

LOC110

Linear Optocoupler

DESCRIPTION

CP Clare's LOC110 Linear Optocouplers feature an infra-red LED optically coupled with two phototransistors. One feedback phototransistor is used to generate a control signal that provides a servomechanism to the LED drive current thus compensating for the LED's nonlinear time and temperature characteristics. The other (output) phototransistor provides an output signal that is linear with respect to the servo LED current.

FEATURES

- PCMCIA Compatible 8 Pin Flatpack or DIP Package
- Couples Analog and Digital Signals
- Wide Bandwidth (>200KHz)
- High Gain Stability
- Low Input/Output Capacitance
- Low Power Consumption
- 5000 V_{RMS} Input/Output Isolation Available
- 0.01% Servo Linearity
- THD 87 dB Typical
- UL Recognized: File Number E76270
- BSI Certified to BS415:1990 Certificate Numbers 7691 & 7693 (Flatpack Version)
- BSI Certified to BS EN60950:1992 (BS7002:1992) Certificate Numbers 7692 & 7694 (Flatpack Version)
- Complies with the Applicable Requirements of EN 41003:1993

APPLICATIONS

- Digital Telephone Isolation
- Power Supply Feedback Voltage/Current
- Medical Sensor Isolation
- Audio Signal Interfacing
- Isolate Process Control Transducers
- Modem Transformer Replacement With No Insertion Loss

- The LOC110 is shipped in antistatic tubes of 50 pieces. Each tube will contain one K3 sorted bin.
- Bin designation marked on each device (A-J).
- Orders for the LOC110 product will be shipped using the bins available at the date of the order. Any bin (A-J) can be shipped.
- For customers requiring selected bins (D E F G) we offer part number LOC111. Please call for data sheet.
