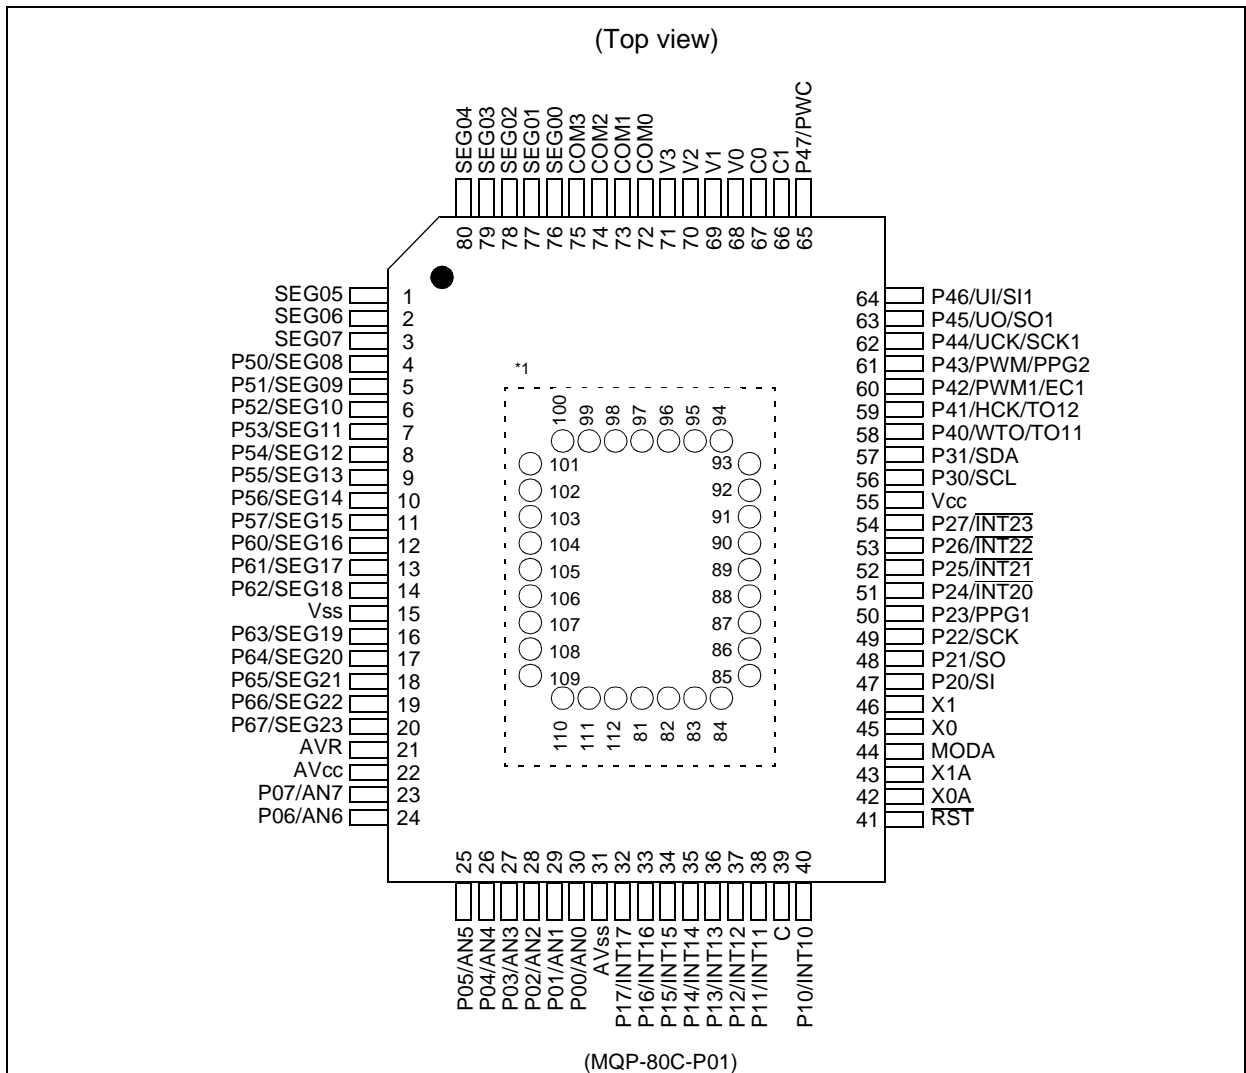

■ PIN ASSIGNMENT

■ PIN DESCRIPTION

Pin no.		Pin name	I/O circuit type	Function
LQFP*1 LQFP*2	MQFP*3 QFP*4			
43	45	X0	A	Crystal or other resonator connector pins for the main clock. The external clock can be connected to X0. When this is done, be sure to leave X1 open. CR oscillation selectability in model with a mask ROM only.
44	46	X1		
42	44	MODA	C	Memory access mode setting pins. Connect directly to VSS. Hysteresis input type.
39	41	$\overline{\text{RST}}$	D	Reset I/O pin This pin is a CMOS output type with a pull-up resistor, and a hysteresis input type. “L” is output from this pin by an internal reset request (optional). The internal circuit is initialized by the input of “L”.
49 to 52	51 to 54	P24/ $\overline{\text{INT20}}$ to P27/ $\overline{\text{INT23}}$	E	General-purpose CMOS I/O ports Also serve as an external interrupt 2 input (wake-up function). External interrupt 2 input is hysteresis input. Selectable pull-up resistor.
30 to 36 ,38	32 to 38,40	P10/ $\overline{\text{INT10}}$ to P17/ $\overline{\text{INT17}}$	E	General-purpose CMOS I/O ports Also serve as input for external interrupt 1 input. External interrupt 1 input is hysteresis input. Selectable pull-up resistor.
60	62	P44/ $\overline{\text{UCK}}$ / SCK1	E	General-purpose CMOS I/O ports Also serve as the clock I/O for the High-speed UART and Serial IO. The peripheral is a hysteresis input type. Selectable pull-up resistor.
61	63	P45/ $\overline{\text{UO}}$ / $\overline{\text{SO1}}$	F	General-purpose CMOS I/O ports Also serves as the data output for the High-speed UART and Serial I/O. The peripheral is a hysteresis input type. Selectable pull-up resistor.
62	64	P46/ $\overline{\text{UI}}$ / $\overline{\text{SI1}}$	G	N-ch open drain general-purpose I/O ports Also serves as the data input for the High-speed UART and Serial I/O. The peripheral is a hysteresis input type.
63	65	P47/ $\overline{\text{PWC}}$	G	N-ch open drain general-purpose I/O port Also serve as the external clock input for PWC. The peripheral is a hysteresis input.
56	58	P40/ $\overline{\text{WTO}}$ / TO11	F	General-purpose CMOS I/O port Also serves as an 8/16-bit timer/counter output and PWC output.

Pin no.		Pin name	I/O circuit type	Function
LQFP*1 LQFP*2	MQFP*3 QFP*4			
57	59	P41/HCK/ TO12	F	General-purpose CMOS I/O port Also serves as an 8/16-bit timer/counter output. and half of main clock output Selectable pull-up resistor.
45	47	P20/SI	E	General-purpose CMOS I/O port Also serves as the data input for the serial I/O. The peripheral is a hysteresis input type. Selectable pull-up resistor.
