

LC75848T

1/8 to 1/10 Duty General-Purpose LCD Display Drivers

Overview

The LC75848T is 1/8 to 1/10 duty general-purpose LCD display drivers used for character and graphics display. These products operate under the control of a microcontroller and can directly drive an LCD with up to 930 segments. They can also control up to 4 general-purpose output ports.

Features

- 1/8duty–1/4bias, 1/9duty–1/4bias, and 1/10duty–1/4bias drive schemes can be controlled from serial data.
 - 1/8duty–1/4bias: up to 760 segments
 - 1/9duty–1/4bias: up to 846 segments
 - 1/10duty–1/4bias: up to 930 segments
- Serial data input supports CCB format communication with the system controller.
- Serial data control of the power-saving mode based backup function and all the segments forced off function.
- The frame frequency of the common and segment output waveforms can be controlled from the serial data.
- Direct display of display data without the use of a decoder provides high generality.
- Built-in display contrast adjustment circuit.
- Up to 4 general-purpose output ports are included.
- Independent LCD driver block power supply V_{LCD} .
- The $\overline{INH}$ pin is provided. This pin turns off the display and forces the general-purpose output ports to the low level.
- RC oscillator circuit

Package Dimensions

unit: mm

3257-TQFP120

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

LC75848T

Pin Functions

Pin	Pin No.	Function	Active	I/O	Handling when unused
S1 to S93 S94/COM10 S95/COM9	1 to 93 94 95	Segment driver outputs. The S94/COM10 and S95/COM9 pins can be used as common driver outputs under the control data.	—	O	Open
COM1 to COM8	103 to 96	Common driver outputs.	—	O	Open
P1 to P4	104 to 107	General-purpose output ports.	—	O	Open
OSC	116	Oscillator connection. An oscillator circuit is formed by connecting an external resistor and capacitor at this pin.	—	I/O	V _{DD}
CE	118	Serial data transfer inputs. These pins are connected to the microcontroller. CE :Chip enable CL :Synchronization clock DI :Transfer data	H	I	GND
CL	119			I	
DI	120		—	I	
$\overline{\text{INH}}$	117	Input that turns the display off and forces the general-purpose output ports low. • When $\overline{\text{INH}}$ is low (V _{SS}) • Display off S1 to S93 = "L" (V _{LCD4}). S94/COM10, S95/COM9 = "L" (V _{LCD4}) COM1 to COM8 = "L" (V _{LCD4}). • General-purpose output ports P1 to P4 = low (V _{SS}) • When $\overline{\text{INH}}$ is high (V _{DD}) • Display on • The states of the general-purpose output ports can be set by the PC1 to PC4 control data. However, serial data can be transferred when the $\overline{\text{INH}}$ pin is low.	L	I	GND
V _{LCD0}	110	LCD drive 4/4 bias voltage (high level) supply pin. The level on this pin can be changed by the display contrast adjustment circuit. However, (V _{LCD0} – V _{LCD4}) must be greater than or equal to 4.5 V. Also, external power must not be applied to this pin since the pin circuit includes the display contrast adjustment circuit.	—	O	Open
V _{LCD1}	111	LCD drive 3/4 bias voltage (middle level) supply pin. This pin can be used to supply the 3/4 (V _{LCD0} – V _{LCD4}) voltage level externally.	—	I	Open
V _{LCD2}	112	LCD drive 2/4 bias voltage (middle level) supply pin. This pin can be used to supply the 2/4 (V _{LCD0} – V _{LCD4}) voltage level externally.	—	I	Open
V _{LCD3}	113	LCD drive 1/4 bias voltage (middle level) supply pin. This pin can be used to supply the 1/4 (V _{LCD0} – V _{LCD4}) voltage level externally.	—	I	Open
V _{LCD4}	114	LCD drive 0/4 bias voltage (low level) supply pin. Fine adjustment of the display contrast can be implemented by connecting an external variable resistor to this pin. However, (V _{LCD0} – V _{LCD4}) must be greater than or equal to 4.5 V, and V _{LCD4} must be in the range 0 V to 1.5 V, inclusive.	—	I	GND
V _{DD}	108	Logic block power supply connection. Provide a voltage of between 2.7 and 6.0V.	—	—	—
V _{LCD}	109	LCD driver block power supply connection. Provide a voltage of between 7.0 and 11.0 V when the display contrast adjustment circuit is used and provide a voltage of between 4.5 and 11.0 V when the circuit is not used.	—	—	—
V _{SS}	115	Power supply connection. Connect to ground.	—	—	—

Serial Data Transfer Format

1. 1/8 duty

① When CL is stopped at the low level

- When the display data is transferred.

- When the control data is transferred.

Note: B0 to B3, A0 to A3 CCB address
DD Direction data

- ② When CL is stopped at the high level
 - When the display data is transferred.

- When the control data is transferred.

