LXE

The LXE series capacitors are designed for use in low impedance situations at high frequencies. Their primary use would be for switching power supplies. These capacitors have many characteristics that make them ideal for these situations, including a wide temperature range, large capacitance values and long life.

The LXE series capacitors were developed to withstand HCFC cleaning agents for five minutes by ultrasonic, vapor or immersion. This solvent proof design allows all circuit board components to be cleaned together, at the same time, without resorting to more expensive epoxy end-sealed capacitors. Refer to the Mini-Glossary for recommended cleaning conditions.