46	48	P21/SO	F	General-purpose CMOS I/O port Also serves as the data output for the serial I/O. Selectable pull-up resistor.
47	49	P22/SCK	E	General-purpose CMOS I/O port Also serves as the clock I/O for the serial I/O. The peripheral is a hysteresis input type. Selectable pull-up resistor.
48	50	P23/PPG1	F	General-purpose CMOS I/O port Also serves as the 6 bit programmable pulse generator. Selectable pull-up resistor.
54	56	P30/SCL	G	N-ch open-drain general-purpose I/O port Data I/O pin for I ² C interface
55	57	P31/SDA	G	N-ch open-drain general-purpose I/O port Data I/O pin for I ² C interface
65	67	C0	—	Function as capacitor connection pin in the products with a booster.
64	66	C1	—	Function as capacitor connection pin in the products with a booster.
59	61	P43/PWM2/ PPG2	F	General-purpose CMOS I/O port Also serves PWM wave output for the 8-bit PWM timer 1 and as 12 bit programmable pulse generator output. Selectable pull-up resistor.
58	60	P42/PWM1/ EC1	E	General-purpose CMOS I/O port Also serves as the PWM wave output and external clock for the 8/16 bit timer counter. Selectable pull-up resistor.
21 to 28	23 to 30	P00/AN0 to P07/AN7	J	General-purpose CMOS I/O ports Also serve as the analog input for the A/D converter. Selectable pull-up resistor.
10 to 12 14 to 18	12 to 14 16 to 20	P60/SEG16 to P67/SEG23	H/I	N-ch open-drain general-purpose output ports Also serve as an LCD controller/driver segment output.
2 to 9	4 to 11	P50/SEG8 to P57/SEG15	H/I	N-ch open-drain general-purpose output ports Also serve as an LCD controller/driver segment output.

Pin no.		Pin name	I/O circuit type	Function
LQFP*1 LQFP*2	MQFP*3 QFP*4			
74 to 80, 1	1 to 3 76 to 80	SEG0 to SEG7	I	LCD controller/driver segment output-only pins
70 to 73	72 to 75	COM0 to COM3	I	LCD controller/driver common output-only pins
68 to 71	70 to 73	V0 to V3	—	LCD driving power supply pins.
42	44	X0A	B	Crystal or other resonator connector pins for the subclock (Subclock: 32.768 kHz) The external clock can be connected to X0A. When this is done, Be sure to leave X1A open.
43	45	X1A		
55	57	Vcc	—	Power supply pin
39	41	C	—	Capacitor connection pin *5
15	17	Vss	—	Power supply (GND) pin
22	24	AVcc	—	A/D converter power supply pin
21	23	AVR	—	A/D converter reference voltage input pin
31	33	AVss	—	A/D converter power supply pin Use this pin at the same voltage as VSS.

*1: FPT-80P-M05

*2: FPT-80P-M11

*3: MQP-80C-P01

*4: FPT-80P-M06

*5: When MB89PV560-101 or MB89PV560-102 is used, this pin will become a NC pin without internal connection.

