

LDS6025

PureTouch™ Capacitance Touch IC with Integrated Keypad LED Drivers

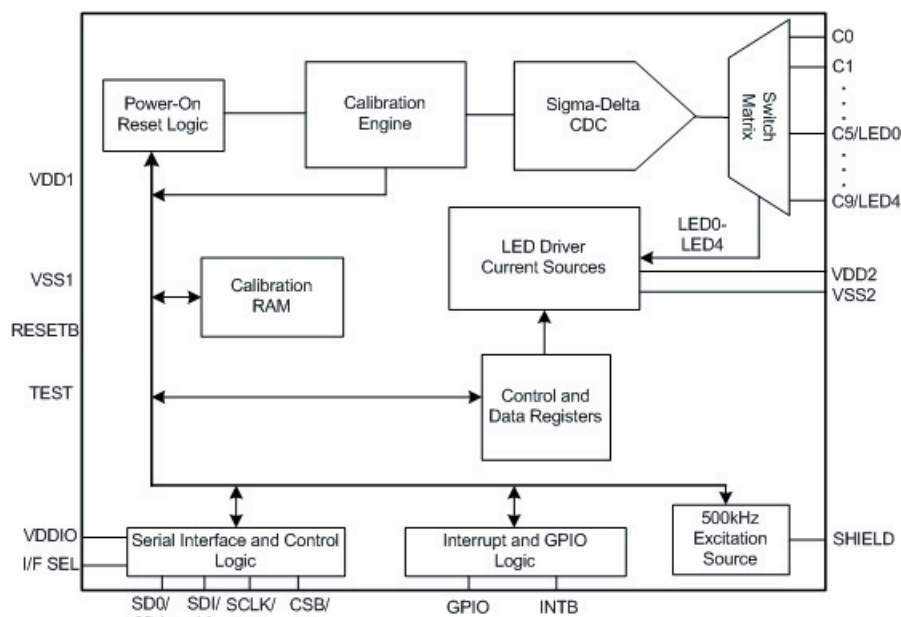

The LDS6025 is a programmable capacitance-to-digital converter (CDC) designed for use with capacitive sensor arrays implementing touch-based input controls including sliders, scroll wheels, and buttons. Featuring 10 sensor inputs, 5 of which are dual-purpose I/O's configurable as either capacitive sensor inputs or keypad LED drivers, the LDS6025 provides the flexibility to implement multiple touch inputs with integrated lighting effects using a single controller.

When configured for capacitive sensing, the I/O's are directed through an integrated switch matrix to a 500 kHz sigma-delta CDC which senses changes in the external sensor array. When a sufficiently large change in capacitance occurs, a sensor activation is registered and the host processor is notified. LED lighting effects are automatically initiated by a touch event with no processor intervention required.

On-chip calibration logic continuously monitors the environment and automatically adjusts on-and-off threshold levels to prevent false sensor activation.

The LDS6025 is offered with both SPI-compatible and I²C-compatible interfaces (active interface selected by I/F Select pin) and features a general-purpose input/output (GPIO) and interrupt output for additional communication with the host processor.

LDS6025 Block Diagram

LDS6025 Features

Versatile, Accurate Capacitance-to-Digital Converter (CDC)

- 500kHz sigma-delta CDC
- 10 capacitance sensor input channels
- 2ms update rate per active sensor

Integrated Keypad LED Drivers

- C5-C9 sensor inputs configurable as keypad LED drivers
- 7.75mA maximum driving current (up to 39mA available by connecting multiple outputs to a single LED)
- Flexible dimming control
- Processor-free synchronization with touch events

Integrated, Automatic Calibration Algorithms

- Environmental compensation
- On-chip RAM to store calibration data

Integrated Touch Preference Modes

- Strongest Single Touch
- Strongest Two Touches
- Unrestricted (All) Touches

Ultra-low Touch Sensor Power Consumption*

- Operating mode (typical): <150uW (VDD1=1.8V)
- Shutdown mode (typical): <1uW (VDD1=1.8V)

