

Type AFK, -55°C to 105°C

SMT Aluminum Electrolytic Capacitors - Lowest E.S.R., 105°C

Lowest ESR and Long Life for Filtering, Bypassing, Power Supply Decoupling

Type AFK Capacitors are the best and by a wide margin. With 40% to 60% lower impedance, 30% to 50% smaller case size and more than twice the life compared to low-ESR type AFC, the Type AFK also excels at cold performance down to -55°C. In addition, this terrific, low-impedance performance approaching low-ESR tantalum capacitors is at a significant cost savings compared to tantalum. The vertical cylindrical cases facilitate automatic mounting and reflow soldering into the same footprint of like-rated tantalum capacitors except without the need for voltage derating.

Highlights

- ◆ +105°C, Up to 5000 Hour Load Life
- ◆ Capacitance Range: 3.3 µF to 6800 µF
- ◆ Voltage Range: 6.3 Vdc to 100 Vdc

Specifications

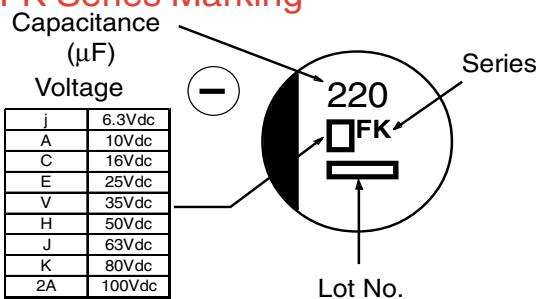

Operating Temperature:	-55°C to +105°C								
Rated Voltage:	6.3, 10, 16, 25, 35, 50, 63, 80 & 100 Vdc								
Capacitance:	3.3 µF to 6800 µF								
Capacitance Tolerance:	±20% @ 120 Hz and +20°C								
Leakage Current:	0.01 CV or 3 µA @ +20°C, after two minutes (whichever is greater)								
Ripple Current Multiplier:	Frequency								
Dissipation Factor:	50/60 Hz	120 Hz	1 kHz	10 kHz	100 kHz				
	0.7	0.75	0.9	0.95	1.0				
	6.3 V	10 V	16 V	25 V	35 V	50 V	63 V	80 V	100 V
	0.26	0.19	0.16	0.14	0.12	0.1	0.08	0.08	0.07

Add 0.02 per 1000 µF for values greater than 1000 µF

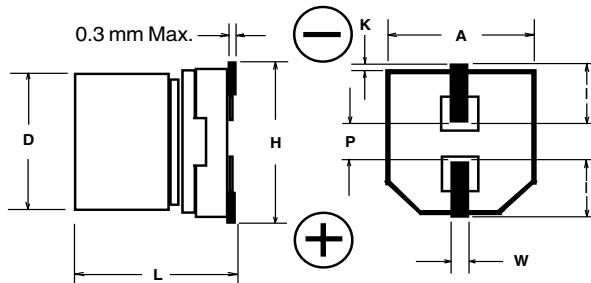

Life Test: 2000 h @ +105°C, 4.0 - 10.0 mm dia.
5000 h @ +105°C, 12.5 - 18.0 mm dia.
△ Capacitance ±30%
DF: ≤200% of limit
DCL: ≤100% of limit

Shelf Life: 1000 h @ +105°C
△ Capacitance ±30%
DF: ≤200% of limit
DCL: ≤100% of limit

AFK Series Marking

V-Chip Cleaning and Coating Guide

Cleaning

Below is a table describing the usable solvents for cleaning a PC board containing V-Chips.