When MB89P568-101 or MB89P568-102 is used, this pin will be select a regulator stabilization delay time.

If 5V used in MB89P568-101 or MB89P568-102, this pin must be connected to Vss.

If 3V used in MB89P568-101 or MB89P568-102, this pin must be connected to Vcc.

If MB89567H or MB89567HC is used, 0.1 μ F capacitor should connect to this pin.

MB89560H Series

■ HANDLING DEVICES

1. Preventing Latchup

Latchup may occur on CMOS ICs if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- to high-voltage pins or if higher than the voltage which shows on “1. Absolute Maximum Ratings” in “■ Electrical Characteristics” is applied between V_{CC} and V_{SS} .

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog power supply (AV_{CC} and AVR) and analog input from exceeding the digital power supply (V_{CC}) when the analog system power supply is turned on and off.

2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

3. Treatment of Power Supply Pins on Microcontrollers with A/D and D/A Converters

Connect to be $AV_{CC} = DAVC = V_{CC}$ and $AV_{SS} = AVR = V_{SS}$ even if the A/D and D/A converters are not in use.

4. Treatment of N.C. Pins

Be sure to leave (internally connected) N.C. pins open.

5. Power Supply Voltage Fluctuations

Although V_{CC} power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that V_{CC} ripple fluctuations (P-P value) will be less than 10% of the standard V_{CC} value at the commercial frequency (50 to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

6. Precautions when Using an External Clock

Even when an external clock is used, oscillation stabilization time is required for power-on reset and wake-up from stop mode.

■ PROGRAMMING TO THE EPROM ON THE MB89P568

The MB89P568 is an OTPROM version of the MB89567H and MB89567HC.

1. Features

- 48-Kbyte PROM on chip
- Equivalency to the MBM271001A in EPROM mode (when programmed with the EPROM programmer)

2. Memory Space

Memory space in EPROM mode is diagrammed below.

3. Programming to the EPROM

In EPROM mode, the MB89P568 functions equivalent to the MBM27C1001A. This allows the PROM to be programmed with a general-purpose EPROM programmer (the electronic signature mode cannot be used) by using the dedicated socket adapter.

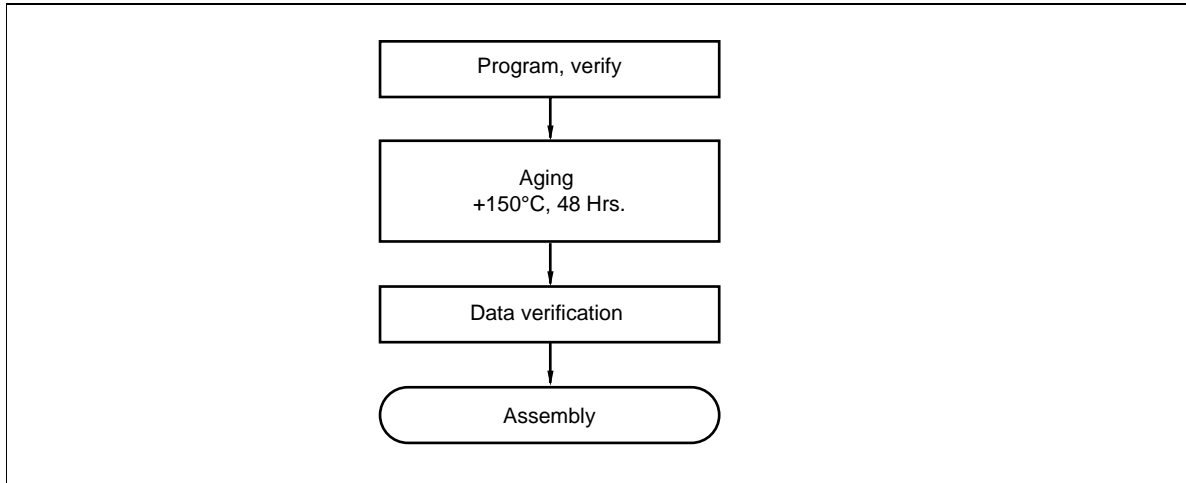

• Programming procedure

- (1) Set the EPROM programmer to the MBM27C1001A.
- (2) Load program data into the EPROM programmer at 4000H to FFFFH
- (3) Program with the EPROM programmer.

MB89560H Series

4. Recommended Screening Conditions

High-temperature aging is recommended as the pre-assembly screening procedure.

5. Programming Yield

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

6. EPROM Programmer Socket Adapter

Package	Compatible socket adapter
FPT-80P-M05	ROM-80SQF-32DP-8LA
FPT-80P-M06	ROM-80QF-32DP-8LA2
FPT-80P-M11	ROM-80SQF-32DP-8LA

Inquiry: Sun Hayato Co., Ltd.: TEL 81-3-3802-5760

■ PROGRAMMING TO THE EPROM WITH PIGGYBACK/EVALUATION DEVICE

1. EPROM for Use

MBM27C512-20TV

2. Programming Socket Adaptor

To program to the PROM using an EPROM programmer, use the socket adaptor (manufacturer: Sun Hayato Co., Ltd.) listed below.

