

706 8967 **NORTH POWDER-FREE NATURAL RUBBER AND ANTISTATIC NITRILE FINGER COTS**

North 100 Series Powder-Free Finger Cots undergo multiple washings to ensure they are free of powders and other contaminants remaining from the manufacturing process. Thin film at the top gives excellent tactility. High tensile strength minimizes tearing. Designed to fit finger taper, eliminating air space caused by excess bulk at the finger tips. The powder-free latex cots also come in 9 & 16 mil industrial weights for heavy-duty applications. North also offers powder-free nitrile cots, which are antistatic with a surface resistivity of 10^{11} ohms/sq.

Features

Multiple Washed Cots

Very Low Extractables

Powder Free

Latex Free

Multiple Sizes

Benefits

Powder free. Low particle count. Less potential for contamination of item being handled.

Less contamination from reactive ions.

Cots may be taken into cleanroom with confidence that contamination stays outside.

Excellent tactility.

Added comfort increases user acceptability, reduces fatigue.

Assures equal sensitivity in all critical areas.

Provides balanced protection to all areas covered.