Note: B0 to B3, A0 to A3 CCB address
DD..... Direction data

- CCB address: 83H
- D1 to D760: Display data
- PC1 to PC4: General-purpose output port state setting data
- CT0 to CT3, CTC: Display contrast setting data
- SC: Segment on/off control data
- BU: Normal mode/power saving mode control data
- FC: Data that sets the frame frequency of the common and segment output waveforms
- DT1, DT2: Display technique setting data

2. 1/9 duty

① When CL is stopped at the low level

- When the display data is transferred.

- When the control data is transferred.

Note: B0 to B3, A0 to A3 CCB address
DD..... Direction data

② When CL is stopped at the high level

- When the display data is transferred.

- When the control data is transferred.

Note: B0 to B3, A0 to A3 CCB address
DD..... Direction data

- CCB address: 83H
- D1 to D846: Display data
- PC1 to PC4: General-purpose output port state setting data
- CT0 to CT3, CTC: Display contrast setting data
- SC: Segment on/off control data
- BU: Normal mode/power saving mode control data
- FC: Data that sets the frame frequency of the common and segment output waveforms
- DT1, DT2: Display technique setting data

3. 1/10 duty

① When CL is stopped at the low level

- When the display data is transferred.

- When the control data is transferred.

Note: B0 to B3, A0 to A3 CCB address
DD..... Direction data

② When CL is stopped at the high level

- When the display data is transferred.

- When the control data is transferred.

Note: B0 to B3, A0 to A3 CCB address
DD..... Direction data

- CCB address: 83H
- D1 to D930: Display data
- PC1 to PC4: General-purpose output port state setting data
- CT0 to CT3, CTC: Display contrast setting data
- SC: Segment on/off control data
- BU: Normal mode/power saving mode control data
- FC: Data that sets the frame frequency of the common and segment output waveforms
- DT1, DT2: Display technique setting data

Control Data Functions

1. PC1 to PC4: General-purpose output port state setting data

These control data bits set the states of the general-purpose output ports P1 to P4.

Output pin	P1	P2	P3	P4
General-purpose output port state setting data	PC1	PC2	PC3	PC4

For example, if PC1 and PC2 are set to 1, and PC3 and PC4 are set to 0, then the output pins P1 and P2 will output high levels (V_{DD}) and the output pins P3 and P4 will output low levels (V_{SS}).

2. CT0 to CT3, CTC: Display contrast setting data

These control data bits set the display contrast.

CT0 to CT3: Display contrast setting (11 steps)

CT0	CT1	CT2	CT3	LCD drive 4/4 bias voltage supply V_{LCD0} level
0	0	0	0	$0.94 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 2)$
1	0	0	0	$0.91 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 3)$
0	1	0	0	$0.88 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 4)$
1	1	0	0	$0.85 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 5)$
0	0	1	0	$0.82 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 6)$
1	0	1	0	$0.79 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 7)$
0	1	1	0	$0.76 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 8)$
1	1	1	0	$0.73 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 9)$
0	0	0	1	$0.70 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 10)$
1	0	0	1	$0.67 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 11)$
0	1	0	1	$0.64 V_{LCD} = V_{LCD} - (0.03 V_{LCD} \times 12)$

CTC: Display contrast adjustment circuit state setting

CTC	Display contrast adjustment circuit state
0	The display contrast adjustment circuit is disabled, and the V_{LCD0} pin level is forced to the V_{LCD} level.
1	The display contrast adjustment circuit operates and the display contrast is adjusted.

Note that although the display contrast can be adjusted by operating the built-in display contrast adjustment circuit, it is also possible to apply fine adjustments to the contrast by connecting an external variable resistor to the V_{LCD4} pin and modifying the V_{LCD4} pin voltage. However, the following conditions must be met: $(V_{LCD0} - V_{LCD4}) \geq 4.5 \text{ V}$, and $1.5 \text{ V} \geq V_{LCD4} \geq 0 \text{ V}$.

3. SC: Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

However, note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

4. BU: Normal mode/power saving mode control data

This control data bit controls the normal mode and power saving mode.

BU	Mode
0	Normal mode
1	Power saving mode The common and segment pins go to the V_{LCD4} level and the oscillator on the OSC pin is stopped. Note that the states of the general-purpose output ports P1 to P4 are set by PC1 to PC4 in the control data during power saving mode as well as normal mode.

5. FC: Data that sets the frame frequency of the common and segment output waveforms

This control data sets the frame frequency of the common and segment output waveforms.

FC	Frame frequency		
	1/8 duty 1/4 bias drive f8 [Hz]	1/9 duty 1/4 bias drive f9 [Hz]	1/10 duty 1/4 bias drive f10 [Hz]
0	$\frac{f_{osc}}{512}$	$\frac{f_{osc}}{576}$	$\frac{f_{osc}}{640}$
1	$\frac{f_{osc}}{256}$	$\frac{f_{osc}}{288}$	$\frac{f_{osc}}{320}$

6. DT1, DT2: Display technique setting data

This control data bits set the display technique.

DT1	DT2	Display technique	Output pins	
			S95/COM9	S94/COM10
0	0	1/8 duty 1/4 bias drive	S95	S94
1	0	1/9 duty 1/4 bias drive	COM9	S94
0	1	1/10 duty 1/4 bias drive	COM9	COM10

Notes: Sn (n = 94 or 95): Segment outputs
COMn (n = 9 or 10): Common outputs

For example, the table below lists the segment output states for the S11 output pin.

