## **CBTU4411**

# 11-bit DDR2 SDRAM MUX/bus switch with 12 $\Omega$ ON resistance Rev. 03 — 12 October 2009 Product data sheet

#### **General description** 1.

This 11-bit bus switch is designed for 1.7 V to 1.9 V V<sub>DD</sub> operation and SSTL\_18 select input levels.

Each Host port pin (HPn) is multiplexed to one of four DIMM port pins (xDPn). The selection of the DIMM port to be connected to the Host port is controlled by a decoder driven by three hardware select pins S0, S1 and EN. Driving pin EN HIGH disconnects all DIMM ports from their respective host ports. When EN is driven LOW, pins S0 and S1 select one of four DIMM ports to be connected to their respective host port. When disconnected, any DIMM port is terminated to the externally supplied voltage V<sub>bias</sub> by means of an on-chip pull-down resistor of typically 400  $\Omega$ . The ON-state connects the Host port to the DIMM port through a 12  $\Omega$  nominal series resistance. The design is intended to have only one DIMM port active at any time.

The CBTU4411 can also be configured to support a differential strobe signal on channel 10 (TRUE) and channel 9 (complementary Strobe). When its LVCMOS configuration input strobe enable (STREN) is HIGH, channel 10 is pulled up to 3/4 of V<sub>DD</sub> internally by a resistive divider when the DIMM port is idle. When the CBTU4411 is disabled ( $\overline{\text{EN}}$  = HIGH in Strobe mode), the pull-down on channel 10 is disabled for current savings, pulling channel 10 to V<sub>DD</sub>. When strobe enable (STREN) is LOW, channel 10 behaves the same as all other channels.

The select inputs (S0, S1) are pseudo-differential type SSTL\_18. A reference voltage should be provided to input pin VREF at nominally 0.5V<sub>DD</sub>. This topology provides accurate control of switching times by reducing dependency on select signal slew rates. S0 and S1 are provided with selectable input termination to 0.5V<sub>DD</sub> (active when LVCMOS input TERM is HIGH). When the CBTU4411 is disabled ( $\overline{\text{EN}} = \text{HIGH}$ ), both S0 and S1 inputs are pulled LOW.

The part incorporates a very low crosstalk design. It has a very low skew between outputs (< 30 ps) and low skew (< 30 ps) for rising and falling edges. The part has optimal performance in DDR2 data bus applications.

Each switch has been optimized for connection to 1- or 2-rank DIMMs.

The low internal RC time constant of the switch allows data transfer to be made with minimal propagation delay.

The CBTU4411 is characterized for operation from 0 °C to +85 °C.

#### 11-bit DDR2 SDRAM MUX/bus switch with 12 $\Omega$ ON resistance

#### 2. Features

- Enable (EN) and select signals (S0, S1) are SSTL 18 compatible
- Optimized for use in Double Data Rate 2 (DDR2) SDRAM applications
- Suitable to be used with 400 Mbit/s to 800 Mbit/s, 200 MHz to 400 MHz DDR2 data
- Switch ON-resistance is designed to eliminate the need for series resistor to DDR2 SDRAM
- 12 Ω ON-resistance
- Controlled enable/disable times support fast bus turnaround
- Pseudo-differential select inputs support accurate and low-skew control of switching times
- Selectable built-in termination resistors on the Sn inputs
- Internal 400 Ω pull-down resistors on xDPn port
- VBIAS input for optimal DIMM-port pull-down when disabled
- Configurable to support differential strobe with pull-up to  $\frac{3}{4}$  of  $V_{DD}$  on channel 10 when idle
- Low differential skew
- Matched rise/fall slew rate
- Low crosstalk data-data/data-DQM
- Simplified 1: 4 switch position control by 2-bit encoded input
- Single input pin puts all bus switches in OFF (high-impedance) position
- Latch-up protection exceeds 500 mA per JESD78
- ESD protection exceeds 1500 V HBM per JESD22-A114, 200 V MM per JESD22-A115, and 750 V CDM per JESD22-C101