Package	Adaptor socket part number
LCC-32 (Rectangle)	ROM-32LC-28DP-YG

Inquiry: Sun Hayato Co., Ltd.: TEL 81-3-5396-9106

3. Memory Space

4. Programming to EPROM

- (1) Set the EPROM programmer to the MBM27C512.
- (2) Load program data into the EPROM programmer at 2000H to FFFFH.
- (3) Program to 2000H to FFFFH with the EPROM programmer.

MB89560H Series

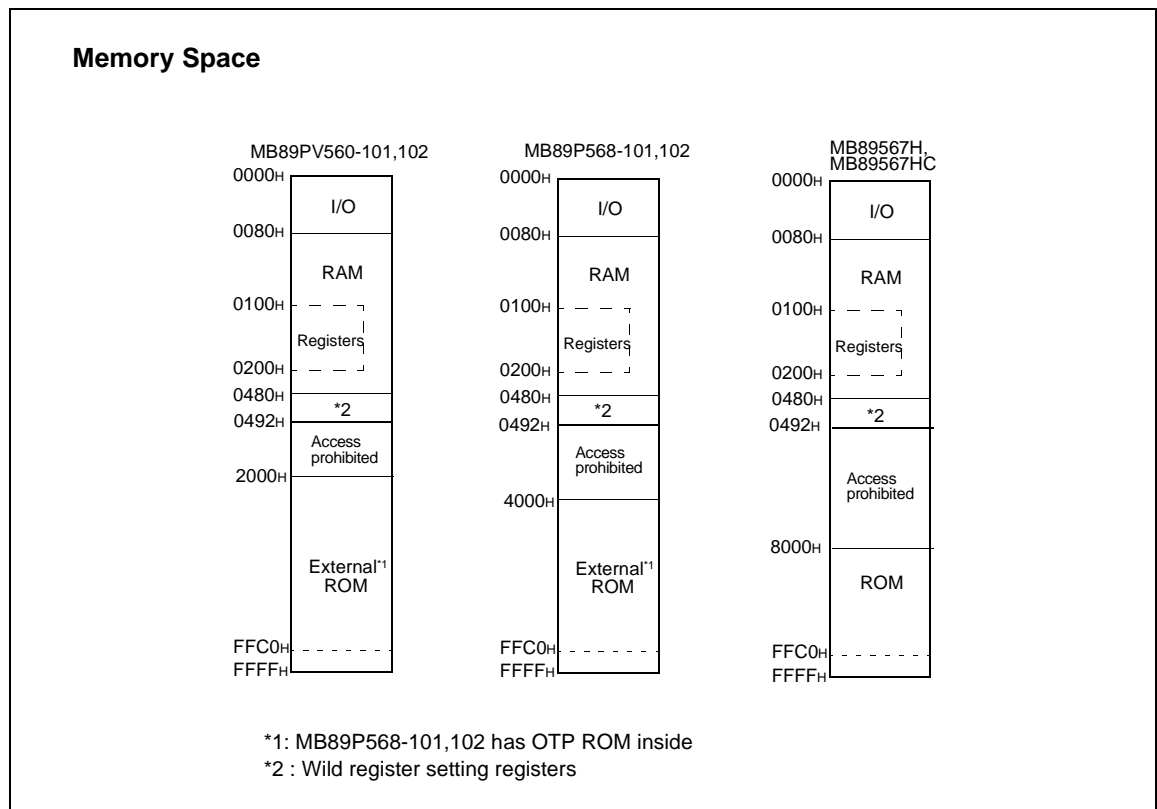

■ BLOCK DIAGRAM

■ CPU CORE

1. Memory Space

The microcontrollers of the MB89560H series offer a memory space of 64 Kbytes for storing all of I/O, data, and program areas. The I/O area is located the lowest address. The data area is provided immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is located at exactly the opposite end, that is, near the highest address. Provide the tables of interrupt reset vectors and vector call instructions toward the highest address within the program area. The memory space of the MB89560H series is structured as illustrated below.

MB89560H Series

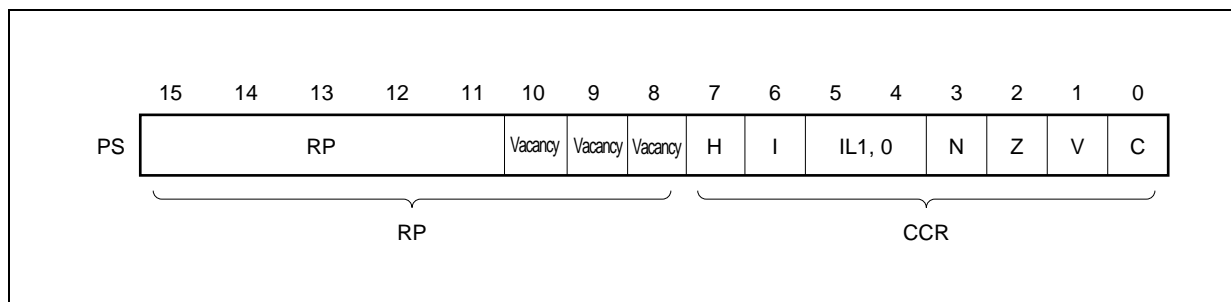

2. Registers

The F²MC-8L family has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The following registers are provided:

- Program counter (PC): A 16-bit register for indicating specifies instruction storage positions.
- Accumulator (A): A 16-bit temporary register for storing arithmetic operations, etc. When the instruction is an 8-bit data processing instruction, the lower byte is used.
- Temporary accumulator (T): A 16-bit register which performs arithmetic operations with the accumulator
When the instruction is an 8-bit data processing instruction, the lower byte is used.
- Index register (IX): A 16-bit register for index modification
- Extra pointer (EP): A 16-bit pointer for indicating a memory address
- Stack pointer (SP): A 16-bit register for indicating a stack area
- Program status (PS): A 16-bit register for storing a register pointer, a condition code

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR). (See the diagram below.)

