

100MHz Current Feedback Video Amplifier with Disable

January 1996

Features

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- Wide Unity Gain Bandwidth 105MHz (Min)
- Slew Rate 800V/ μ s
- Output Current ± 30 mA (Min)
- Drives 3.5V into 75 Ω
- Differential Gain 0.025%
- Differential Phase 0.025 Deg
- Low Input Noise Voltage 4.5nV/ $\sqrt{\text{Hz}}$
- Low Supply Current 10mA (Max)
- Wide Supply Range ± 5 V to ± 15 V
- Output Enable/Disable
- High Performance Replacement for EL2020/883

Applications

- Unity Gain Video/Wideband Buffer
- Video Gain Block
- Video Distribution Amp/Coax Cable Driver
- Flash A/D Driver
- Waveform Generator Output Driver
- Current to Voltage Converter; D/A Output Buffer
- Radar Systems
- Imaging Systems

Description

The HA-5020/883 is a wide bandwidth, high slew rate amplifier optimized for video applications and gains between 1 and 10. Manufactured on Intersil's Reduced Feature Complementary Bipolar DI process, this amplifier uses current mode feedback to maintain higher bandwidth at a given gain than conventional voltage feedback amplifiers. Since it is a closed loop device, the HA-5020/883 offers better gain accuracy and lower distortion than open loop buffers.

The HA-5020/883 features low differential gain and phase and will drive two double terminated 75 Ω coax cables to video levels with low distortion. Adding a gain flatness performance of 0.1dB makes this amplifier ideal for demanding video applications. The bandwidth and slew rate of the HA-5020/883 are relatively independent of closed loop gain. The 105MHz unity gain bandwidth only decreases to 77MHz at a gain of 10. The HA-5020/883 used in place of a conventional op amp will yield a significant improvement in the speed power product. To further reduce power, the HA-5020/883 has a disable function which significantly reduces supply current, while forcing the output to a true high impedance state. This allows the outputs of multiple amplifiers to be wire-OR'd into multiplexer configurations. The device also includes output short circuit protection and output offset voltage adjustment.

The HA-5020/883 offers significant enhancements over competing amplifiers, such as the EL2020. Improvements include unity gain bandwidth, slew rate, video performance, lower supply current, and superior DC specifications.

Ordering Information

PART NUMBER	TEMPERATURE RANGE	PACKAGE
HA7-5020/883	-55 $^{\circ}$ C to +125 $^{\circ}$ C	8 Lead CerDIP
HA4-5020/883	-55 $^{\circ}$ C to +125 $^{\circ}$ C	20 Lead Ceramic LCC

Pinouts

Specifications HA-5020/883

Absolute Maximum Ratings

Voltage Between V+ and V- Terminals	36V
Differential Input Voltage	8V
Voltage at Either Input Terminal	V+ to V-
Peak Output Current	Full Short Circuit Protected
Junction Temperature (T _J)	+175°C
Storage Temperature Range	-65°C to +150°C
ESD Rating	< 2000V
Lead Temperature (Soldering 10s)	+300°C

Thermal Information (Typical)

Thermal Package Characteristics	θ_{JA}	θ_{JC}
CerDIP Package	115°C/W	30°C/W
Ceramic LCC Package	75°C/W	23°C/W
Package Power Dissipation Limit at +75°C for T _J ≤ +175°C		
CerDIP Package	0.87W	
Ceramic LCC Package	1.33W	
Package Power Dissipation Derating Factor Above +75°C		
CerDIP Package	8.7mW/°C	
Ceramic LCC Package	13.3mW/°C	

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

Operating Conditions

Operating Temperature Range	-55°C to +125°C	$V_{INCM} \leq 1/2(V+ - V-)$	$R_F = 1k\Omega$
Operating Supply Voltage	±5V to ±15V	$R_L \geq 400\Omega$	$V_{DISABLE} = V+ \text{ or } 0V$

TABLE 1. DC ELECTRICAL PERFORMANCE CHARACTERISTICS

Device Tested at: Supply Voltage = ±15V, R_{SOURCE} = 0Ω, A_{VCL} = +1, R_F = 1kΩ, R_{LOAD} = 400Ω, V_{OUT} = 0V, V_{DISABLE} = V+, Unless Otherwise Specified.