Table 1

Solvent type	Name	Manufacturer	Recommended use level	Symtoms of Damage								
Water Base												
Water	Distilled Water		1	None								
Alkaline	Aqua Cleaner 210SEP	Sanei	2	None, though marking ink may fade								
Surface active agent	Pine Alpha ST-100S	Aralawa Kasei Kogyo	2									
	Clean-thru 750H	Kao Corporation	2									
	Clean-thru 750L		2									
	Clean-thru 710M		2									
	Sun-elec B-12	Sanyo Kasei	2									
	DK be-clean CW-5790	Dai-Ichi Kogyo Seiyaku	2									
Solvent Base												
Petroleum based	Cold-cleaner P3-375	Henkel Hakusui	3	swelling on sealing rubber rinse and dry well after cleaning								
	Techno-cleaner 219	Seiwa Sangyo	3									
hydrocarbon	Axarel 32	Mitsui DFC	3									
Alcohol base	Isopropyl Alcohol		1	None								
Silicon base	Techno-care FRW-17	Toshiba Corporation	3	None if used in combination								
	Techno-care FRW-17		3									
	(Techno-care FRV-100)		3									
Halogenated hydrocarbon	Asashi-clean AK-225AES	Ashahi Glass	3	Contains CFC's subject to environmental regulations								
	HCFC141B-MS	Dalkin Kogyo	3									
Telpen base	Telpen-cleaner EC-7R	Nippon Alpha Metals	3	swelled seal								
<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center; padding: 2px;">Use level Number</th> <th style="text-align: center; padding: 2px;">Recommendation</th> </tr> </thead> <tbody> <tr> <td style="text-align: center; padding: 2px;">1</td> <td style="text-align: center; padding: 2px;">Cleaning is possible</td> </tr> <tr> <td style="text-align: center; padding: 2px;">2</td> <td style="text-align: center; padding: 2px;">Cleaning is possible (markings may fade)</td> </tr> <tr> <td style="text-align: center; padding: 2px;">3</td> <td style="text-align: center; padding: 2px;">Cleaning is possible (Use caution. 1 and 2 are better choices)</td> </tr> </tbody> </table>					Use level Number	Recommendation	1	Cleaning is possible	2	Cleaning is possible (markings may fade)	3	Cleaning is possible (Use caution. 1 and 2 are better choices)
Use level Number	Recommendation											
1	Cleaning is possible											
2	Cleaning is possible (markings may fade)											
3	Cleaning is possible (Use caution. 1 and 2 are better choices)											

V-Chips may be immersed for 5 minutes, safely, in Level 1&2 solvents. Use Level 3 solvents with caution.

Do not use chlorine-based halogenated cleaning solvents, adhesives or coating agents.

When halogenated chlorine-based solvents are used in the cleaning process, free chlorine is liberated from the solvent. This chlorine causes corrosion and deterioration of the aluminum inside the capacitor

Dangers of "Free-Chlorine":

After the solvent dries, the chlorine remains on the capacitor seal, the chlorine slowly permeates into the capacitor element causing corrosion and damage that happens slowly. It may take some time before a failure is apparent. A representation of the chemical reaction is on the following page.

V-Chip Cleaning and Coating Guide

Free-chlorine Diagram:

