

Board 4s SKYPER 32 R

SKYPER®

Adaptor board

Board 4s SKYPER 32 R

Preliminary Data

Features

- Two output channels
- Failure management

Typical Applications*

- Adaptor board for SKYPER 32 IGBT drivers in bridge circuits for industrial applications
- DC bus up to 1200V

Footnotes

All characteristics listed in the data sheet are guilty for the use with SKYPER 32. Please consider the derating of the ambient temperature. Please refer to the datasheet of SKYPER 32 for further information.

Absolute Maximum Ratings			
Symbol	Conditions	Values	Unit
V_s	Supply voltage primary	16	V
$I_{outPEAK}$	Output peak current	15	A
$I_{outAVmax}$	Output average current	50	mA
f_{max}	max. switching frequency	50	kHz
V_{CE}	Collector emitter voltage sense across the IGBT	1700	V
V_{isolIO}	Isolation test voltage input - output (AC, rms, 2s)	4000	V
V_{isolPD}	Partial discharge extinction voltage, rms, $Q_{PD} \leq 10pC$	1500	V
V_{isol12}	Isolation test voltage output 1 - output 2 (AC, rms, 2s)	1500	V
$R_{Gon\ min}$		1.5	Ω
$R_{Goff\ min}$	Minimum rating for external R_{Goff}	1.5	Ω
T_{op}	Operating temperature	-25 ... 85	$^{\circ}C$
T_{stg}	Storage temperature	-25 ... 85	$^{\circ}C$

Characteristics					
Symbol	Conditions	min.	typ.	max.	Unit
V_s	Supply voltage primary side	14.4	15	15.6	V
V_j	input signal voltage on / off		15 / 0		V
V_{IT+}	Input threshold voltage HIGH			12.3	V
V_{IT-}	Input threshold voltage (LOW)	4.6			V
$V_{G(on)}$	Turn on gate voltage output		15		V
$V_{G(off)}$	Turn off gate voltage output		-7		V
$t_{d(on)IO}$	Input-output turn-on propagation time		1.1		μs
$t_{d(off)IO}$	Input-output turn-off propagation time		1.1		μs

Derating

This is an electrostatic discharge sensitive device (ESDS), international standard IEC 60747-1, Chapter IX

* The specifications of our components may not be considered as an assurance of component characteristics. Components have to be tested for the respective application. Adjustments may be necessary. The use of SEMIKRON products in life support appliances and systems is subject to prior specification and written approval by SEMIKRON. We therefore strongly recommend prior consultation of our personal.

Please note:

All values in this technical explanation are typical values. Typical values are the average values expected in large quantities and are provided for information purposes only. These values can and do vary in different applications. All operating parameters should be validated by user's technical experts for each application.

Application and Handling Instructions

- Please provide for static discharge protection during handling. As long as the hybrid driver is not completely assembled, the input terminals have to be short-circuited. Persons working with devices have to wear a grounded bracelet. Any synthetic floor coverings must not be statically chargeable. Even during transportation the input terminals have to be short-circuited using, for example, conductive rubber. Worktables have to be grounded. The same safety requirements apply to MOSFET- and IGBT-modules.
- Any parasitic inductances within the DC-link have to be minimised. Over-voltages may be absorbed by C- or RCD-snubber networks between main terminals for PLUS and MINUS of the power module.
- When first operating a newly developed circuit, SEMIKRON recommends to apply low collector voltage and load current in the beginning and to increase these values gradually, observing the turn-off behaviour of the free-wheeling diode and the turn-off voltage spikes generated across the IGBT. An oscillographic control will be necessary. Additionally, the case temperature of the module has to be monitored. When the circuit works correctly under rated operation conditions, short-circuit testing may be done, starting again with low collector voltage.
- It is important to feed any errors back to the control circuit and to switch off the device immediately in failure events. Repeated turn-on of the IGBT into a short circuit with a high frequency may destroy the device.
- The inputs of the hybrid driver are sensitive to over-voltage. Voltages higher than $V_S +0,3V$ or below $-0,3V$ may destroy these inputs. Therefore, control signal over-voltages exceeding the above values have to be avoided.
- The connecting leads between hybrid driver and the power module should be as short as possible (max. 20cm), the driver leads should be twisted.

Further application support

Latest information is available at <http://www.semikron.com>. For design support please read the SEMIKRON Application Manual Power Modules available at <http://www.semikron.com>.

