∆USA BeO

AZ5059013

#### **FEATURES**

- HIGH POWER BANDWIDTH 350kHz
- HIGH SLEW RATE 20V/μs
- FAST SETTLING TIME 600ns
- LOW CROSSOVER DISTORTION Class A/B
- LOW INTERNAL LOSSES 1.2V at 2A
- HIGH OUTPUT CURRENT ±5A PEAK
- LOW INPUT BIAS CURRENT FET Input
- ISOLATED CASE 300 VDC

PEX ® utech ∆USA BeO AZ5059013 NOTICE

PA02

## **APPLICATIONS**

SEE ORDER OF DATA FOR ERRATA INFORMATION

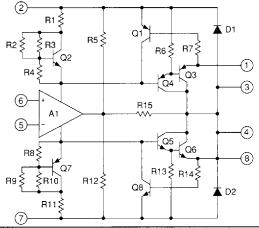

- MOTOR, VALVE AND ACTUATOR CONTROL
- MAGNETIC DEFLECTION CIRCUITS UP TO 5A
- POWER TRANSDUCERS UP TO 350 kHz
- AUDIO AMPLIFIERS UP TO 30W RMS

#### DESCRIPTION

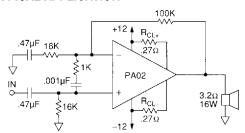

The PA02 and PA02A are wideband, high output current operational amplifiers designed to drive resistive, inductive and capacitive loads. Their complementary "collector output" stage can swing close to the supply rails and is protected against inductive kickback. For optimum linearity, the output stage is biased for class A/B operation. The safe operating area (SOA) can be observed for all operating conditions by selection of user programmable, current limiting resistors (down to 10mA). Both amplifiers are internally compensated for all gain settings. For continuous operation under load, mounting on a heatsink of proper rating is recommended.

These hybrid integrated circuits utilize thick film (cermet) resistors, ceramic capacitors and semiconductor chips to maximize reliability, minimize size and give top performance. Ultrasonically bonded aluminum wires provide reliable interconnections at all operating temperatures. The 8-pin TO-3 package is hermetically sealed and electrically isolated. Isolation washers are not recommended. The use of compressible isolation washers may void the warranty.

#### **SCHEMATIC**

#### TYPICAL APPLICATION

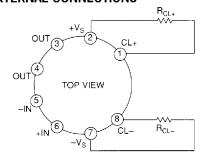

LOW INTERNAL LOSS MAXIMIZES EFFICIENCY

#### Vehicular Sound System Power Stage

When system voltages are low and power is at a premium, the PA02 is a natural choice. The circuit above utilizes not only the feature of low internal loss of the PA02, but also its very low distortion level to implement a crystal clear audio amplifier suitable even for airborne applications. This circuit uses AC coupling of both the input signal and the gain circuit to render DC voltage across the speaker insignificant. The resistor and capacitor across the inputs form a stability enhancement network (refer to Application Note 1). The 0.27 ohm current limit resistors provide protection in the event of an output short circuit.

- NOTES: \* The specification of PA02A is identical to the specification for PA02 in applicable column to the left.
  - Long term operation at the maximum junction temperature will result in reduced product life. Derate internal power dissipation to achieve high MTTF.
  - 2. The power supply voltage for all specifications is the TYP rating unless otherwise noted as a test condition.
  - 3. +V<sub>S</sub> and -V<sub>S</sub> denote the positive and negative supply rail respectively. Total V<sub>S</sub> is measured from +V<sub>S</sub> to -V<sub>S</sub>.
  - 4. Rating applies if the output current alternates between both output transistors at a rate faster than 60Hz.
  - 5. Exceeding CMV range can cause the output to latch.

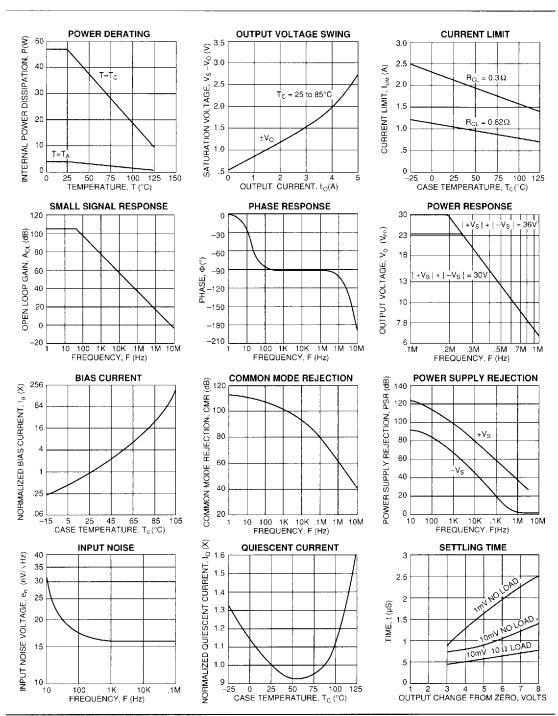

CAUTION The i

The internal substrate contains beryllia (BeO). Do not break the seal. If accidentally broken, do not crush, machine, or subject to temperatures in excess of 850°C to avoid generating toxic fumes.