### 5.2 Pin description

Table 2. Pin description

Symbol	Pin	Description
HP0 to HP10	B5, B8, B10, D10, G10, K10, K8, K5, K3, J2, F2	Host ports
EN	C2	LVCMOS level enable input (active LOW). When connected HIGH, all DIMM ports will be disconnected (show a high-impedance path) from the Host ports.
STREN	A2	Strobe enable. LVCMOS level strobe enable input (active HIGH). When tied LOW, channel 10 (HP10 and its DP ports) functions identically to all other channels. When tied HIGH, channel 10 is designated as the Strobe channel (see Section 6.1 "Function selection", Figure 2 and Figure 3).
S0	B2	Select inputs; type SSTL_18. See Section 6.1 "Function
S1	A1	selection".
VREF	C1	Reference voltage for the pseudo-differential SSTL_18 select inputs (S0, S1).
VBIAS	D1	Voltage bias for the DIMM port pull-down resistor ( $R_{pd}$ ).
TERM	B1	LVCMOS level input pin activates termination resistance on Sn inputs when HIGH; high-impedance when LOW.
0DP0, 1DP0, 2DP0, 3DP0	A4, A5, A6, B6	DIMM port 0
0DP1, 1DP1, 2DP1, 3DP1	B7, A7, A8, A9	DIMM port 1
0DP2, 1DP2, 2DP2, 3DP2	A10, A11, B11, C11	DIMM port 2
0DP3, 1DP3, 2DP3, 3DP3	C10, D11, E10, E11	DIMM port 3
0DP4, 1DP4, 2DP4, 3DP4	F11, G11, H10, H11	DIMM port 4

**Table 5. S0, S1 input termination** *H* = *HIGH voltage level; L* = *LOW voltage level; X* = *Don't care.* 

oag	. The transfer to tag the tag to tag						
EN	TERM	Sn input termination					
L	L	Termination resistors on S0, S1 inputs disconnected (high-impedance).					
L	Н	Termination resistors on S0, S1 inputs active.					
Н	Χ	Pull-down to GND via $R_T \times 2$ . Also disables the S0, S1 input receivers for power savings.					

### 11-bit DDR2 SDRAM MUX/bus switch with 12 $\Omega$ ON resistance

### 7. Limiting values

Table 6. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134). The package thermal impedance is calculated in accordance with JESD 51.

Symbol	Parameter	Conditions	Min	Max	Unit
$V_{DD}$	supply voltage		-0.5	+2.5	V
$I_{IK}$	input clamping current	$V_{I/O} < 0 V$	-	-50	mA
$V_{I}$	input voltage	S0, S1 pins only	<u>[1]</u> _	$V_{DD} + 0.3$	V
		except S0, S1 pins	<u>[1]</u> –0.5	+2.5	V
$T_{stg}$	storage temperature		-65	+150	°C

<sup>[1]</sup> The input and output negative voltage ratings may be exceeded if the input and output clamping current ratings are observed.

### 8. Recommended operating conditions

**Table 7.** Operating conditions

All unused control inputs of the device must be held at  $V_{DD}$  or GND to ensure proper device operation.

Symbol	Parameter	Conditions		Min	Тур	Max	Unit
$V_{DD}$	supply voltage			1.7	-	1.9	V
$V_{ref}$	reference voltage			$0.49 \times V_{DD}$	$0.50\times V_{DD}$	$0.51 \times V_{DD}$	V
$V_{\text{bias}}$	bias voltage	pull-down resistor input	[1]	0	$0.30\times V_{DD}$	$0.33\times V_{DD}$	V
$V_{T}$	termination voltage			$V_{\text{ref}} - 0.04$	$V_{ref}$	$V_{ref} + 0.04$	V
Vi	input voltage			0	-	$V_{DD}$	V
$V_{\text{IH(AC)}}$	AC HIGH-level input voltage	S0, S1 inputs		V <sub>ref</sub> + 0.250	-	-	V
$V_{IL(AC)}$	AC LOW-level input voltage	S0, S1 inputs		-	-	$V_{ref} - 0.250$	V
$V_{IH(DC)}$	DC HIGH-level input voltage	S0, S1 inputs		V <sub>ref</sub> + 0.125	-	-	V
$V_{\text{IL}(DC)}$	DC LOW-level input voltage	S0, S1 inputs		-	-	$V_{ref} - 0.125$	V
$V_{IH}$	HIGH-level input voltage	$\overline{EN}$ , STREN, TERM pins		$0.65 \times V_{DD}$	-	-	V
$V_{IL}$	LOW-level input voltage	$\overline{EN}$ , STREN, TERM pins		-	-	$0.35 \times V_{DD}$	V
T <sub>amb</sub>	ambient temperature	operating in free air		0	-	+85	°C

<sup>[1]</sup>  $V_{bias} > 0.5 \times V_{DD}$  is reserved for test purposes only.

