

50 W Power Resistor, Thick Film Technology, TO-220

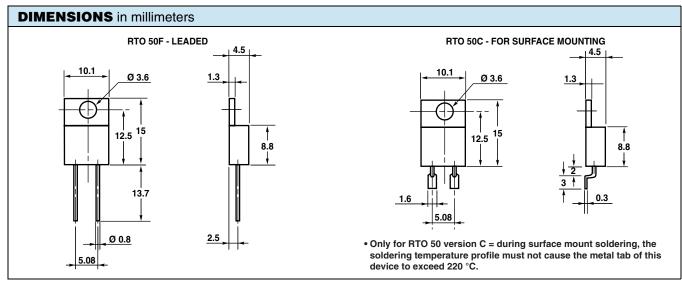

FEATURE

- 50 W at 25 °C heatsink mounted
- Adjusted by sand trimming
- Leaded or surface mount versions
- High power to size ratio
- Non inductive element
- Compliant to RoHS directive 2002/95/EC

RoHS COMPLIANT

Because of the knowledge and experience in Thick Film technology, Vishay Sfernice has been able to develop a high power resistor in a TO-220 package called RTO 50. The special design of this component allows the dissipation of 50 W when mounted on a heatsink. The ohmic value is adjusted by sand trimming. This process does not generate hot spots as in laser trimming, which could lead to microcracks on each side of the curve. This process improves the reliability and the stability of the resistor and at the same time gives a good overload capability.

MECHANICAL SPECIFICATIONS

Mechanical ProtectionMoldedResistive ElementThick film

Connections Tinned copper alloy

Weight 2.2 g max.

DIMENSIONS

Standard Package TO-220

Insulated case

ENVIRONMENTAL SPECIFICATIONS

Temperature Range - 55 °C to + 155 °C Climatic Category 55/155/156 Sealed container Solder immersion

IEC 60695-11-5

2 applications 30 s seperated by 60 s

Note

Flammability

• Not compatible with RoHS reflow profile

ELECTRICAL SPECIFICATIONS					
Resistance Range	$0.010~\Omega$ to 550 k Ω serie E24				
Tolerances Standard	± 1 % to ± 10 %				
Dissipation and Associated	Onto a heatsink				
	50 W at + 25 °C				
Thermal Resistance	R _{TH (j - c)} : 2.6 °C/W				
and Nominal Power	free air:				
	2.25 W at + 25 °C				
Temperature Coefficient	See Performance table				
Standard (- 55 °C; + 150 °C)	± 150 ppm/°C				
Limiting Element Voltage U _L	300 V				
Dielectric Strength	2000 V _{RMS} - 1 min				
MIL STD 202 (301)	10 mA max.				
Insulation Resistance	$\geq 10^6 \text{M}\Omega$				
Inductance	≤ 0.1 μH				
Critical Resistance	1.8 kΩ

CHOICE OF THE HEATSINK

The user must choose according to the working conditions of the component (power, room temperature).

Maximum working temperature must not exceed 155 °C. The dissipated power is simply calculated by the following ratio:

$$P \, = \, \frac{\Delta T}{[\, R_{TH \, (j \, - \, c)} + R_{TH \, (c \, - \, a)}]}^{\, (1)} \label{eq:P}$$

P: Expressed in W

ΔΤ: Difference between maximum working temperature and room temperature

Thermal resistance value measured between resistive layer and outer side of the resistor. It is the thermal R_{TH (j - c)}:

resistance of the component: (Special Features Table)

Thermal resistance value measured between outer side of the resistor and room temperature. It is the R_{TH (c - a)}:

thermal resistance of the heatsink itself (type, shape) and the quality of the fastening device

Example:

 $R_{TH\ (c-a)}$: For RTO 50 power rating 13 W at ambient temperature + 30 °C

Thermal resistance R_{TH (j - c)}: 26 °C/W

Considering equation (1) we have:

$$\Delta T \le 155~^{\circ}C$$
 - 30 $^{\circ}C \le 125~^{\circ}C$

$$\begin{split} R_{TH\;(j\;-\;c)} + R_{TH\;(c\;-\;a)} &= \frac{\Delta T}{P} = \frac{125}{13} = 9.6\;^{\circ}\text{C/W} \\ R_{TH\;(c\;-\;a)} &\leq 9\;.6\;^{\circ}\text{C/W} - 2.6\;^{\circ}\text{C/W} \leq 7\;^{\circ}\text{C/W} \end{split}$$

$$R_{TH (c-a)} \le 9.6 \text{ °C/W} - 2.6 \text{ °C/W} \le 7 \text{ °C/W}$$

50 W Power Resistor, Thick Film Technology, TO-220 Vishay Sfernice

OVERLOADS

The applied voltage must always be lower than the maximum overload voltage of $450\ V$.

The values indicated on the graph below are applicable to resistors in air or mounted onto a heatsink.

ENERGY CURVE

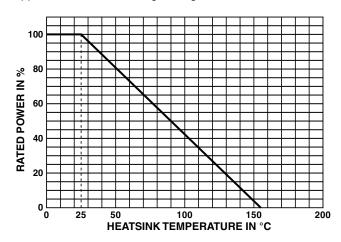

MARKING

Model, style, resistance value (in Ω), tolerance (in %), manufacturing date, Vishay Sfernice trademark.

POWER RATING

The temperature of the heatsink should be maintained within the limits specified.

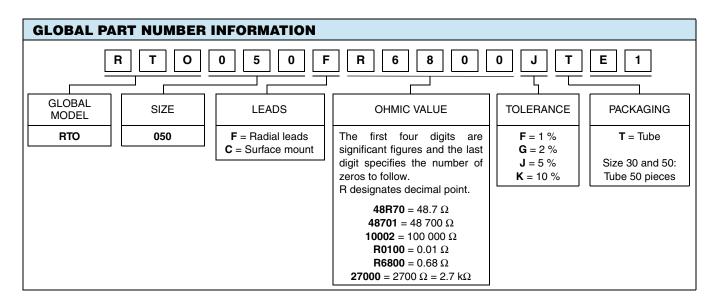

To improve the thermal conductivity, surfaces in contact should be coated with a silicone grease and the torque applied on the screw for tightening should be around 1 Nm.

PACKAGING

Tube of 50 units