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

H-flag: Set when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared otherwise. This flag is for decimal adjustment instructions.

I-flag: Interrupt is allowed when this flag is set to 1. Interrupt is prohibited when the flag is set to 0. Set to 0 when reset.

IL1, 0: Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	ILO	Interrupt level	High-low
0	0	1	High ↑ ↓ Low = no interrupt
0	1		
1	0	2	
1	1	3	

N-flag: Set if the MSB is set to 1 as the result of an arithmetic operation. Cleared when the bit is set to 0.

Z-flag: Set when an arithmetic operation results in 0. Cleared otherwise.

V-flag: Set if the complement on 2 overflows as a result of an arithmetic operation. Reset if the overflow does not occur.

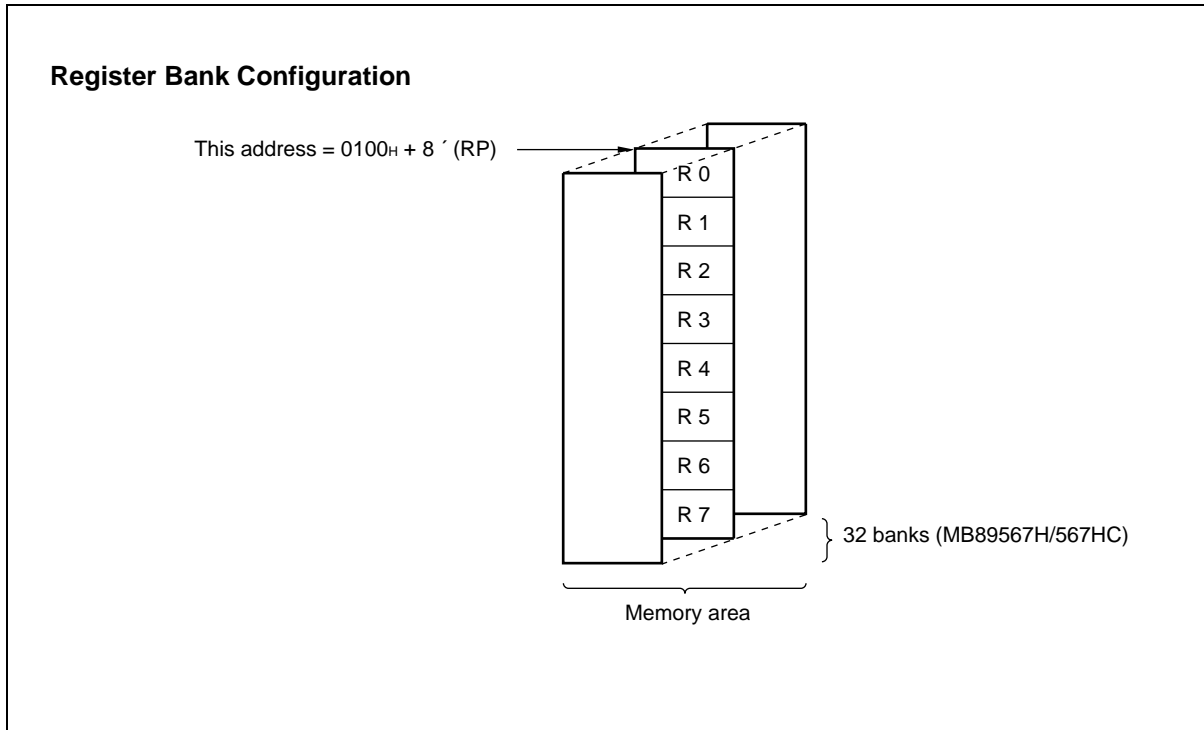

C-flag: Set when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared otherwise. Set to the shift-out value in the case of a shift instruction.

MB89560H Series

The following general-purpose registers are provided:

General-purpose registers: An 8-bit register for storing data

The general-purpose registers are 8 bits and located in the register banks of the memory. One bank contains eight registers. Up to a total of 32 banks can be used on MB89567H and MB89567HC. The bank currently in use is indicated by the register bank pointer (RP).