General Description

The Board 4s SKYPER[®] 32 R is an adaptor board for the IGBT module SEMiX[®] 4s (spring contact version). The board can be customized allowing adaptation and optimization to the used SEMiX[®] Module. The switching characteristic of the IGBT can be influenced through user settings, e.g. changing turn-on and turn-off speed by variation of R_{Gon} and R_{Goff} . Furthermore, it is possible to adjust the monitoring level and blanking time for the DSCP (see Technical Explanations SKYPER[®] 32 R).

Please note:

This technical explanation is based on the Technical Explanations for SKYPER[®] 32 R. Please read the Technical Explanations SKYPER[®] 32 R before using the Adaptor Board.

Component Placement Layout

PIN Array

Connector X20 (ODU FLAKAFIX 511.068.803.014)	
	<p>Product information of suitable female connectors and distributor contact information is available at e.g. http://www.harting.com (part number 09 18 514 6 813).</p>

PIN	Signal	Function	Specification
X20:01	reserved		
X20:02	IF_HB_BOT	Switching signal input (BOTTOM switch)	Digital 15 V; 10 kOhm impedance; LOW = BOT switch off; HIGH = BOT switch on
X20:03	IF_nERROR_OUT	ERROR output	LOW = NO ERROR; open collector output; max. 30V / 15mA (external pull up resistor necessary)
X20:04	IF_HB_TOP	Switching signal input (TOP switch)	Digital 15 V; 10 kOhm impedance; LOW = TOP switch off; HIGH = TOP switch on
X20:05	reserved		
X20:06	reserved		
X20:07	reserved		
X20:08	IF_PWR_15P	Drive power supply	Stabilised +15V ±4%
X20:09	IF_PWR_15P	Drive power supply	Stabilised +15V ±4%
X20:10	IF_PWR_GND	GND for power supply and GND for digital signals	
X20:11	IF_PWR_GND	GND for power supply and GND for digital signals	
X20:12	reserved		
X20:13	reserved		
X20:14	reserved		

Please note:

The feature PRIM_ERROR_IN of the driver core is not available at the interface X20.

Setting Dynamic Short Circuit Protection

R_{CE} & C_{CE}			
Designation	Pattern Name	Setting	
R160	1206	R _{CE} Factory setting: not equipped	TOP
C150	1206	C _{CE} Factory setting: not equipped	TOP
R260	1206	R _{CE} Factory setting: not equipped	BOT
C250	1206	C _{CE} Factory setting: not equipped	BOT

Collector Series Resistance

R_{VCE}			
Designation	Pattern Name	Setting	
R150	MiniMELF	R _{VCE} * Factory setting: not equipped	TOP
R250	MiniMELF	R _{VCE} * Factory setting: not equipped	BOT

* 1200V IGBT operation: 0Ω
1700V IGBT operation: 1kΩ / 0,4W

Adaptation Gate Resistors

R_{Gon} & R_{Goff}			
Designation	Pattern Name	Setting	
R151, R152, R153, R154 (parallel connected)	MiniMELF	R _{Gon} Factory setting: not equipped	TOP
R155, R156, R157, R158 (parallel connected)	MiniMELF	R _{Goff} Factory setting: not equipped	TOP
R251, R252, R253, R254 (parallel connected)	MiniMELF	R _{Gon} Factory setting: not equipped	BOT
R255, R256, R257, R258 (parallel connected)	MiniMELF	R _{Goff} Factory setting: not equipped	BOT

Adaptation Decoupling Gate Resistors

For details to the decoupling gate resistors and recommended values, see Modules Explanations and Data Sheets SEMiX[®].

$R_{G1}, R_{G2}, R_{G3}, R_{G4}$			
Designation	Pattern Name	Setting	
R101	MELF	R_{G1} Factory setting: not equipped	TOP
R102	MELF	R_{G2} Factory setting: not equipped	TOP
R103	MELF	R_{G3} Factory setting: not equipped	TOP
R104	MELF	R_{G4} Factory setting: not equipped	TOP
R201	MELF	R_{G1} Factory setting: not equipped	BOT
R202	MELF	R_{G2} Factory setting: not equipped	BOT
R203	MELF	R_{G3} Factory setting: not equipped	BOT
R204	MELF	R_{G4} Factory setting: not equipped	BOT

Boost Capacitors

$C_{boost15P}$ & $C_{boost8N}$			
Designation	Pattern Name	Setting	
C151	1210	$C_{boost8N}$ Factory setting: 4,7 μ F/16V *	TOP
C152	1210	$C_{boost15P}$ Factory setting: 2,2 μ F/25V *	TOP
C251	1210	$C_{boost8N}$ Factory setting: 4,7 μ F/16V *	BOT
C252	1210	$C_{boost15P}$ Factory setting: 2,2 μ F/25V *	BOT

* output charge pulse: 5 μ C

Temperature Signal

The temperature sensor inside the SEMiX[®] module is directly connected to contacting points T1 and T2. For details to the temperature sensor, see Modules Explanations SEMiX[®].

