

## Custom and Semi-Custom Vactrols

E G &amp; G VACTEC

T-41-99

Upon request, and where sufficient quantities are involved, EG&G Vactec will test standard parts to your unique set of specifications. The advantage of testing parts under actual operating conditions is guaranteed performance in your application.

Vactec offers a broad line of standard analog optical isolators (Vactrols®) in a wide variety of packages and specifications. Nevertheless, some applications demand a totally custom device. Recognizing this real need, Vactec's engineering, research, and sales departments are geared for working with the customer from initial concept through design, prototype, and volume production.

A custom design usually requires the commitment of valuable resources. Vactec reviews requests for custom devices on a case by case basis and reserves the right to decide when and if the business potential warrants the undertaking of such a project. The customer may be asked to share in the expense of development.

EG&G Vactec has designed and fabricated custom products for many companies. Vactec's staff can work closely with the customer and protect proprietary information.

Inquiries should include electrical, environmental, and mechanical requirements. Also, information on anticipated volumes, price objectives, and lead times is helpful since these often determine the choices of design and tooling.