Display data										Output pin state (S11)
D101	D102	D103	D104	D105	D106	D107	D108	D109	D110	
0	0	0	0	0	0	0	0	0	0	The LCD segments for COM1 to COM10 are off
1	0	0	0	0	0	0	0	0	0	The LCD segment for COM1 is on
0	1	0	0	0	0	0	0	0	0	The LCD segment for COM2 is on
0	0	1	0	0	0	0	0	0	0	The LCD segment for COM3 is on
0	0	0	1	0	0	0	0	0	0	The LCD segment for COM4 is on
0	0	0	0	1	0	0	0	0	0	The LCD segment for COM5 is on
0	0	0	0	0	1	0	0	0	0	The LCD segment for COM6 is on
0	0	0	0	0	0	1	0	0	0	The LCD segment for COM7 is on
0	0	0	0	0	0	0	1	0	0	The LCD segment for COM8 is on
0	0	0	0	0	0	0	0	1	0	The LCD segment for COM9 is on
0	0	0	0	0	0	0	0	0	1	The LCD segment for COM10 is on
1	1	1	1	1	1	1	1	1	1	The LCD segments for COM1 to COM10 are on

1/8 Duty, 1/4 Bias Drive Technique

$$\left(\begin{array}{ll} \text{When FC in the control data is 0.} & f_8 = \frac{f_{osc}}{512} \\ \text{When FC in the control data is 1.} & f_8 = \frac{f_{osc}}{256} \end{array} \right)$$

1/9 Duty, 1/4 Bias Drive Technique

$$T_9 = \frac{1}{f_9}$$

$$\left(\begin{array}{l} \text{When FC in the control data is 0. } f_9 = \frac{f_{osc}}{576} \\ \text{When FC in the control data is 1. } f_9 = \frac{f_{osc}}{288} \end{array} \right)$$

1/10 Duty, 1/4 Bias Drive Technique

$$T_{10} = \frac{1}{f_{10}}$$

$$\left(\begin{array}{l} \text{When FC in the control data is 0. } f_{10} = \frac{f_{osc}}{640} \\ \text{When FC in the control data is 1. } f_{10} = \frac{f_{osc}}{320} \end{array} \right)$$

The $\overline{\text{INH}}$ Pin and Display Control

Since the IC internal data (the display data and the control data) is undefined when power is first applied, applications should set the $\overline{\text{INH}}$ pin low at the same time as power is applied to turn off the display (This sets the S1 to S93, S94/COM10, S95/COM9, and COM1 to COM8 to the V_{LCD4} level and the P1 to P4 to the V_{SS} level.) and during this period send serial data from the controller. The controller should then set the $\overline{\text{INH}}$ pin high after the data transfer has completed. This procedure prevents meaningless displays at power on. (See figures 3, 4, and 5.)

Power Supply Sequence

The following sequences must be observed when power is turned on and off. (See figures 3, 4, and 5.)

- Power on :Logic block power supply(V_{DD}) on $\rightarrow$ LCD driver block power supply(V_{LCD}) on
- Power off:LCD driver block power supply(V_{LCD}) off $\rightarrow$ Logic block power supply(V_{DD}) off

However, if the logic and LCD driver blocks use a shared power supply, then the power supplies can be turned on and off at the same time.

Notes on Transferring Display Data from the Controller

The display data is transferred to the LC75848T in seven operations. All of the display data should be transferred within 30 ms to maintain the quality of the displayed image.

Sample Application Circuit 1

1/8 duty, 1/4 bias drive technique (for use with normal panels)

Note: *2. If a variable resistor is not used for display contrast fine adjustment, the V_{LCD4} pin must be connected to ground.

Sample Application Circuit 2

1/8 duty, 1/4 bias drive technique (for use with large panels)

Note: *2. If a variable resistor is not used for display contrast fine adjustment, the V_{LCD4} pin must be connected to ground.

Sample Application Circuit 3

1/9 duty, 1/4 bias drive technique (for use with normal panels)

Note: *2. If a variable resistor is not used for display contrast fine adjustment, the V_{LCD4} pin must be connected to ground.

Sample Application Circuit 4

1/9 duty, 1/4 bias drive technique (for use with large panels)

Note: *2. If a variable resistor is not used for display contrast fine adjustment, the V_{LCD4} pin must be connected to ground.

Sample Application Circuit 5

1/10 duty, 1/4 bias drive technique (for use with normal panels)

Note: *2. If a variable resistor is not used for display contrast fine adjustment, the V_{LCD4} pin must be connected to ground.

Sample Application Circuit 6

1/10 duty, 1/4 bias drive technique (for use with large panels)

Note: *2. If a variable resistor is not used for display contrast fine adjustment, the V_{LCD4} pin must be connected to ground.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

This catalog provides information as of April, 2002. Specifications and information herein are subject to change without notice.
