

Features:

- Universal AC input / Full range
- Built-in 5V/0.3A, 12V/0.8A auxiliary power
- Built-in active PFC function, PF>0.98
- High efficiency up to 92%
- Withstand 300VAC surge input for 5 seconds
- Protections: Short circuit / Overload / Over voltage / Over temperature
- High Power density 21.4W/inch³
- Forced air cooling by built-in DC fan with fan speed control
- Low profile:1U height
- · Remote control for single unit
- · Built-in remote sense function
- · Output voltage trimming function
- Hot-swap operation
- PMBus serial communication
- AC OK, DC OK signal, fan fail, OTP alarm signal
- Internal OR-ing FET
- · 3 years warranty

Description :

The RCP-2000 series are state of the art AC/DC frond-end rectifiers with 1U compact size and 21.4 W/in³ of high power density. They can provide up to 2000W per unit for the applications of servers, information technology equipment, networking, telecommunications, and wide range of industrial applications using distributed power architecture. Equipped with hot-swap function and PMBus communication protocol, RCP-2000 can be assembled in 1U 19" rack and controlled/monitored by external device such as monitoring unit (RCP-CMU-1) or PC.

SPECIFICATION - Single Unit

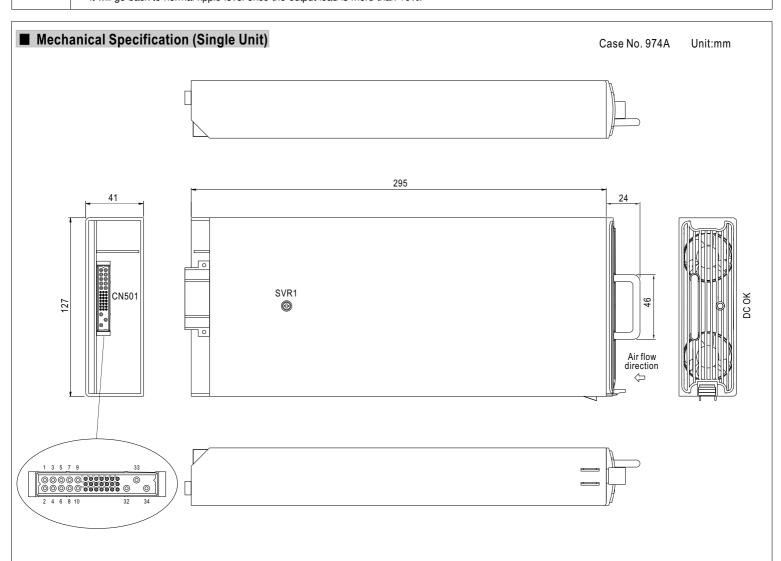

MODEL		RCP-2000-12	P-2000-12 RCP-2000-24						
	DC VOLTAGE	12V	24V	48V					
	RATED CURRENT	100A	80A	42A					
	CURRENT RANGE	0 ~ 100A	0 ~ 80A	0 ~ 42A					
	RATED POWER	1200W	1920W	2016W					
	RIPPLE & NOISE (max.) Note.2	150mVp-p	200mVp-p	300mVp-p					
OUTPUT	VOLTAGE ADJ. RANGE	10.5 ~ 14V	21 ~ 28V	42 ~ 56V					
	VOLTAGE TOLERANCE Note.3	±2.0%	±1.0%	±1.0%					
	LINE REGULATION	±1.0%	±0.5%	±0.5%					
	LOAD REGULATION	±1.0%	±0.5%	±0.5%					
	SETUP, RISE TIME	1500ms, 60ms/230VAC at full load							
	HOLD UP TIME (Typ.)	16ms/230VAC at 75% load 10ms/230V	VAC at full load						
	VOLTAGE RANGE Note.5	90 ~ 264VAC 127 ~ 370VDC							
	FREQUENCY RANGE	47 ~ 63Hz							
	POWER FACTOR (Typ.)	0.98/230VAC at full load							
INPUT	EFFICIENCY (Typ.)	86%	90.5%	92%					
	AC CURRENT (Typ.)	13A/115VAC 7A/230VAC	16A/115VAC 10A/230VAC	16A/115VAC 10A/230VAC					
	INRUSH CURRENT (Typ.)	COLD START 50A							
	LEAKAGE CURRENT	<1.1mA / 230VAC							
	OVERLOAD	105 ~ 125% rated output power							
		Protection type : Constant current limiting,	unit will shut down o/p voltage after 5 sec. re	-power on to recover					
	OVED VOLTA OF	14.7 ~ 17.5V 29.5 ~ 35V 57.6 ~ 67.2V							
PROTECTION	OVER VOLTAGE	Protection type : Shut down o/p voltage, re-power on to recover							
	OVED TEMPEDATURE	80° C $\pm 5^{\circ}$ C (TSW1) detect on heatsink of power bridge 85° C $\pm 5^{\circ}$ C (TSW2) detect on heatsink of o/p diode							
	OVER TEMPERATURE	Protection type : Shut down o/p voltage, recovers automatically after temperature goes down							
	AUXILIARY POWER	5V @ 0.3A, 12V @ 0.8A							
	REMOTE ON/OFF CONTROL	By electrical signal or dry contact ON:short OFF:open							
	REMOTE SENSE	Compensate voltage drop on the load wiring up to 0.5V							
FUNCTION	DC OK SIGNAL	The isolated TTL signal out, refer to function manual							
FUNCTION	AC OK SIGNAL	The isolated TTL signal out, refer to function manual							
	OUTPUT VOLTAGE TRIM	Adjustment of output voltage, possible between 90 ~ 110% of rated output							
	OVER TEMP WARNING	Logic " High" for over temperature warning, refer to function manual, isolated signal							
	FAN FAIL SIGNAL	The isolated TTL signal out, refer to function manual							
	WORKING TEMP.	-40 ~ +70°C (Refer to "Derating Curve")							
	WORKING HUMIDITY	20 ~ 90% RH non-condensing							
ENVIRONMENT	STORAGE TEMP., HUMIDITY	-40 ~ +85°C, 10 ~ 95% RH							
	TEMP. COEFFICIENT	±0.03%/°C (0 ~ 50°C)							
	VIBRATION	10 ~ 500Hz, 2G 10min./1cycle, 60min. each	h along X, Y, Z axes						
				File Name: PCP_2000_SPEC_2011_05_00					