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

($AV_{SS} = V_{SS} = 0.0\text{ V}$)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V_{CC} AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	MB89567H, MB89567HC, MB89P568 and MB89PV560
	AVR	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
Program voltage	V_{PP}	$V_{SS} - 0.6$	$V_{SS} + 13.0$	V	Only for the MB89P568
Input voltage	V_I	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	For pins other than P30 and P31
		$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	For P30 and P31
Output voltage	V_O	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	For pins other than P30 and P31
		$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	For P30 and P31
"H" level maximum output current	I_{OL}	—	15	mA	
"L" level average output current	I_{OLAV}	—	4	mA	Average value (operating current × operating rate)
"L" level total maximum output current	ΣI_{OL}	—	100	mA	
"L" level total average output current	ΣI_{OLAV}	—	40	mA	Average value (operating current × operating rate)
"H" level maximum output current	I_{OH}	—	-15	mA	
"H" level average output current	I_{OHAV}	—	-4	mA	Average value (operating current × operating rate)
"H" level total maximum output current	ΣI_{OH}	—	-50	mA	
"H" level total average output current	ΣI_{OHAV}	—	-20	mA	Average value (operating current × operating rate)
Power consumption	P_D	—	300	mW	
Operating temperature	T_A	-40	+85	°C	
Storage temperature	T_{stg}	-55	+150	°C	

* : Use AV_{CC} and V_{CC} set at the same voltage.

Take care so that AVR and $AV_{CC} + 0.3\text{V}$ does not exceed V_{CC} , such as when power is turned on.

Precautions: Permanent device damage may occur if the above "Absolute Maximum Ratings" are exceeded.

Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

MB89560H Series

2. Recommended Operating Conditions

(AV_{SS} = V_{SS} = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V _{CC} AV _{CC}	3.5*	5.5*	V	For MB89567H and MB89567HC
		3.0	5.5	V	Retains the RAM state in stop mode for MB89567H and MB89567HC
		2.7*	5.5*	V	For MB89PV560 and MB89P568
		1.5	5.5	V	Retains the RAM state in stop mode for MB89PV560 and MB89P568
A/D converter reference input voltage	AVR	3.5	AV _{CC}	V	
Operating temperature	T _A	-40	+85	°C	

* : These values depend on the operating conditions and the analog assurance range. See Figure 1, Figure 2, Figure 3 and "5. A/D Converter Electrical Characteristics."

4. AC Characteristics

(1) Reset Timing

($V_{CC} = 5.0V$, $AV_{SS} = V_{SS} = 0.0 V$, $T_A = -40^{\circ}C$ to $+85^{\circ}C$)

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min.	Max.		
\overline{RST} "L" pulse width	t_{ZLZH}	—	48 t_{HCYL}^*	—	ns	

* : t_{HCYL} is the oscillation cycle ($1/F_C$) to input to the X0 pin.

(2) Power-on Reset

($AV_{SS} = V_{SS} = 0.0 V$, $T_A = -40^{\circ}C$ to $+85^{\circ}C$)

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min.	Max.		
Power supply rising time	t_R	—	0.5	50	ms	
Power supply cut-off time	t_{OFF}		1	—	ms	Due to repeated operations

Note: Make sure that power supply rises within the selected oscillation stabilization time.

For example, when the main clock is operating at 10 MHz (F_{CH}) and the oscillation stabilization time select option has been set to $2^{18}/F_{CH}$, the oscillation stabilization delay time is 26.2 ms. Therefore, the maximum value of power supply rising time is about 26.2 ms.

Rapid changes in power supply voltage may cause a power-on reset. If power supply voltage needs to be varied in the course of operation, a smooth voltage rise is recommended.

MB89560H Series

(3) Clock Timing

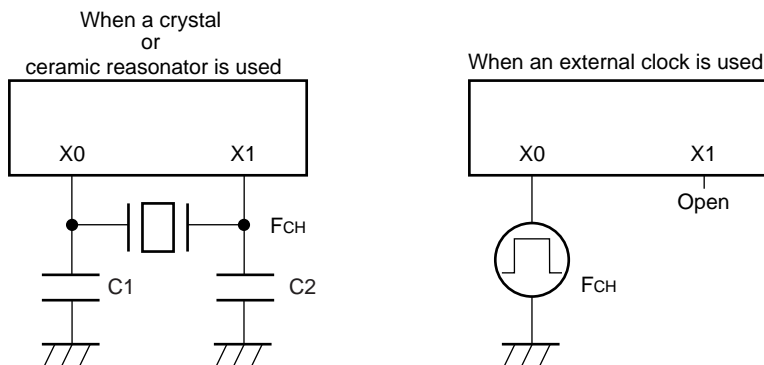

($A_{V_{SS}} = V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min.	Typ.	Max.		
Clock frequency	F_{CH}	X0, X1	1	—	12.5	MHz	Main clock
	F_{CL}	X0A, X1A	—	32.768	—	kHz	Subclock
Clock cycle time	t_{HCYL}	X0, X1	80	—	1000	ns	Main clock
	t_{LCYL}	X0A, X1A	—	30.5	—	μs	Subclock
Input clock pulse width	P_{WH} P_{WL}	X0	20	—	—	ns	External clock
	P_{WH} P_{WL}	X0A	—	15.2	—	μs	External clock
Input clock rising/falling time	t_{CR} t_{CF}	X0	—	—	10	ns	External clock

