

MOTOR CONTROL CIRCUIT—YD5530

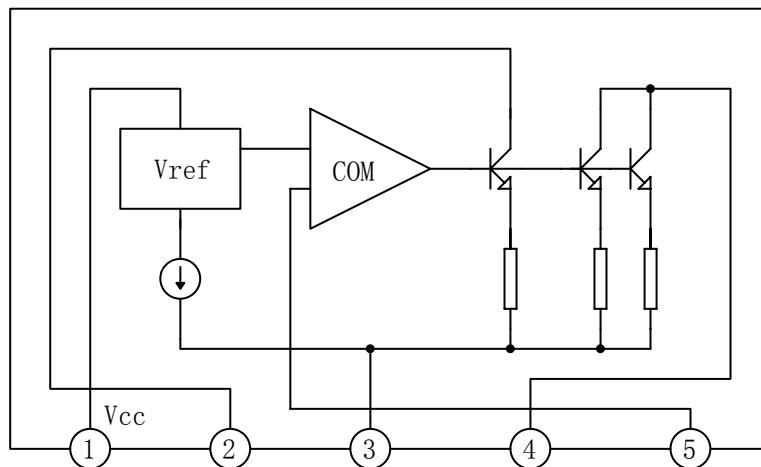

DESCRIPTION

The YD5530 is an IC designed for the rotating speed control of a compact DC motor which is used for a tape recorder, record played, etc.

FEATURES

- *Small four-lead plastic package for compact motor;
- *Fewer external parts;
- *Stable low reference voltage (0.49V typ.), wide motor speed setting;
- *Highly stable operation over a wide range of supply voltage and torque supply voltage: Vcc=4.5~16V;
- *Reverse voltage protection circuit is built-in.