* Excludes LED driver current and I/F and voltage dependent V_{DDIO} current

Integrated Keypad LED Drivers

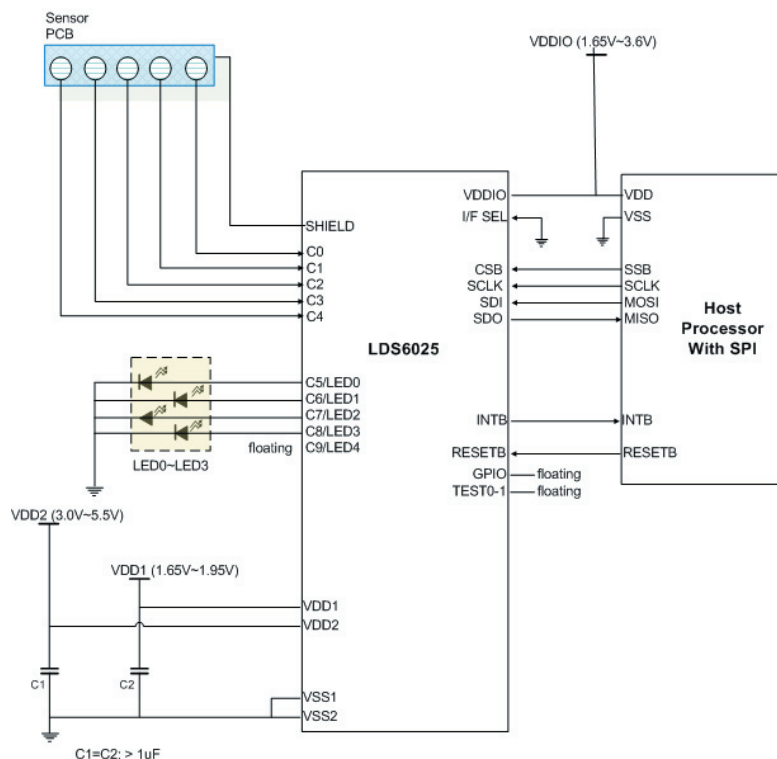

The LDS6025 features integrated keypad LED drivers enabling the implementation of visual feedback for touch-based controls and fun lighting effects. The keypad LEDs may be powered either from V_{battery} directly or from a regulated voltage supply. On/off transition times are programmed globally for all LEDs and maximum current may be programmed for each LED individually. LEDs may be either manually controlled or synchronized to automatically trigger when a touch event occurs.

Ideal Solution for Portable Applications

The LDS6025 is optimized for minimal power consumption, with touch sensor circuits operating from a 1.8v supply voltage. In full power mode, sensor conversion and calibration occur continuously, minimizing the time between touch event and touch detection. With its ultra-low touch sensor power consumption of <150uW (typical), the LDS6025 may be operated continuously in full power mode, eliminating the need for introduced latencies that can cause noticeable delays and degrade the user experience.

The total solution footprint is also optimized for portable applications, with the functionality of multiple components consolidated into a single device. With integrated keypad LED driver functionality, the LDS6025 is a flexible solution combining the functionality of two discrete ICs into a compact 4mm x 4mm TQFN package with 0.75mm package thickness (SSOP package also available).

LDS6025 Application Diagram

Flexible Interface Options

- SPI-compatible serial I/F
- I²C-compatible serial I/F
- Separate V_{DDIO} level for serial interface
- GPIO and Interrupt Output

Flexible Package Options:

- 28 pin 4mm x 4mm QFN, 0.8mm max height
- 28 pin 5.3mm x 10.2mm SSOP, 1.99mm max height

Power Supply Range:

- Touch Supply (VDD1): 1.65V - 1.95V
- LED Supply (VDD2): 3.0V - 5.5V
- V_{DDIO}=1.65V - 3.6V

Applications:

- Mobile handsets and smartphones
- Personal music and media players (MP3/MP4)
- Gaming devices
- Remote controls
- Television, A/V
- Set-top boxes
- Multi-function printers
- Enterprise telephony