X0 and X1 Timing and Conditions

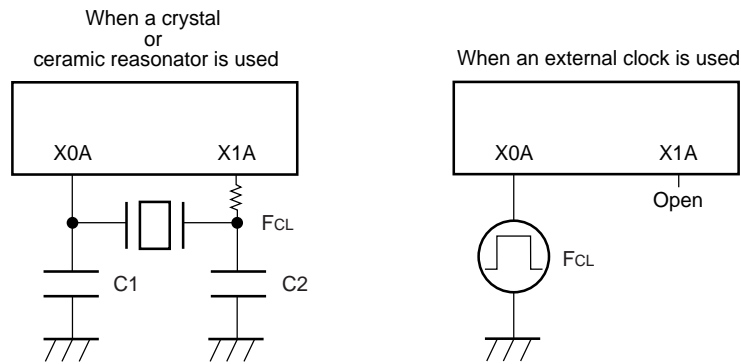

Main Clock Conditions

X0A and X1A Timing and Conditions

Subclock Conditions

(4) Instruction Cycle

Parameter	Symbol	Value	Unit	Remarks
Instruction cycle (minimum execution time)	t_{inst}	$4/F_{CH}$, $8/F_{CH}$, $16/F_{CH}$, $64/F_{CH}$	μs	$t_{inst} = 0.32 \mu s$ when operating at $F_{CH} = 12.5 \text{ MHz}$ ($4/F_{CH}$)
		$2/F_{CL}$	μs	$t_{inst} = 61.036 \mu s$ when operating at $F_{CL} = 32.768 \text{ kHz}$

MB89560H Series

(5) Serial I/O Timing

($V_{CC} = 5.0V$, $AV_{SS} = V_{SS} = 0.0V$, $T_A = -40^{\circ}C$ to $+85^{\circ}C$)

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min.	Max.		
Serial clock cycle time	t_{SCYC}	SCK, SCK1, UCK	Internal shift clock mode	$2 t_{inst}^*$	—	μs	
SCK $\downarrow \rightarrow$ SO time	t_{SLOV}	SCK, SO, SCK1, SO1, UCK, UO		-200	200	ns	
Valid SI \rightarrow SCK \uparrow	t_{IVSH}	SI, SCK, SI1, SCK1, UI, UCK		200	—	ns	
SCK $\uparrow \rightarrow$ valid SI hold time	t_{SHIX}	SCK, SI, SCK1, SI1, UCK, UI		200	—	ns	
Serial clock "H" pulse width	t_{SHSL}	SCK, SCK1, UCK	External shift clock mode	$1 t_{inst}^*$	—	μs	
Serial clock "L" pulse width	t_{LSLH}			$1 t_{inst}^*$	—	μs	
SCK $\downarrow \rightarrow$ SO time	t_{SLOV}	SCK, SO, SCK1, SO1, UCK, UO		0	200	ns

* : 1 For information on t_{inst}, see “(4) Instruction Cycle” in “4. AC Characteristics.”

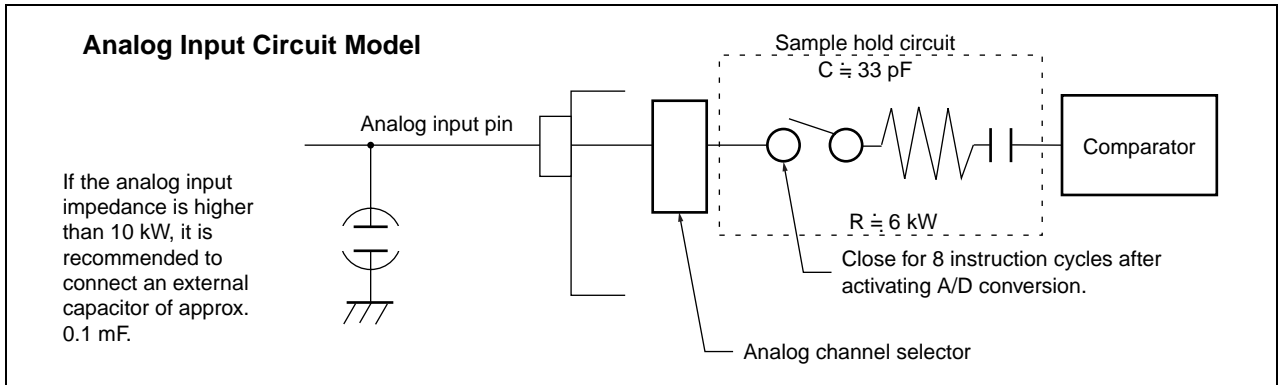

* : 2 When A/D conversion is not in operation, and the CPU is in STOP mode.

* : 3 Included sampling time

* :

