SELECTABLE-OUTPUT CRYSTAL OSCILLATOR

SPG series

- Capable of selecting 57 varieties of frequency output.
- Low current consumption.
- Easy to mount DIP 16-pin package.

Explanation of terminal

Programs dividing ratio. (pull-down resistor incorporated.)

(b) OUT : Output frequency preset by CTL1 to 6.

(refer to the procedure for setting output frequency.)

(c) FOUT: Constantly outputs the oscillation source frequency of builtin

crystal unit.

(d) RESET: Stops output at RESET= "L". (pull-up resistor incorporated.)

(e) TEST: Used for the input terminal for testing. When CTL4 is H,

output will be 1000 times larger than the preset value at

TEST= "H". (pull-down resistor incorporated.)

(f) EXC (8640N only): Serves as input terminal when using an external clock by

changing to the builtin oscillator. Effective only when CSEL is H.

(g) CSEL (8640N only): When this terminal is made H, the external clock is selected.

(pull-down resistor incorporated.)

(Note) Treatment of empty terminals. When RESET terminal is not used, this should be connected to VDD, and when TEST terminal, CSEL terminal, and CTL 1 to 6 terminals are not used, to GND.

Explanation of terminal (8650 O)

(a) CLOCK: Clock input (max. 1 MHz) (b) ENABLE: Be sure to connect to VDD

THE CRYSTALMASTER

ENERGY SAVING EPSON

EPSON offers effective savings to its customers through a wide range of electronic devices, such as semiconductors, liquid crystal display (LCD) modules, and crystal devices. These savings are achieved through a sophisticated melding of three different efficiency technologies.

Power saving technology provides low power consumption at low voltages.

Space saving technology provides further reductions in product size and weight through super-precise processing and high-density assembly technology.

Time saving technology shortens the time required for design and development on the customer side and shortens delivery times.

Our concept of Energy Saving technology conserves resources by blending the essence of these three efficiency technologies. The essence of these technologies is represented in each of the products that we provide to our customers.

In the industrial sector, leading priorities include measures to counter the greenhouse effect by reducing CO2,

measures to preserve the global environ-

ment, and the development of energyefficient products. Environmental
problems are of global concern, and
although the contribution of energysaving technology developed by
EPSON may appear insignificant,
we seek to contribute to the develop-

ment of energy-saving products by our

customers through the utilization of our electronic devices. EPSON is committed to the conservation of energy, both for the sake of people and of the planet on which we live.