Safety Warnings:

The contacting points T1 and T2 are not electrical isolated. Due to high voltage that may be present at the contacting points T1 and T2, some care must be taken in order to avoid accident. There is no cover or potential isolation that protect the high voltage sections / wires from accidental human contact.

Board 4s SKYPER[®] 32 R - Technical Explanations

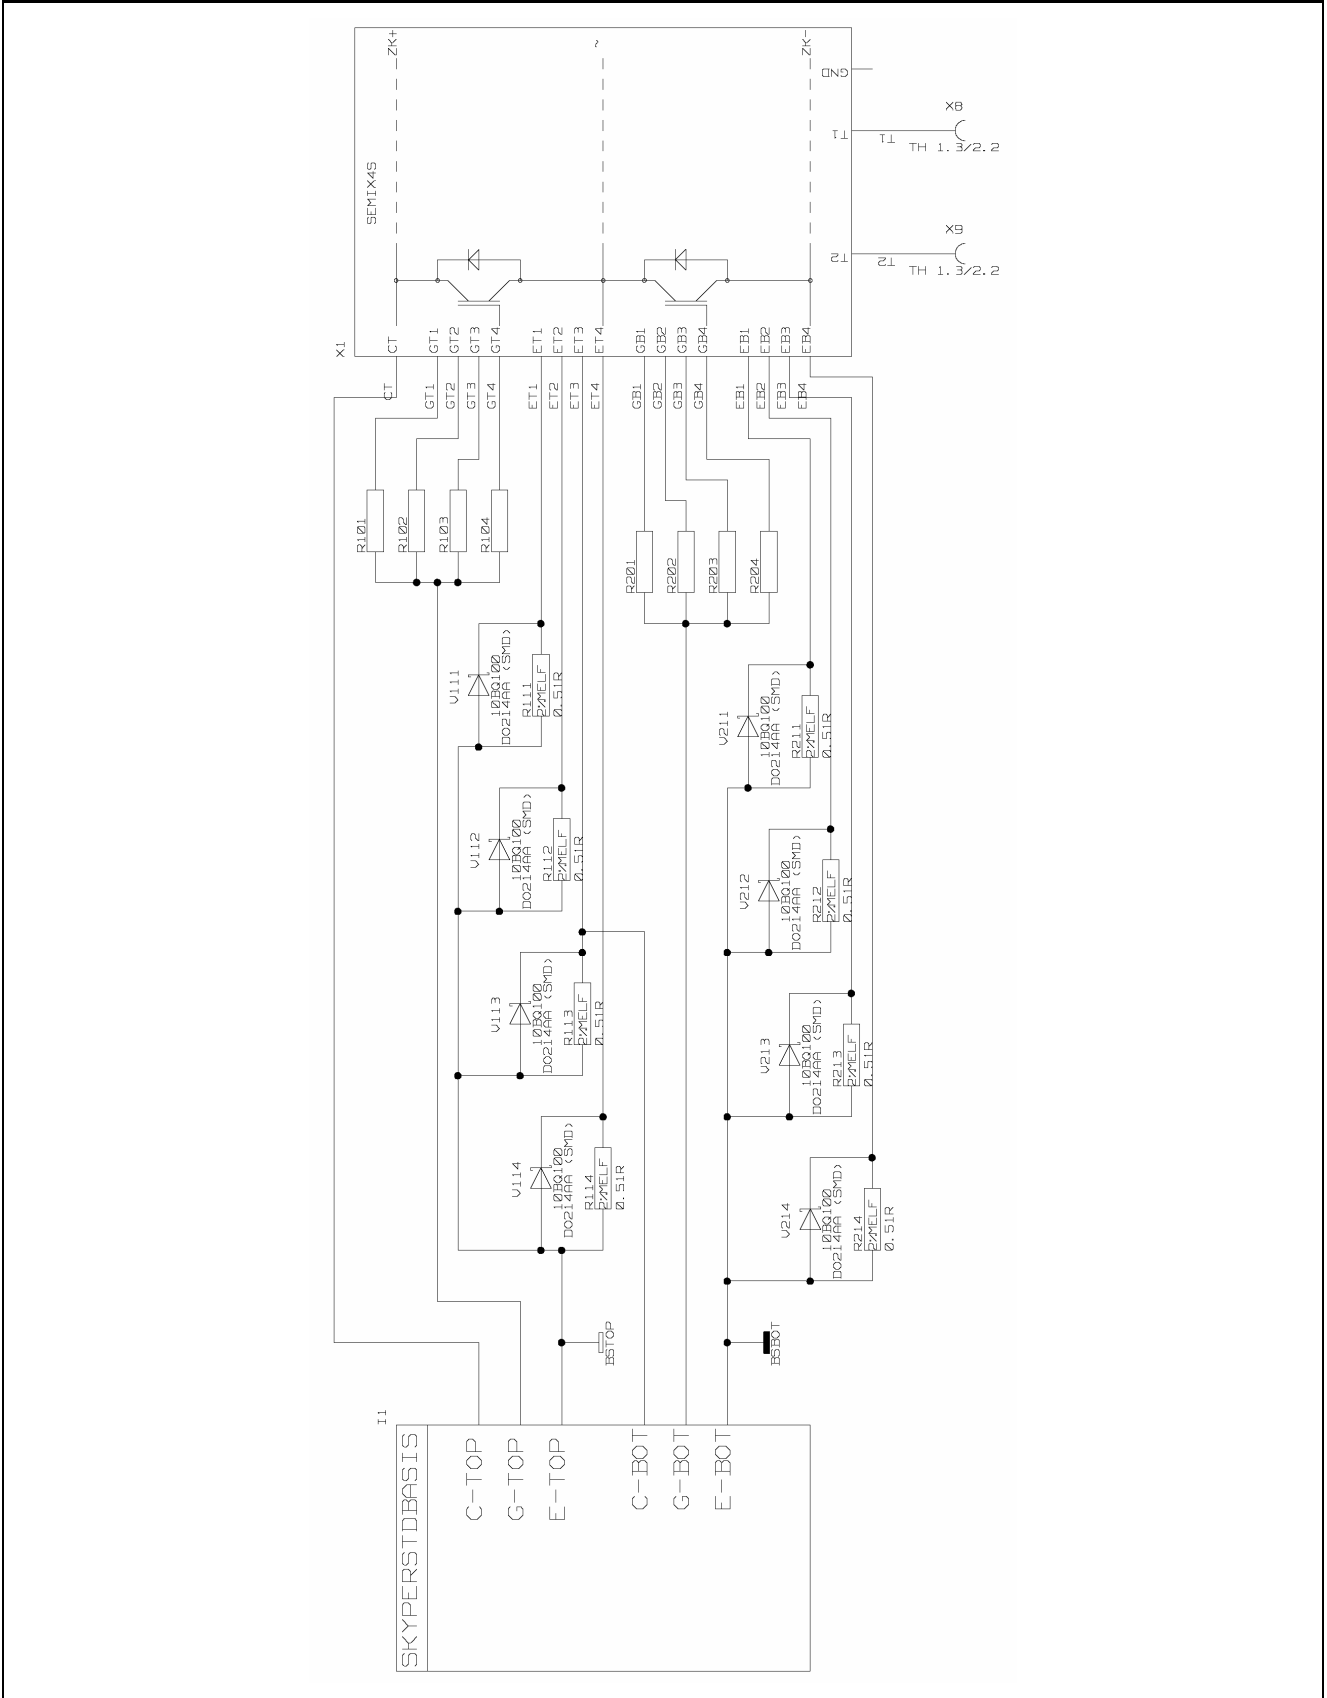

Mounting Notes

The electrical connections between adaptor board and SEMiX[®] are realised via spring contacts integrated in SEMiX[®] power modules and via landing pads on the bottom side of the adaptor board.

