

AUM 10W Ultra Low Profile DC – DC Module

(Pb-free reflow compatible and ROHS Compliant)

The AUM 10W series is Astec's new Ultra Low Profile, 48Vin, SMT isolated single output modules with only 7.7mm height. The series also comes with enhanced features such as Remote on/off (RC), parallel Application (PO), Power Good (ALM), and the protection of OVP, OCP and UVLO.

Electrical Parameters

Input

Input range	36 – 60Vdc
Efficiency	89% @5Vo

Control

Enable	ON: RC pin connected to –Vin or Open OFF: RC pin connected to +Vin
--------	---

Output

Line / Load Regulation	+/-5%
Ripple and Noise	50mVp-p
OVP	120% of Vonom (Latch-up)
OCP	3.1A for 1.5V –3.3V 2.1A for 5V
LVP	90% of Vonom (Latch-up)
Isolation	1500VDC (1 minute)

Special Features

- Ultra Low Profile – 7.7mm height
- Efficiency – 88% @ 5V
- -40 °C to +80°C Operating ambient temperature (with 0.2m/s airflow)
- Open Frame SMT
- Low output ripple and noise
- Regulation to zero load
- CISPR22, Class A for Conduct and Radiated EMI
- Parallel Application
- UL/cUL 1950, CE Mark
- Pb-free reflow compatible and ROHS Compliant

ABSOLUTE MAXIMUM RATINGS

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or in any other conditions in excess of those given in the operational sections of the specs. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

SAFETY APPROVAL

The AUM (10W) is certified under the following agencies:

- UL/cUL 1950, and CE Mark.

The module shall not be considered approved and carry safety agency logos until this has been authorized by Safety and QA / QC management.

Basic Operation and Features

Over Current Limit Inception (OCP)

The Isolated DC-DC converter limits output current when the current is over the maximum output current due to abnormality such as overload or short circuit. When over current condition continues and output voltage decreases to the point of low voltage protection, the DC-DC converter will be in latch up mode. To restore the output, remove the abnormality and re-set the input voltage under 5V for 1 second minimum.

Over Voltage Protection (OVP)

The Isolated DC-DC converter stops the operation when the output voltage is over the specified Over Voltage Protection point, the converter will be in latch up mode after 0.5ms*. To restore the output, re-set the input voltage under 5V for 1 second minimum.

Notes*: Output voltage might exceed the point at which OVP starts to function under the specific condition of transient input voltage or output current change. Therefore, OVP is set to wait for the mask time 0.5ms.

Low Voltage Protection (LVP)

If output voltage is under the specified Low Voltage Protection point, the converter will halt the operation. After typical 500ms mask period, the converter will be in latch up mode. To restore the output, re-set the input voltage under 5V for 1 second minimum.

Remote On/Off Control (RC)

If RC pin is open or connected to -Vin, the converter is turned on. If RC is connected to +Vin, the converter is turned off.

Alarm Output (ALM)

The Alarm output will be down to the -Vin level (Open Drain Output) at the condition of Over Voltage Protection or Low Voltage Protection. The maximum sink current in ALM pin is 10mA. When operating in parallel application, all operating units can be simultaneously halt by connecting all the ALM pins together, in the condition of Over Voltage Protection or Low Voltage Protection caused by any single converter. Maximum number for parallel operation is 10 units

Synchronous Turn On/Off

Connect the PO (parallel Operation) pins of all operating units together will synchronize the turn on / off time in parallel application.

Reflow Soldering Information

Soldering

I) Flux

Solder the products with Rosin Flux (0.2wt%. chloride or less).

Do not use acid or soluble flux, because they may damage metallic parts and glass parts and may cause defective or reduce quality.

II) Solder

SnAgCu solder compatible

III) Condition of Soldering – Recommended soldering profile (J-STD-020C):

Reflow Profile	:	Infrared or air blow
Preheating	:	150 – 200 deg C for 60 to 150sec
Peak temperature	:	240 ± 5 deg C at surface.
Maximum period above 220deg.C	:	20 – 60sec
Ramp rate	:	lower than 4 deg C / sec
Times	:	Max 2 times (see below recommendation) .

Recommendation

Do not give vibration to products while solder melts under reflow process.

Please handle to wait for products cooled down enough.

Please don't reflow a motherboard mounted the products on the lower side such as a below figure, because the products surely fall down from the motherboard.

Recommend Storage Condition

Maximum storage period:	6 months
Storage condition:	30 deg C, 60%RH

Recommend baking the module at 100degC for 24 hours if storage period is longer than 6 months.
