CMOS STATIC RAMS 16K (4K x 4-BIT) Separate Data Inputs and Outputs

IDT71681SA/LA
IDT71682SA/LA

FEATURES:

- Separate data inputs and outputs
- IDT71681SA/LA: outputs track inputs during write mode
- IDT71682SA/LA: high-impedance outputs during write mode
- High speed (equal access and cycle time)
 - Military: 15/20/25/35/45/55/70/85/100ns (max.)
 - Commercial: 15/20/25/35/45ns (max.)
- Low power consumption
- Battery backup operation—2V data retention (LA version only)
- High-density 24-pin 300-mil Ceramic or Plastic DIP, 24-pin CERPACK, and 28-pin leadless chip carrier
- Produced with advanced CMOS high-performance technology
- CMOS process virtually eliminates alpha particle soft-error rates
- Military product compliant to MIL-STD-883, Class B

DESCRIPTION:

The IDT71681/IDT71682 are 16,384-bit high-speed static RAMs organized as 4K x 4. They are fabricated using IDT's high-performance, high-reliability technology—CMOS. This state-of-the-art technology, combined with innovative circuit design techniques, provides a cost-effective approach for high-speed memory applications.

Access times as fast as 15ns are available. These circuits also offer a reduced power standby mode. When $\overline{CS}$ goes HIGH, the circuit will automatically go to, and remain in, this standby mode as long as $\overline{CS}$ remains HIGH. In the standby mode, the devices consume less than 10 μ W, typically. This capability provides significant system-level power and cooling savings. The low-power (LA) versions also offer a battery backup data retention capability where the circuit typically consumes only 1 μ W operating off a 2V battery.

All inputs and outputs of the IDT71681/IDT71682 are TTL-compatible and operate from a single 5V supply.

DESCRIPTION (Continued):

The IDT71681/IDT71682 are packaged in either space-saving 24-pin, 300-mil DIPs, CERPACKS, or 28-pin leadless chip carriers.

Military grade product is manufactured in compliance with the latest revision of MIL-STD-883, Class B, making it ideally suited to military temperature applications demanding the highest level of performance and reliability.

NOTE:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

NOTES:

- $\overline{WE}$ or $\overline{CS}$ must be HIGH during all address transitions
- If the $\overline{CS}$ goes HIGH simultaneously with $\overline{WE}$ HIGH, the outputs remain in a high-impedance state
- Transition is measured $\pm 200\text{mV}$ from steady state
- For IDT71681 only
- For IDT71682 only
- A write occurs during the overlap of a LOW $\overline{CS}$ and a LOW $\overline{WE}$
- t_{wr} is measured from the earlier of $\overline{CS}$ or $\overline{WE}$ going HIGH to the end of the write cycle
- All write cycle timings are referenced from the last valid address to the first transitioning address