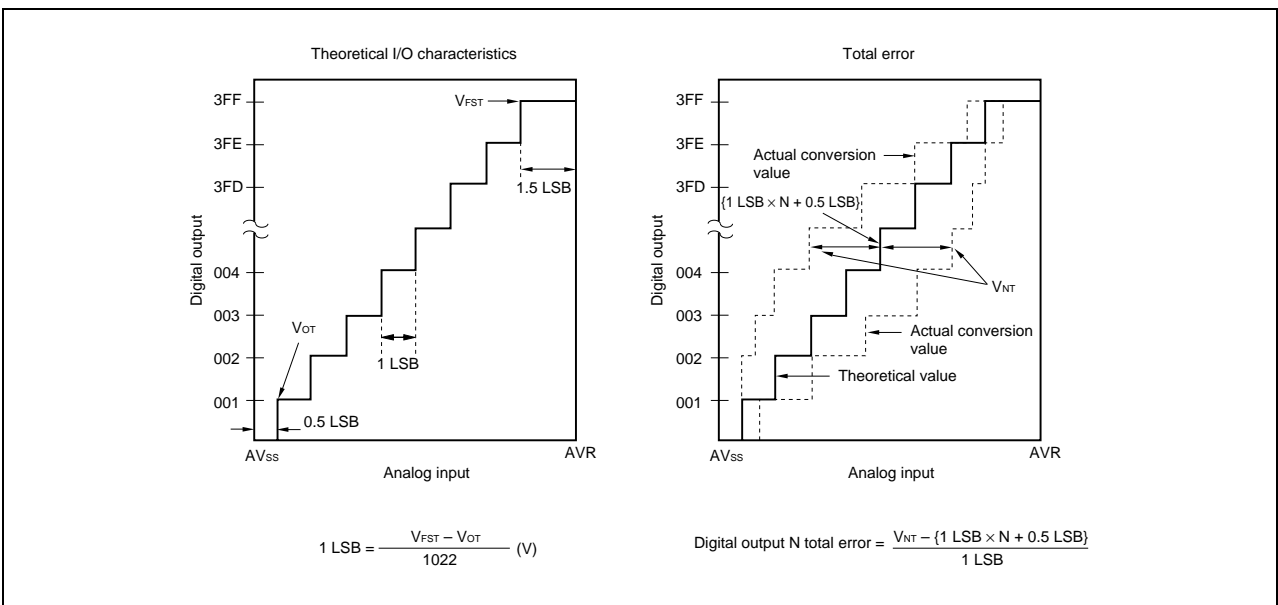

(3) Precautions

- The smaller the $|AVR - AV_{SS}|$, the greater the error would become relatively.
- The output impedance of the external circuit for the analog input must satisfy the following conditions:
Output impedance of the external circuit < Approx. 10 kΩ
- If the output impedance of the external circuit is too high, an analog voltage sampling time might be insufficient (sampling time = 6 μs at 10MHz oscillation.)

(4) A/D Converter Glossary

- Resolution
Analog changes that are identifiable with the A/D converter.
- Linearity error
The deviation of the straight line connecting the zero transition point (“00 0000 0000” ↔ “00 0000 0001”) with the full-scale transition point (“11 1111 1110” ↔ “11 1111 1111”) from actual conversion characteristics
- Differential linearity error
The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value
- Total error (unit: LSB)
The difference between theoretical and actual conversion values caused by the zero transition error, full-scale transition error, linearity error, quantization error, and noise

■ INSTRUCTIONS

Execution instructions can be divided into the following four groups:

- Transfer
- Arithmetic operation
- Branch
- Others

Table 1 lists symbols used for notation of instructions.

Table 1 Instruction Symbols

Symbol	Meaning
dir	Direct address (8 bits)
off	Offset (8 bits)
ext	Extended address (16 bits)
#vct	Vector table number (3 bits)
#d8	Immediate data (8 bits)
#d16	Immediate data (16 bits)
dir: b	Bit direct address (8:3 bits)
rel	Branch relative address (8 bits)
@	Register indirect (Example: @A, @IX, @EP)
A	Accumulator A (Whether its length is 8 or 16 bits is determined by the instruction in use.)
AH	Upper 8 bits of accumulator A (8 bits)
AL	Lower 8 bits of accumulator A (8 bits)
T	Temporary accumulator T (Whether its length is 8 or 16 bits is determined by the instruction in use.)
TH	Upper 8 bits of temporary accumulator T (8 bits)
TL	Lower 8 bits of temporary accumulator T (8 bits)
IX	Index register IX (16 bits)

(Continued)

MB89560H Series

(Continued)

Symbol	Meaning
EP	Extra pointer EP (16 bits)
PC	Program counter PC (16 bits)
SP	Stack pointer SP (16 bits)
PS	Program status PS (16 bits)
dr	Accumulator A or index register IX (16 bits)
CCR	Condition code register CCR (8 bits)
RP	Register bank pointer RP (5 bits)
Ri	General-purpose register Ri (8 bits, i = 0 to 7)
×	Indicates that the very × is the immediate data. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
(×)	Indicates that the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
((×))	The address indicated by the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)

Columns indicate the following:

Mnemonic: Assembler notation of an instruction

~: Number of instructions

#: Number of bytes

Operation: Operation of an instruction

TL, TH, AH: A content change when each of the TL, TH, and AH instructions is executed. Symbols in the column indicate the following:

- “–” indicates no change.
- dH is the 8 upper bits of operation description data.
- AL and AH must become the contents of AL and AH immediately before the instruction is executed.
- 00 becomes 00.

N, Z, V, C: An instruction of which the corresponding flag will change. If + is written in this column, the relevant instruction will change its corresponding flag.

OP code: Code of an instruction. If an instruction is more than one code, it is written according to the following rule:

Example: 48 to 4F ← This indicates 48, 49, ... 4F.

Table 2 Transfer Instructions (48 instructions)

Mnemonic	~	#	Operation	TL	TH	AH	NZVC	OP code