### 11-bit DDR2 SDRAM MUX/bus switch with 12 $\Omega$ ON resistance

### 9. Static characteristics

Table 8. Static characteristics

 $T_{amb} = 0 \,^{\circ}C$  to +85  $^{\circ}C$ 

Symbol	Parameter	Conditions		Min	Typ[1]	Max	Unit
$V_{IK}$	input clamping voltage	$V_{DD} = 1.7 \text{ V}; I_I = -18 \text{ mA}$		-	-	-1.2	V
V <sub>T</sub>	termination voltage	on S0, S1 inputs when Sn = open circuit and TERM = HIGH		$0.5V_{DD} - 0.04$	0.5V <sub>DD</sub>	0.5V <sub>DD</sub> + 0.04	V
$V_{ m pu}$	pull-up voltage	channel 10 DIMM port; $\overline{EN}$ = LOW; $V_{bias}$ = 0.54 V; $V_{DD}$ = 1.8 V; STREN = HIGH; unselected DIMM port		0.5V <sub>DD</sub> + 0.25	0.75V <sub>DD</sub>	0.75V <sub>DD</sub> + 0.25	V
l <sub>Li</sub>	input leakage current	$\begin{split} &V_{DD} = 1.8 \text{ V; } V_{I} = V_{DD} \text{ or GND;} \\ &Sn = V_{DD}; V_{bias} = V_{DD}; \\ &TERM = LOW \end{split}$					
		S0, S1		-	-	±100	μΑ
		host port		-	-	±100	μΑ
		DIMM port		-	-	±100	μΑ
I <sub>DD</sub>	supply current	$V_{DD} = 1.8 \text{ V; } I_{O} = 0 \text{ A;}$ $V_{I} = V_{DD} \text{ or GND}$					
		EN = LOW		-	6	9	mΑ
		EN = HIGH		-	5	100	μΑ
C <sub>in</sub>	input capacitance	S0, S1 pins; $V_I = 1.8 \text{ V or } 0 \text{ V}$		-	3	-	pF
Con	switch on capacitance	$V_{I} = 0.9 V$		-	4	6	pF
R <sub>ON</sub>	ON resistance	$V_{DD}$ = 1.8 V; $V_{HPn}$ = $V_{ref}$ ; $V_{xDPn}$ = $V_{ref}$ ± 250 mV	[2]	7	12	17	Ω
		$V_{DD}$ = 1.8 V; $V_{HPn}$ = $V_{ref}$ ; $V_{xDPn}$ = $V_{ref}$ ± 500 mV	[2]	7	12	17	Ω
$\Delta R_{ON}$	ON resistance mismatch between channels	variation over channel voltage; $\overline{EN}$ = LOW; $V_{bias}$ = 0.54 V; $V_{DD}$ = 1.8 V; STREN = LOW; selected DIMM port		-	1.8	2.5	Ω
		$V_{HPn} = 0.5V_{DD} + 250 \text{ mV}$ and $V_{xDPn} = 0.5V_{DD} - 250 \text{ mV}$					
$R_{pd}$	pull-down resistance	$\overline{\text{EN}}$ = HIGH; V <sub>bias</sub> = 0.54 V; V <sub>DD</sub> = 1.8 V		280	400	520	Ω
		channel 10; STREN = LOW		280	400	520	Ω
		channel 10; STREN = HIGH		780	1120	1460	Ω
R <sub>PU</sub>	pull-up resistance	$\overline{\text{EN}}$ = HIGH; V <sub>bias</sub> = 0.54 V; V <sub>DD</sub> = 1.8 V; channel 10; STREN = HIGH		430	622	810	Ω
R <sub>T</sub>	termination resistance	Sn input; Thevenin equivalent (see Figure 1); input voltage sweep $0 < V_I$ (Sn) $< V_{DD}$ ; TERM = HIGH		55	80	105	Ω

<sup>[1]</sup> All typical values are at  $V_{DD}$  = 1.8 V,  $T_{amb}$  = 25 °C.

<sup>[2]</sup> Measured by the current between the host and the DIMM terminals at the indicated voltages on each side of the switch.

### 15. Soldering of SMD packages

This text provides a very brief insight into a complex technology. A more in-depth account of soldering ICs can be found in Application Note *AN10365 "Surface mount reflow soldering description"*.

### 15.1 Introduction to soldering

Soldering is one of the most common methods through which packages are attached to Printed Circuit Boards (PCBs), to form electrical circuits. The soldered joint provides both the mechanical and the electrical connection. There is no single soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and Surface Mount Devices (SMDs) are mixed on one printed wiring board; however, it is not suitable for fine pitch SMDs. Reflow soldering is ideal for the small pitches and high densities that come with increased miniaturization.