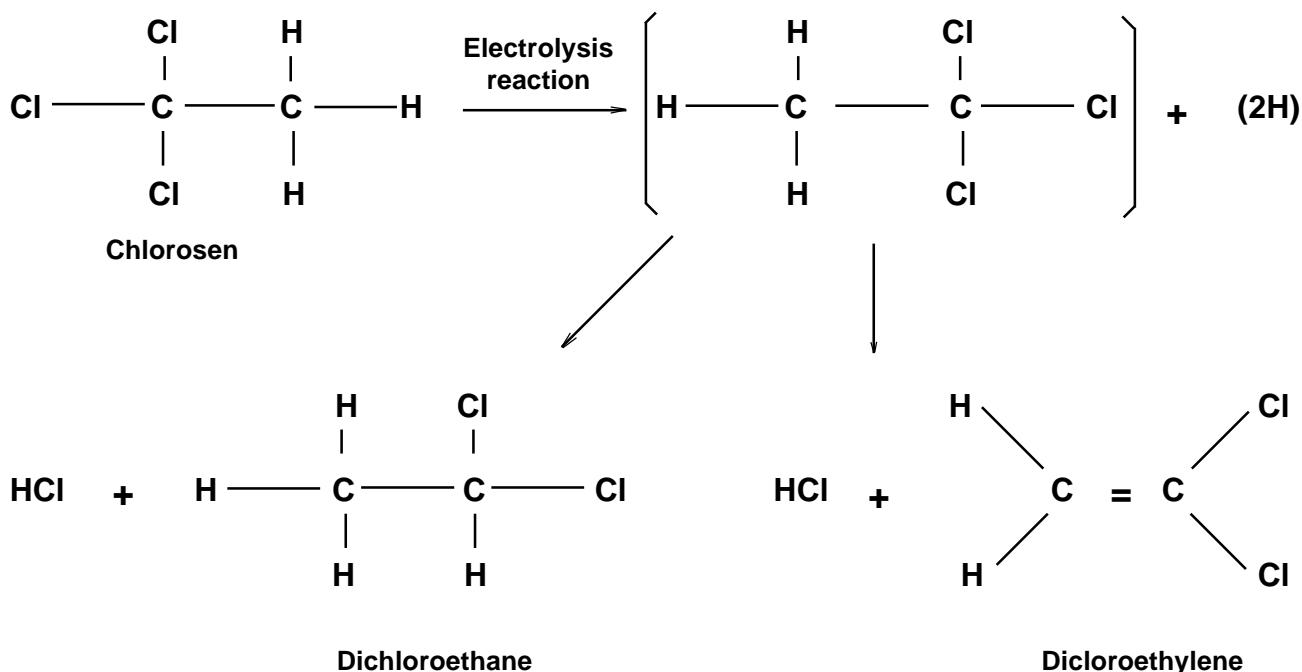

Fig. 1 Decomposed reaction of cleaning solvents (Free-chlorine)

Reaction of Free-chlorine and Aluminum

Combined free chlorine and hydrogen become hydrochloric acid, but it has high dissociation and most of it becomes chlorine ions. These chlorine ions react with the aluminum. The order of the reactions is represented below.

1.) Hydration of oxide film

2.) Reaction of hydrated oxide film and chlorine (Dissolution of film)

3.) Reaction of aluminum and hydrochloric acid (Dissolution of aluminum)

4.) Precipitation of aluminum hydroxide

The entire reaction can be summarized as the following:

Therefore the compounds produced by the reactions are aluminum hydroxide and hydrochloric acid from reaction #4; the hydrochloric acid is not consumed and acts as a catalyst.

V-Chip Cleaning and Coating Guide

Solvents that should not be used

Table 2

Composition	Boiling Point (°C)	Common Name
1.1.1-Trichloroethane	74.1	Chlorosen
Trichloroethylene	87.2	Trichlene
Tetrachloroethylene	121.1	Perchloroethylene

Additional Cleaning Notes:

- 1.) Solvents containing CFC's destroy the ozone layer and should be avoided to protect the global environment.
- 2.) To avoid solvent residue between the capacitor's seal and the PC board, make sure the assembly is dried thoroughly immediately after cleaning.

Coating

Below is a list of coatings that are safe for use with V-Chips

Table 3

Manufacturer	Material	Coating Material Name
Hitachi Chemical	Acrylic	Taffi-1141, Taffi-1147
	Urethane	Taffi-1154
Boxy Brown	Acrylic	Humi Seal 1B66
	Urethane	Humi Seal 1A27
Dow Corning	Silicon	Perugan Z, Perugan C
Nihon Zeon	Urethane	Quinate System 160B

Influence of Coating Materials

Coating materials are typically used for insulation, waterproofing, dustproofing and rustproofing. When coating materials are selected there are factors to prevent internal corrosion (chlorine reaction with aluminum) while the capacitor is functioning. The following steps will help prevent this damage to the capacitor.

A.) Corrosion Reaction

Avoid halogen solvents which permeate the capacitor's seal, releasing chlorine which reacts with the aluminum inside the capacitor.

B.) Selecting a Coating Material

It is necessary to select a coating material that contains no chlorine.

The coating consists of the main ingredient which could be urethane resin, acrylic resin or other polymer, a solvent and other additives such as flameproofing agents.

V-Chip Cleaning and Coating Guide

The coating's solvent dries and diffuses into the rubber seal of the capacitor, therefore halogenated hydrocarbon solvents containing chloride should not be used.

Similar to the solvent, additives can permeate into the capacitor through the rubber seal. Ingredients in many additives might not be listed, therefore use caution when choosing an additive.

C.) Other Concerns

Solvents and additives are subject to change without notice. Make sure ingredients are identified.

Avoid coating a substrate after cleaning it with a halogenated hydrocarbon. The coating will prevent the remaining solvent from diffusing which may cause corrosion.