2000W Front End Power Supply

MODEL		RCP-2000-12	RCP-2000-24	RCP-2000-48						
	SAFETY STANDARDS	UL60950-1, TUV EN60950-1 approved	JL60950-1, TUV EN60950-1 approved							
SAFETY &	WITHSTAND VOLTAGE	I/P-O/P:3KVAC I/P-FG:1.5KVAC O/P-	P-O/P:3KVAC I/P-FG:1.5KVAC O/P-FG:0.7KVDC							
EMC	ISOLATION RESISTANCE	P-O/P, I/P-FG, O/P-FG:100M Ohms / 500VDC / 25°C / 70% RH								
(Note 4)	EMC EMISSION	Compliance to EN55022 (CISPR22) Conduction Class B, Radiation Class A; EN61000-3-2,-3								
	EMC IMMUNITY	Compliance to EN61000-4-2,3,4,5,6,8,11, EN61000-6-2 (EN50082-2), heavy industry level, criteria A								
	MTBF	60.1Khrs min. MIL-HDBK-217F (25°ℂ)								
OTHERS	DIMENSION	295*127*41mm (L*W*H)								
	PACKING	2Kg;6pcs/13Kg/1.04CUFT								
	1 All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature									

NOTE

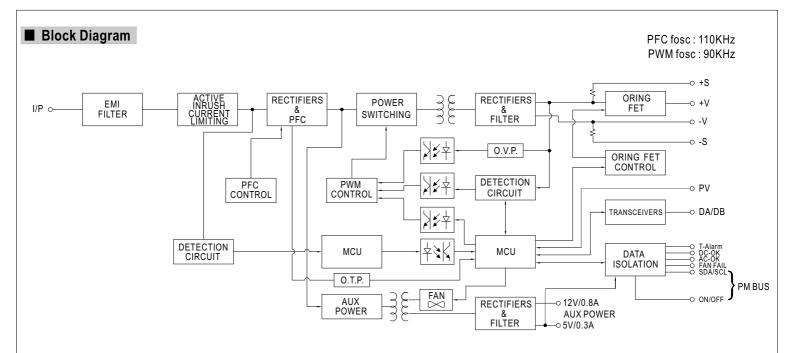

- 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
- 3. Tolerance: includes set up tolerance, line regulation and load regulation.
- 4. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives.
- 5. Derating may be needed under low input voltages. Please check the static characteristics for more details.
- 6. Output of all the RCP-2000 modules are connected in parallel in the rack.
- 7. Under parallel operation of more than one rack connecting together, ripple of the output voltage may be higher than the SPEC at light load condition. It will go back to normal ripple level once the output load is more than 10%.