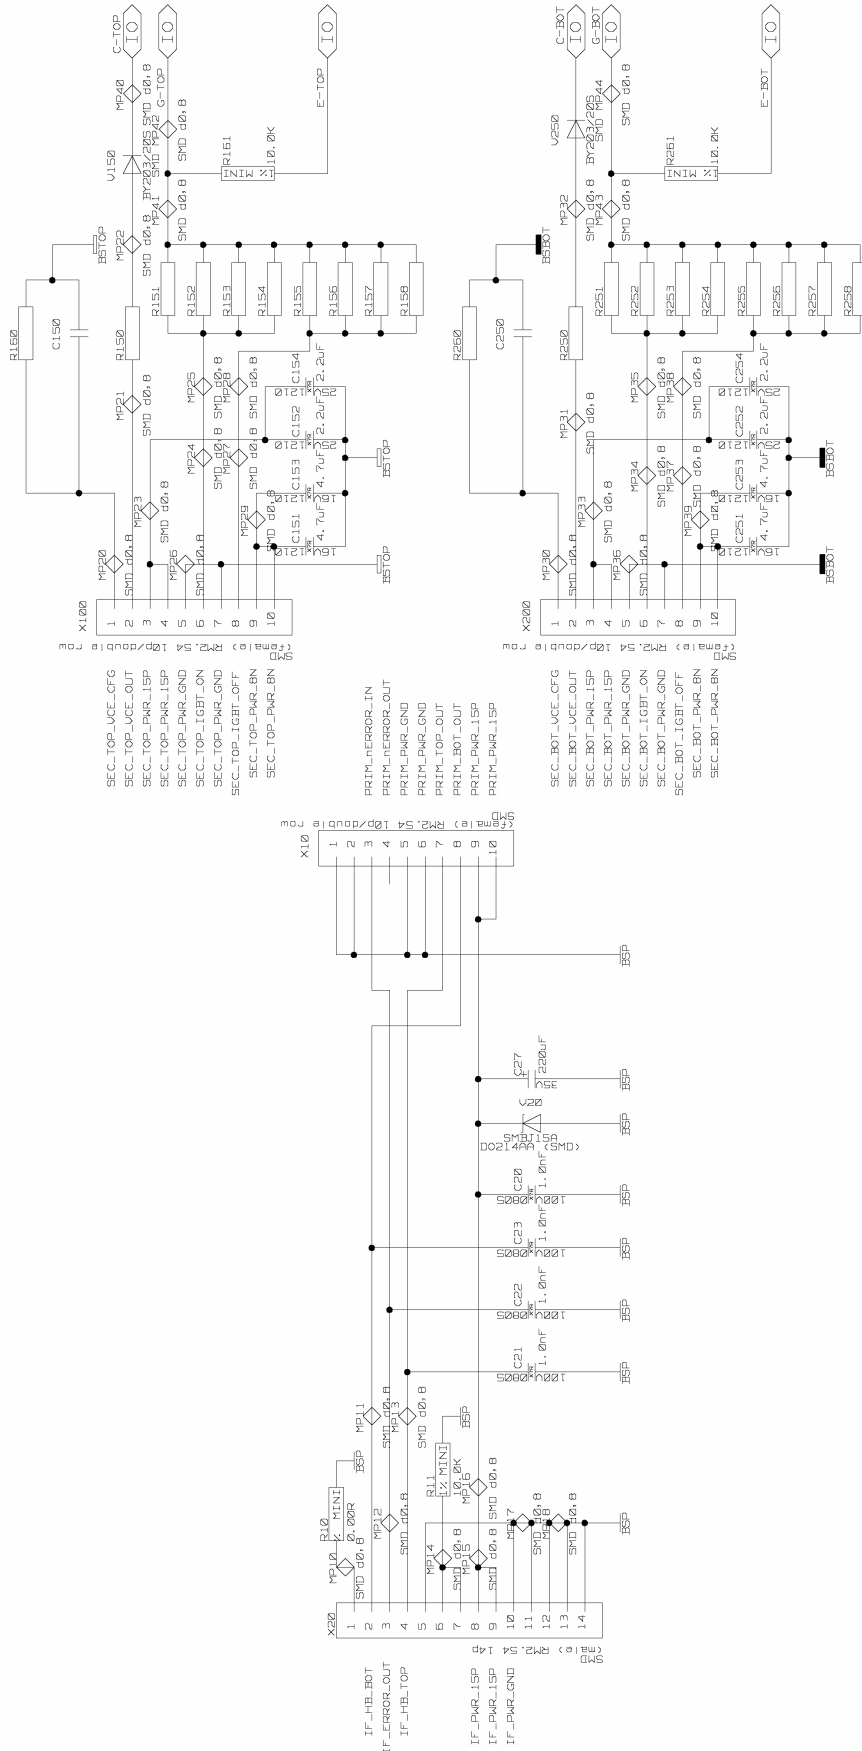

Adaptor Board & Driver Core Mounting	
	<ol style="list-style-type: none">1. Soldering of components (e.g. R_{Gon}, R_{Goff}, etc.) on adaptor board.2. Adaptor Board has to be fixed to the SEMiX[®] module (see "Mounting Instruction and Application Notes for SEMiX[®] IGBT modules" on SEMiX[®] product overview page at http://www.semikron.com).3. Insert driver core into the box connector on adaptor board.
	<p>The connection between driver core and adaptor board should be mechanical reinforced by using support posts. The posts have to be spaced between driver core and adaptor board.</p> <p>Product information of suitable support posts and distributor contact information is available at e.g. http://www.richco-inc.com (e.g. part number DLMSPM-8-01, LCBST-8-01).</p>
