Low phase noise LO generator for VSAT applications

Rev. 1 — 12 July 2010

**Objective data sheet** 

# 1. General description

The TFF11105HN is a  $K_u$  band frequency generator intended for low phase noise Local Oscillator (LO) circuits for  $K_u$  band VSAT transmitters and transceivers. The specified phase noise complies with IESS-308 from Intelsat.

#### CAUTION

This device is sensitive to ElectroStatic Discharge (ESD). Therefore care should be taken during transport and handling.

# 2. Features and benefits

- Phase noise compliant with IESS-308 (Intelsat) in combination with appropriate source
- LO generator with VCO range from 10.30 GHz to 10.80 GHz
- Input signal 40 MHz to 675 MHz
- Divider settings 16, 32, 64, 128 or 256
- Output level –5 dBm; stability ±2 dB
- Third or fourth order PLL
- Internally stabilized voltage references for loop filter

# 3. Applications

VSAT up converters

Local oscillator signal generation

# 4. Quick reference data

## 9.2 Pin description

Symbol	Pin	Description
VREGVCO	1	Regulated output voltage for VCO loop filter. Connect loop filter to this pin.
CPOUT	2	Charge pump output.
VTUNE	3	Tuning voltage for VCO.
NSL0	4	Divider setting, LSB. Leave open for "1", connect to GND for "0". See Table 8.
NSL1	5	Divider setting. Leave open for "1", connect to GND for "0". See <u>Table 8</u> .
NSL2	6	Divider setting, MSB. Leave open for "1", connect to GND for "0". See Table 8.
LCKDET	7	Lock detect. Lock = 2.5 V; out of lock = 0 V. See <u>Table 6</u> .
GND1(REF)	8	Ground for REF input. Connect this pin to the exposed diepad landing.
IN(REF)_P	9	Reference signal, non-inverting input. Couple this AC to the source.
IN(REF)_N	10	Reference signal, inverting input. Couple this AC to the source.
GND2(REF)	11	Ground for REF input. Connect this pin to the exposed diepad landing.
$V_{CC(REF)}$	12	Supply of the internal regulated voltages. Decouple this pin against GND2(REF) (pin 11).
V <sub>CC(DIV)</sub>	13	Supply of the divider and PFD/CP. Decouple this pin against GND(DIV) (pin 14).
GND(DIV)	14	Ground of the divider. Connect this pin to the exposed diepad landing.
n.c.	15	not connected
n.c.	16	not connected
GND1(BUF)	17	Ground for RF output. Connect this pin to the exposed diepad landing.

BUF1_N	20	RF output.
BUF2_N	21	RF output.
BUF1_P	22	RF output.
BUF2_P	23	RF output.
GND3(BUF)	24	Ground for RF output. Connect this pin to the exposed diepad landing.

# **10. Functional description**

The TFF11105HN consists of the following blocks:

- PLL
- Output buffer
- Lock detector
- Reference input
- Divider settings

The functionality of the blocks will be discussed below.

#### 10.1 PLL

The PLL is formed by the VCO, DIVIDER (possible settings: 16, 32, 64, 128 and 256 (see <u>Table 8</u>)) and a PFD/CP. The tune voltage is referred to the band gap regulated voltage: VREGVCO (pin 1).

The loop filter can be set to type 2 or type 3. If a type 2 filter is used, the pins CPOUT (pin 2) and VTUNE (pin 3) must be interconnected. A 10 pF capacitor is placed internally between pins CPOUT (pin 2) and VREGVCO (pin 1), and a 30 pF capacitor is placed between pins VTUNE (pin 3) and VREGVCO (pin 1). See <u>Figure 4</u> and <u>Figure 5</u>. Values for the loop filter components are given in Table 5.

The VCO input voltage range is between 0.1 and 0.9  $V_{O(reg)VCO}$ .