### 15.2 Wave and reflow soldering

Wave soldering is a joining technology in which the joints are made by solder coming from a standing wave of liquid solder. The wave soldering process is suitable for the following:

- Through-hole components
- Leaded or leadless SMDs, which are glued to the surface of the printed circuit board

Not all SMDs can be wave soldered. Packages with solder balls, and some leadless packages which have solder lands underneath the body, cannot be wave soldered. Also, leaded SMDs with leads having a pitch smaller than ~0.6 mm cannot be wave soldered, due to an increased probability of bridging.

The reflow soldering process involves applying solder paste to a board, followed by component placement and exposure to a temperature profile. Leaded packages, packages with solder balls, and leadless packages are all reflow solderable.

Key characteristics in both wave and reflow soldering are:

- Board specifications, including the board finish, solder masks and vias
- · Package footprints, including solder thieves and orientation
- The moisture sensitivity level of the packages
- Package placement
- Inspection and repair
- Lead-free soldering versus SnPb soldering

### 15.3 Wave soldering

Key characteristics in wave soldering are:

- Process issues, such as application of adhesive and flux, clinching of leads, board transport, the solder wave parameters, and the time during which components are exposed to the wave
- Solder bath specifications, including temperature and impurities

#### 11-bit DDR2 SDRAM MUX/bus switch with 12 $\Omega$ ON resistance

### 15.4 Reflow soldering

Key characteristics in reflow soldering are:

- Lead-free versus SnPb soldering; note that a lead-free reflow process usually leads to higher minimum peak temperatures (see <u>Figure 15</u>) than a SnPb process, thus reducing the process window
- Solder paste printing issues including smearing, release, and adjusting the process window for a mix of large and small components on one board
- Reflow temperature profile; this profile includes preheat, reflow (in which the board is heated to the peak temperature) and cooling down. It is imperative that the peak temperature is high enough for the solder to make reliable solder joints (a solder paste characteristic). In addition, the peak temperature must be low enough that the packages and/or boards are not damaged. The peak temperature of the package depends on package thickness and volume and is classified in accordance with Table 11 and 12

Table 11. SnPb eutectic process (from J-STD-020C)

Package thickness (mm)	Package reflow temperature (°C)				
	Volume (mm <sup>3</sup> )				
	< 350	≥ 350			
< 2.5	235	220			
≥ 2.5	220	220			

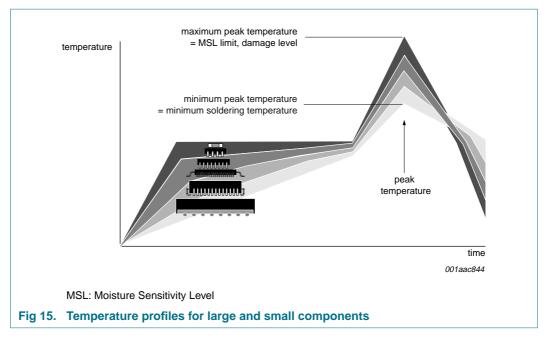

Table 12. Lead-free process (from J-STD-020C)

Package thickness (mm)	Package reflow temperature (°C)			
	Volume (mm³)			
	< 350	350 to 2000	> 2000	
< 1.6	260	260	260	
1.6 to 2.5	260	250	245	
> 2.5	250	245	245	

Moisture sensitivity precautions, as indicated on the packing, must be respected at all times.

Studies have shown that small packages reach higher temperatures during reflow soldering, see Figure 15.

### 18. Legal information

#### 18.1 Data sheet status

Document status[1][2]	Product status[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

- [1] Please consult the most recently issued document before initiating or completing a design
- [2] The term 'short data sheet' is explained in section "Definitions"
- [3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <a href="http://www.nxp.com">http://www.nxp.com</a>.

#### 18.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

### 18.3 Disclaimers

**General** — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in medical, military, aircraft, space or life support equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental

damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

**Applications** — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) may cause permanent damage to the device. Limiting values are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of this document is not implied. Exposure to limiting values for extended periods may affect device reliability.

Terms and conditions of sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <a href="http://www.nxp.com/profile/terms">http://www.nxp.com/profile/terms</a>, including those pertaining to warranty, intellectual property rights infringement and limitation of liability, unless explicitly otherwise agreed to in writing by NXP Semiconductors. In case of any inconsistency or conflict between information in this document and such terms and conditions, the latter will prevail.

**No offer to sell or license** — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

**Export control** — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from national authorities.