Input / Output Connector Pin No. Assignment(CN501): Postronic PCIM34W13M400A1

■ Function Description of CN501

twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 15 Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 16,18,19, A0,A1,A2, A3,A4 PMBus interface address lines. (Note.1) 17 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) 22 NC Not use. 23 SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 17-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 GND-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). 32 FG AC Ground connection.	Pin No.	Function	Description
9 -V -V Signal 10 +V +V Signal 11 PV Connection for output voltage trimming. The voltage can be trimmed within its defined range. (Note.1) 12,13 DA,DB Differential digital signal for parallel control. (Note.1) 14 +S Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. Regative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. Robustical Standard	1,2,3,4	+V	Positive output voltage
10 +V +V Signal 11 PV Connection for output voltage trimming. The voltage can be trimmed within its defined range. (Note.1) 12,13 DA,DB Differential digital signal for parallel control. (Note.1) 14 +S Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. Negative sensing. The +S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 16,18,19, A0,A1,A2, A3,A4 PMBus interface address lines. (Note.1) 17 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) 22 NC Not use. 23 SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 +12V-AUX Auxiliary voltage output, 1.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output, 1.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control.	5,6,7,8	-V	Negative output voltage.
11 PV Connection for output voltage trimming. The voltage can be trimmed within its defined range. (Note.1) 12,13 DA,DB Differential digital signal for parallel control. (Note.1) 14 +S Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 15 -S Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 16,18,19, 20,21 A3,A4 PMBus interface address lines. (Note.1) 70 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) NC Not use. SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 7 T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 45V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 H12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output in the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).	9	-V	-V Signal
12,13 DA,DB Differential digital signal for parallel control. (Note.1) 14 +S Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 15 -S Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 16,18,19, 20,21 A3,A4 PMBus interface address lines. (Note.1) 17 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) 18 NC Not use. 29 SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 27 T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 H12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control.	10	+V	+V Signal
+S Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 15 -S Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 16,18,19, 20,21 A3,A4 PMBus interface address lines. (Note.1) 17 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) 18 Not use. 29 SDA Serial Data used in the PMBus interface. (Note.2) 20 SCL Serial Clock used in the PMBus interface. (Note.2) 21 SCL Serial Clock used in the PMBus interface. (Note.2) 22 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 29 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 10 T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 +12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).	11	PV	Connection for output voltage trimming. The voltage can be trimmed within its defined range. (Note.1)
twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 15 S Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 16,18,19, A0,A1,A2, A3,A4 PMBus interface address lines. (Note.1) 17 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) 28 NC Not use. 29 SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 27 T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 412V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).	12,13	DA,DB	Differential digital signal for parallel control. (Note.1)
twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V. 16,18,19, 20,21 A3,A4 PMBus interface address lines. (Note.1) 17 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) 22 NC Not use. 23 SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 27 T-ALARM Low: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 +12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). 32 FG AC Ground connection.	14	+S	Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.
20,21 A3,A4 PMBus interface address lines. (Note.1) 17 ON/OFF The unit can turn the output on and off by electrical signal or dry contact. (Note.2) 22 NC Not use. 23 SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 27 T-ALARM Cow: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 +12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). 32 FG AC Ground connection.	15	-S	Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.
22 NC Not use. 23 SDA Serial Data used in the PMBus interface. (Note.2) 24 SCL Serial Clock used in the PMBus interface. (Note.2) 25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 27 T-ALARM Low: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 +12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output has the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). 32 FG AC Ground connection.			PMBus interface address lines. (Note.1)
SDA Serial Data used in the PMBus interface. (Note.2) SCL Serial Clock used in the PMBus interface. (Note.2) AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) T-ALARM Low: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) #5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. #12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).	17	ON/OFF	The unit can turn the output on and off by electrical signal or dry contact. (Note.2)
SCL Serial Clock used in the PMBus interface. (Note.2) AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 45V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).	22	NC	Not use.
25 AC-OK Low: When the input voltage is ≥87Vrms. High: when the input voltage in ≤75Vrms. (Note.2) 26 DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) 27 T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) 28 FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 +12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). 32 FG AC Ground connection.	23	SDA	Serial Data used in the PMBus interface. (Note.2)
DC-OK High: When the Vout ≤80%±5%. Low: When Vout ≥80%±5%. (Note.2) T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 45V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output is the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). FG AC Ground connection.	24	SCL	Serial Clock used in the PMBus interface. (Note.2)
T-ALARM High: When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm. Low: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) FAN-FAIL High: When the internal fan fail. Low: When the internal fan is normal. (Note.2) 45V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 412V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output has the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). FG AC Ground connection.	25	AC-OK	Low : When the input voltage is \ge 87Vrms. High : when the input voltage in \le 75Vrms . (Note.2)
28 FAN-FAIL High: When the internal temperature (TSW1 or TSW2 short) under the limit temperature. (Note.2) 29 +5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 30 +12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output has the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 31 GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). 32 FG AC Ground connection.	26	DC-OK	High : When the Vout \leq 80%±5%. Low : When Vout \geq 80%±5%. (Note.2)
+5V-AUX Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has built-in "Oring diodes" and is not controlled by the remote ON/OFF control. +12V-AUX Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). FG AC Ground connection.	27	T-ALARM	
built-in "Oring diodes" and is not controlled by the remote ON/OFF control. 10	28	FAN-FAIL	High : When the internal fan fail. Low : When the internal fan is normal. (Note.2)
the built-in "Oring diodes" and is not controlled by the remote ON/OFF control. GND-AUX Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V). AC Ground connection.	29	+5V-AUX	Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 31). The maximum load current is 0.3A. This output has the built-in "Oring diodes" and is not controlled by the remote ON/OFF control.
32 FG AC Ground connection.	30	+12V-AUX	Auxiliary voltage output, 10.8~13.2V, referenced to GND-AUX (pin 31). The maximum load current is 0.8A. This output has the built-in "Oring diodes" and is not controlled by the remote ON/OFF control.
	31	GND-AUX	Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).
00 00 00 00 00 00 00 00 00 00 00 00 00	32	FG	AC Ground connection.
33 AC/L AC Line connection.	33	AC/L	AC Line connection.
34 AC/N AC Neutral connection.	34	AC/N	AC Neutral connection.