			2, 3	+125°C, -55°C	-	-25	mV

NOTES:

- Guaranteed from V_{OUT} test by $I_{OUT} = V_{OUT}/400\Omega$.
- This is the minimum current which must be sourced from the $\overline{DISABLE}$ pin, to disable the output. The output is considered disabled when $V_{OUT} \leq 10mV$. Conditions are: $V_{IN} = 10V$, $R_L = 100\Omega$. The test is performed by sourcing $350\mu A$ from the $\overline{DISABLE}$ pin, and testing that the output decreases below the test limit (10mV).
- This is the maximum current that can be sourced from the $\overline{DISABLE}$ pin with the device remaining enabled. The device is considered disabled when the supply current decreases by at least 0.5mA. Conditions are: $R_L = 400\Omega$. Test is performed by sourcing $20\mu A$ from the $\overline{DISABLE}$ pin, and testing that the supply current decreases by no more than the test limit (0.5mA).
- The offset adjustment range is referred to the output. The inverting input current ($-I_{BIAS}$) can be adjusted with an external pot between pins 1 and 5, wiper connected to $V+$. Since $-I_{BIAS}$ flows through R_F , an adjustment of offset voltage results. The amount of offset adjustment is proportional to the value of R_F . Test conditions are: $R_L = Open$, $10k\Omega$ from pin 5 to $V+$, $1k\Omega$ from pin 1 to $V+$, for $+V_{ADJ}$; $R_L = Open$, $1k\Omega$ from pin 5 to $V+$, $10k\Omega$ from pin 1 to $V+$, for $-V_{ADJ}$.

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b1.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling Dimension: Inch.
11. Lead Finish: Type A.
12. Materials: Compliant to MIL-M-38510.

NOTES:

1. Metallized castellations shall be connected to plane 1 terminals and extend toward plane 2 across at least two layers of ceramic or completely across all of the ceramic layers to make electrical connection with the optional plane 2 terminals.
2. Unless otherwise specified, a minimum clearance of 0.015 inch (0.381mm) shall be maintained between all metallized features (e.g., lid, castellations, terminals, thermal pads, etc.)
3. Symbol "N" is the maximum number of terminals. Symbols "ND" and "NE" are the number of terminals along the sides of length "D" and "E", respectively.
4. The required plane 1 terminals and optional plane 2 terminals shall be electrically connected.
5. The corner shape (square, notch, radius, etc.) may vary at the manufacturer's option, from that shown on the drawing.
6. Chip carriers shall be constructed of a minimum of two ceramic layers.
7. Maximum limits allows for 0.007 inch solder thickness on pads.
8. Lead Finish: Type A.
9. Materials: Compliant to MIL-M-38510.

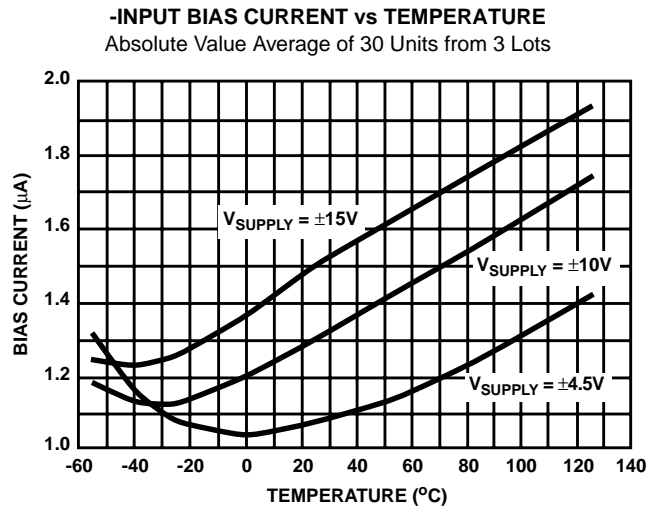

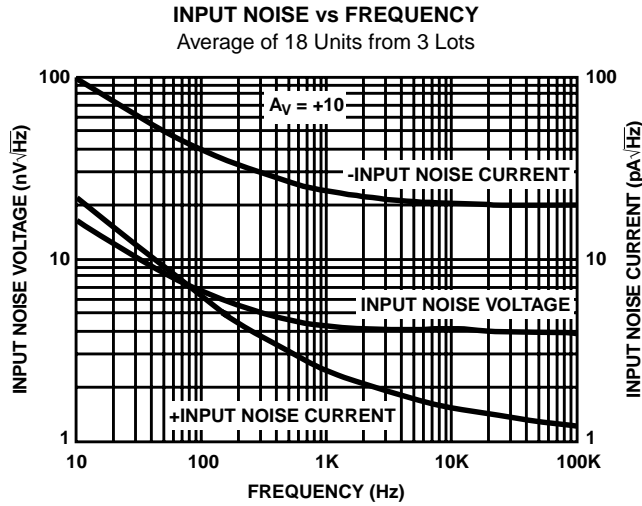

DESIGN INFORMATION

December 1999

100MHz Current Feedback Video Amplifier with Disable

The information contained in this section has been developed through characterization by Harris Semiconductor and is for use as application and design information only. No guarantee is implied.

Typical Performance Curves $V_{SUPPLY} = \pm 15V$, $A_V = +1$, $R_F = 1k\Omega$, $R_L = 400\Omega$, $T_A = +25^\circ C$, Unless Otherwise Specified

DESIGN INFORMATION (Continued)

The information contained in this section has been developed through characterization by Harris Semiconductor and is for use as application and design information only. No guarantee is implied.