OPERATING CONSIDERATIONS

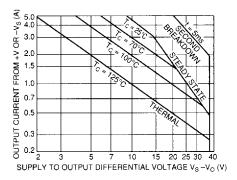

#### **GENERAL**

Please read the "General Operating Considerations" section which covers stability, supplies, heatsinking, mounting, current limit, SOA interpretation, and specification interpretation. Additional information can be found in the application notes. For information on the package outline, heatsinks, and mounting hardware, consult the "Accessory and Package Mechanical Data" section of the handbook.

### SAFE OPERATING AREA (SOA)

The SOA curves combine the effect of all limits for this Power Op Amp. For a given application, the direction and magnitude of the output current should be calculated or measured and checked against the SOA curves. This is simple for resistive loads but more complex for reactive and EMF generating loads. The following guidelines may save extensive analytical efforts:

 Under transient conditions, capacitive and dynamic\* loads up to the following maximums are safe:

#### CAPACITIVE LOAD

#### INDUCTIVE LOAD

± <b>V</b> s	I <sub>LIM</sub> = 2A	I <sub>UM</sub> = 5A	l <sub>lim</sub> = 2A	I <sub>LIM</sub> = 5A
18V	2mF	0.7mF	.2H	10mH
15V	10mF	2.2mF	.7H	25mH
10V	25mF	10mF	5H	50mH

- If the inductive load is driven near steady state conditions, allowing the output voltage to drop more than 80 below the supply rail with 1<sub>i,m</sub> = 5A, or 17V below the supply rail with 1<sub>i,m</sub> = 2A while the amplifier is current limiting, the inductor should be capacitively coupled or the current limit must be lowered to meet SOA criteria.
- The amplifier can handle any EMF generating or reactive load and short circuits to the supply rails or shorts to common if the current limits are set as follows at T<sub>C</sub> = 85°C.

$\pm \mathbf{V_s}$	SHORT TO $\pm V_{\mathrm{s}}$ C, L OR EMF LOAD	SHORT TO COMMON		
18V	.5A	1.7 <b>A</b>		
15V	.7 <b>A</b>	2.8A		
10V	1.6A	4.2A		

These simplified limits may be exceeded with further analysis using the operating conditions for a specific application.

#### **CURRENT LIMIT**

Proper operation requires the use of two current limit resistors, connected as shown in the external connection diagram. The minimum value for  $R_{\rm cl.}$  is 0.12 ohm, however for optimum reliability it should be set as high as possible. Refer to the "General Operating Considerations" section of the handbook for current limit adjust details.

#### **DEVICE MOUNTING**

The case (mounting flange) is electrically isolated and should be mounted directly to a heatsink with thermal compound. Screws with Belville spring washers are recommended to maintain positive clamping pressure on heatsink mounting surfaces. Long periods of thermal cycling can loosen mounting screws and increase thermal resistance.

Since the case is electrically isolated (floating) with respect to the internal circuits it is recommended to connect it to common or other convenient AC ground potential.

first transfer and the second

#### **FEATURES**

- LOWER DISTORTION THAN PA02
- PROVIDES PA02 PERFORMANCE HIGH SLEW RATE  $20V/\mu s$  LOW  $V_{sat}$  1.2V at 2A HIGH OUTPUT CURRENT  $\pm 5A$

#### **APPLICATIONS**

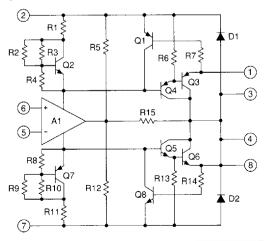

- PRECISION ELECTROMAGNETIC DEFLECTION
- AUDIO AMPLIFIERS

#### DESCRIPTION

The PA02D is a lower distortion PA02. Class A/B bias current has been increased in the output stage to improve THD. It is a wideband, high output current operational amplifier designed to drive resistive, inductive and capacitive loads. Its complementary "collector output" stage can swing close to the supply rails and is protected against inductive kickback. For optimum linearity, the output stage is biased for class A/B operation. The safe operating area (SOA) can be observed for all operating conditions by selection of user programmable, current limiting, resistors (down to 10mA). The amplifier is internally compensated for all gain settings. For continuous operation under load, mounting on a heatsink of proper rating is recommended.

These hybrid integrated circuits utilize thick film (cermet) resistors, ceramic capacitors and semiconductor chips to maximize reliability, minimize size and give top performance. Ultrasonically bonded aluminum wires provide reliable interconnections at all operating temperatures. The 8-pin TO-3 package is hermetically sealed and electrically isolated. Isolation washers are not recommended. The use of compressible thermal interface washers and improper mounting will void the warranty.

# **EQUIVALENT SCHEMATIC**

#### **SPECIFICATIONS**

Specifications of the standard PA02, except for quiescent current, apply with the benefit of lower distortion ratings. Design changes enabling lower distortion have no effect on the shape of the typical performance graphs, except for harmonic distortion.

#### HARMONIC DISTORTION .01 $A_{\rm M} = -1$ $LOAD = 10\Omega$ .0085 DISTORTION, THD (%) .007 / / 20 **5**ľ .0055 QO .004 .0025 .001 300 зк 10K 30K .1M 3M 100