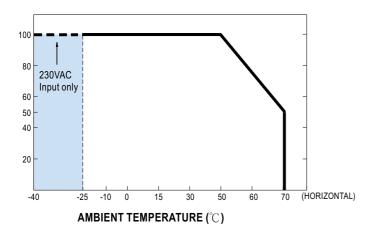

Note1: Non-isolated signal, referenced to the output terminals (-V).

Note2: Isolated signal, referenced to GND-AUX.

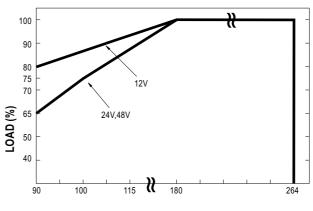

■ Derating Curve

(%) **GVO**

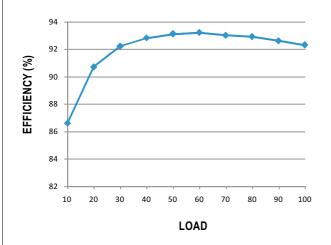

■ Static Characteristics

INPUT VOLTAGE (VAC) 60Hz

■ EFFICIENCY vs LOAD (48V Model)

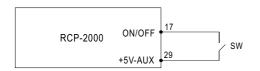

■ DERATING LOAD(%) VS INPUT VOLTAGE

INPUT/VOLTAGE MODEL	>180VAC	115VAC	100VAC	90VAC
RCP-2000-12	100%	95%	90%	80%
RCP-2000-24	100%	80%	75%	65%
RCP-2000-48	100%	80%	75%	65%

■ Function Manual

1. Remote ON/OFF Control

The PSU can be turned ON/OFF together or separately by using the "Remote ON/OFF" function.

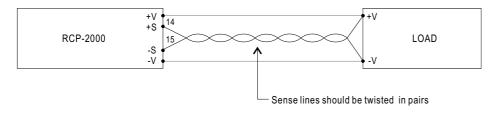

Between ON/OFF and +5V-AUX	Output		
SW Open	OFF		
SW Short	ON		

2. Voltage Drop Compensation

2.1 Remote Sense

The remote sense compensates voltage drop on the load wiring up to 0.5V.

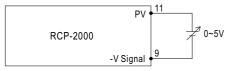

2.2 Local Sense

Notice: The +S,-S have to be connected to the +V,-V terminals locally in order to get the correct output voltage if the remote sensing is not used.

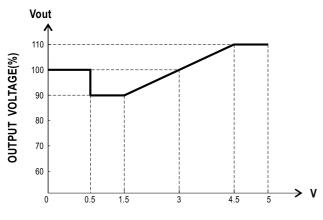

3. Output Voltage Trimming

Output voltage can be trimmed between 90~110% of its rated value by the following method.

Add on 0~5V external voltage

EXTERNAL VOLTAGE (DC)

4. Front Panel Indicators & Corresponding Signal at Function Pins

Function	LED	Description	* Signal	PSU Output
AC-OK	GREEN	When input voltage ≥ 87V	0 ~ 0.5V	ON
AC-NG	RED	When input voltage $\leq 75V$	4.5 ~ 5.5V	OFF
DC-OK	GREEN	When output voltage $\geq 80\% \pm 5\%$ of Vo rated.	0 ~ 0.5V	ON
DC-NG	RED	When output voltage $\leq 80\% \pm 5\%$ of Vo rated.	4.5 ~ 5.5V	ON
T-OK	GREEN	When the internal temperature (TSW1 & TSW2 short) is within safe limit	0 ~ 0.5V	ON
T-ALARM	RED	When the internal temperature (TSW1 or TSW2 open) exceeds the limit of temperature alarm	4.5 ~ 5.5V	OFF

^{*}Signal between function pin and "GND-AUX".