Typical Performance Curves $V_{SUPPLY} = \pm 15V$, $A_V = +1$, $R_F = 1k\Omega$, $R_L = 400\Omega$, $T_A = +25^\circ C$, Unless Otherwise Specified

TRANSIMPEDANCE vs TEMPERATURE
Average of 30 Units from 3 Lots

SUPPLY CURRENT vs SUPPLY VOLTAGE
Average of 30 Units from 3 Lots

DISABLE SUPPLY CURRENT vs SUPPLY VOLTAGE
Average of 30 Units from 3 Lots

SUPPLY CURRENT vs DISABLE INPUT VOLTAGE

DISABLE MODE FEEDTHROUGH vs FREQUENCY

DISABLED OUTPUT LEAKAGE vs TEMPERATURE
Average of 30 Units from 3 Lots

DESIGN INFORMATION (Continued)

Typical Performance Curves $V_{SUPPLY} = \pm 15V$, $A_V = +1$, $R_F = 1k\Omega$, $R_L = 400\Omega$, $T_A = +25^\circ C$, Unless Otherwise Specified

ENABLE/DISABLE TIME vs OUTPUT VOLTAGE
Average of 9 Units from 3 Lots

NON-INVERTING GAIN vs FREQUENCY

INVERTING FREQUENCY RESPONSE

PHASE vs FREQUENCY

BANDWIDTH AND GAIN PEAKING vs LOAD RESISTANCE

BANDWIDTH AND GAIN PEAKING vs FEEDBACK RESISTANCE

DESIGN INFORMATION (Continued)

The information contained in this section has been developed through characterization by Harris Semiconductor and is for use as application and design information only. No guarantee is implied.

Typical Performance Curves $V_{SUPPLY} = \pm 15V$, $A_V = +1$, $R_F = 1k\Omega$, $R_L = 400\Omega$, $T_A = +25^\circ C$, Unless Otherwise Specified

BANDWIDTH AND GAIN PEAKING vs FEEDBACK RESISTANCE
($A_V = +2$)

BANDWIDTH vs FEEDBACK RESISTANCE
($A_V = +10$)

REJECTION RATIOS vs TEMPERATURE
Average of 30 Units from 3 Lots

REJECTION RATIOS vs FREQUENCY

OUTPUT SWING OVERHEAD vs TEMPERATURE
Average of 30 Units from 3 Lots

OUTPUT VOLTAGE SWING vs LOAD RESISTANCE

DESIGN INFORMATION (Continued)

The information contained in this section has been developed through characterization by Harris Semiconductor and is for use as application and design information only. No guarantee is implied.

Typical Performance Curves $V_{SUPPLY} = \pm 15V$, $A_V = +1$, $R_F = 1k\Omega$, $R_L = 400\Omega$, $T_A = +25^\circ C$, Unless Otherwise Specified

SHORT CIRCUIT CURRENT LIMIT vs TEMPERATURE

SMALL SIGNAL PULSE RESPONSE

Vertical Scale: $V_{IN} = 100mV/Div.$; $V_{OUT} = 100mV/Div.$
Horizontal Scale: 20ns/Div.

LARGE SIGNAL PULSE RESPONSE

Vertical Scale: $V_{IN} = 5V/Div.$; $V_{OUT} = 5V/Div.$
Horizontal Scale: 50ns/Div.

PROPAGATION DELAY vs TEMPERATURE

Average of 18 Units from 3 Lots

DESIGN INFORMATION (Continued)

The information contained in this section has been developed through characterization by Harris Semiconductor and is for use as application and design information only. No guarantee is implied.

Typical Performance Curves $V_{SUPPLY} = \pm 15V$, $A_V = +1$, $R_F = 1k\Omega$, $R_L = 400\Omega$, $T_A = +25^\circ C$, Unless Otherwise Specified

PROPAGATION DELAY vs SUPPLY VOLTAGE
Average of 18 Units from 3 Lots

SMALL SIGNAL OVERSHOOT vs LOAD RESISTANCE

DISTORTION vs FREQUENCY

DIFFERENTIAL GAIN vs SUPPLY VOLTAGE
Average of 18 Units from 3 Lots

DIFFERENTIAL PHASE vs SUPPLY VOLTAGE
Average of 18 Units from 3 Lots

SLEW RATE vs TEMPERATURE
Average of 30 Units from 3 Lots

HA-5020

TYPICAL PERFORMANCE CHARACTERISTICS

Device Characterized at: Supply Voltage = $\pm 15V$, $R_F = 1k\Omega$, $A_V = +1V/V$, $R_L = 400\Omega$, $C_L \leq 10pF$, $V_{\overline{DISABLE}} = V+$, Unless Otherwise Specified

PARAMETERS	CONDITIONS	TEMPERATURE	TYPICAL	DESIGN LIMIT	UNITS
Input Offset Voltage	$V_{CM} = 0V$	+25°C	2	Table 1	mV