# **TFF11105HN**

#### Low phase noise LO generator for VSAT applications

#### Table 5. Component values used for characterization

f <sub>i(ref)</sub>	Divider value	C1	C2	C3	R1	R2
(MHz)		(nF)	(pF)	(pF)	<b>(</b> Ω <b>)</b>	<b>(</b> Ω <b>)</b>
40.234 to 42.188	256	27	82	33	470	560
80.469 to 84.375	128	18	82	33	330	560
160.938 to 168.750	64	18	120	33	270	560
321.875 to 337.500	32	33	270	33	120	560
643.750 to 675.000	16	68	560	33	68	560

#### 10.2 Output buffer

The output consists of a differential pair with 50  $\Omega$  collector resistors R<sub>BUF\_P</sub> and R<sub>BUF\_N</sub>. If only one output is used, terminate the non used output with the same impedance as the load (see Figure 8)

#### 10.3 Lock detector

The lock detector is the output of a window detector. The window detector compares the output voltage over the charge pump. This voltage is identical to VTUNE when a type 2 loop filter is used (see Figure 4). In case of a type 3 loop filter this voltage is filtered by R2/C3 (see Figure 5). Due to this filtering the attack and decay time will decrease.

The lower window detector threshold voltage is 7 % of the output voltage on VREGVCO (pin 1), the upper window detector threshold voltage is 93 % of the output voltage on VREGVCO (pin 1). The hysteresis is 0.1 V. The output is 2.5 V CMOS compliant. The values are shown in <u>Table 6</u>. The timing diagram is shown in <u>Figure 6</u>.

At start-up the LCKDET (pin 7) will be LOW until the circuit has acquired lock.

TFF11105HN Objective data sheet

#### **NXP Semiconductors**

#### Low phase noise LO generator for VSAT applications

 Table 6.
 Logical value and physical value for lock detect (LCKDET)

Logical value	Physical value	Lock detect state
0	0 V	out of lock
1	2.5 V	lock

LCKDET (pin 7) has a pull-down resistor of 100 k $\Omega$  to GND1(REF) (pin 8).

(1) The attack time and decay time are typically 10 µs and are mainly depending on the drift of the VCO tuning voltage.

Fig 6. Timing diagram lock detector

#### 10.4 Reference input (IN(REF)\_P, IN(REF)\_N)

The reference input is a differential pair and is internally biased. The input is high ohmic. The input signal must be AC coupled. If used in a single ended mode, the not used input must be terminated with the same impedance as the driving source.

An example of the differential source and two single ended loads are shown in <u>Figure 7</u>. An example of a single ended application is shown in <u>Figure 8</u>.

TFFTTTUSHIN		
Objective	data	sheet

-----

Note that the phase noise of the output signal is also determined by the phase noise of the reference signal. The reference frequency range is equal to the output frequency / division value. Note that the output frequency is guaranteed from 10.30 GHz to 10.80 GHz.

#### 10.5 Divider settings (NSL2, NSL1, NSL0)

The divider can be set to 16, 32, 64, 128 and 256 (See <u>Table 8</u>). The logic levels for NSL0 (pin 4), NSL1 (pin 5) and NSL2 (pin 6) are given in Table 7.

The pins have a pull-up resistor of 100 k $\Omega$  to V<sub>CC(DIV)</sub> (pin 13).

The device is only guaranteed when NSL2, NSL1 and NSL0 are predefined at start-up (no change of divider value is allowed during operation).

#### Table 7. Logical and physical value for divider setting (NSL2, NSL1, NSL0)

Logical value	Physical value
0	GND
1	open or V <sub>CC</sub>

The truth table is shown in Table 8.

#### Table 8. Divider setting as function of NSL2, NSL1 and NSL0

Setting number	NSL2	NSL1	NSL0	Divider value
0	0	0	0	16
1	0	0	1	32
2	0	1	0	64
3	0	1	1	128
4	1	0	0	256
5	1	0	1	<u>[1]</u>
6	1	1	0	<u>[1]</u>
7	1	1	1	<u>[1]</u>

[1] Test mode, divider output will be disabled.

#### **19.1 Data sheet status**

Document status[1][2]	Product status <sup>[3]</sup>	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <a href="http://www.nxp.com">http://www.nxp.com</a>.

#### **19.2 Definitions**

**Draft** — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

**Product specification** — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

#### 19.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

**Applications** — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <a href="http://www.nxp.com/profile/terms">http://www.nxp.com/profile/terms</a>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

**No offer to sell or license** — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

**Export control** — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from national authorities.
